1 Logistic Regression Analysis 1

The Logistic Regression Model 2

An Example 3

Coefficients for the Logistic Model 4

Interpreting the Regression Coefficients 6

Assessing the Goodness of Fit of the Model 7

Categorical Variables 11

Interaction Terms 14

Selecting Predictor Variables 14

Diagnostic Methods 19

How to Obtain a Logistic Regression Analysis 23

Selecting a Subset of Cases for Analysis 25

Defining Categorical Variables 26

Saving New Variables 27

Options 28

Additional Features Available with Command Syntax 30

2 General Factorial Analysis of Variance 31

A Simple Factorial Design 31

Where Are We? 32

Describing the Data 33

Equality of Variances 35

The Analysis-of-Variance Table 36

Full Factorial Model 37

Examining Contrasts 37

Simple Contrasts 39

The Problem of Multiple Comparisons 40

Measuring Effect Size 41

Power Computations 41

Examining Residuals 42

An Analysis-of-Covariance Model 44

Testing for Equal Slopes 45

The Analysis-of-Covariance Table 46

More Than One Factor 48

Types of Sums of Squares 48

How to Obtain a General Factorial Analysis of Variance 48

Defining Levels of Factor Variables 50

Specifying Contrasts 50

Specifying the MANOVA Model 52

Options 55

Additional Features Available with Command Syntax 56

3 Multivariate Analysis of Variance 57

Multivariate Analysis of Variance 58

Assumptions 58

One-Sample Hotelling's T^2 59

Descriptive Statistics 60

Further Displays for Checking Assumptions 61

Testing Hypotheses 67

Univariate Tests 69

The Two-Sample Multivariate T Test 69

A Multivariate Factorial Design 79

How to Obtain a Multivariate Analysis of Variance 96

Defining Levels of Factor Variables 97

Specifying Contrasts 98

Specifying the MANOVA Model 100

Options 103

Additional Features Available with Command Syntax 105

4 Repeated Measures Analysis of Variance 107

Repeated Measures 107

Describing the Data 108

Analyzing Differences 110

Testing for Differences 112

Choosing Multivariate or Univariate Results 116

Selecting Other Contrasts 117

Adding Another Factor 118

Testing Hypotheses 120

Within-Subjects and Between-Subjects Factors	124
Analysis of Covariance with a Constant Covariate	129
Doubly Multivariate Repeated Measures Designs	132
How to Obtain a Repeated Measures ANOVA	132
Doubly Multivariate Repeated Measures	133
Within-Subject Variables and Between-Subjects Factors	134
Covariates	135
Contrasts	137
Specifying the Model	139
Options	141
Additional Features Available with Command Syntax	143

5 Model Selection Loglinear Analysis 145

Loglinear Models	146
A Fully Saturated Model	146
The Independence Model	152
Hierarchical Models	156
Model Selection	157
Partitioning the Chi-square Statistic	157
Testing Individual Terms in the Model	161
Model Selection Using Backward Elimination	162
SPSS Loglinear Analysis Procedures	164
How to Obtain a Model Selection Loglinear Analysis	165
Defining Factor Ranges	166
Model Specification	166
Options	168
Additional Features Available with Command Syntax	169

6 General Loglinear Analysis 171

Voting Behavior	171
Estimating the Parameters	173
Calculating Expected Values	175
Interpreting the Parameter Estimates	175
Fitting an Unsaturated Model	177
Examining Residuals	179

Models for Ordinal Data	181
The Linear-by-Linear Association Model	183
Row- and Column-Effects Models	185
Incomplete Tables	187
Testing Real against Ideal	188
Quasi-Independence	189
Symmetry Models	190
Adjusted Quasi-Symmetry	195
An Ordinal Model for Real versus Ideal	196
Modeling Rates	198
Interpreting Parameter Estimates	200
Sampling Models	201
How to Obtain a General Loglinear Analysis	202
Model Specification	204
Options	205
Saving Residuals or Predicted Values	206
Additional Features Available with Command Syntax	207

7 Logit Loglinear Analysis 209

Crosstabulation	209
Missing Parameters	211
Parameter Estimates	213
An Unsaturated Logit Model	214
Measures of Dispersion and Association	215
Parameter Estimates	217
Polychotomous Logit Model	219
Goodness of Fit of the Model	219
Interpreting Parameter Estimates	221
Other Logit Models	224
How to Obtain a Logit Loglinear Analysis	225
Model Specification	226
Options	228
Saving Residuals or Predicted Values	229
Additional Features Available with Command Syntax	230

8 Nonlinear Regression 231

What Is a Nonlinear Model? 231

- Transforming Nonlinear Models 232
- Intrinsically Nonlinear Models 233
- Fitting the Logistic Population Growth Model 233
- Estimating Starting Values 238
- Computational Problems 240
- Additional Nonlinear Regression Options 240

How to Obtain a Nonlinear Regression Analysis 240

- Defining Model Parameters 242
- Defining a Loss Function 243
- Specifying Parameter Constraints 244
- Saving New Variables 245
- Options 245
- Additional Features Available with Command Syntax 248

9 Probit Analysis 249

Probit and Logit Response Models 249

- An Example 250
- Comparing Several Groups 253
- Comparing Relative Potencies of the Agents 255
- Estimating the Natural Response Rate 257
- More than One Stimulus Variable 257

How to Obtain a Probit Analysis 257

- Defining Factor Range 259
- Options 260
- Additional Features Available with Command Syntax 262

10 Life Tables 263

The Follow-up Life Table 263

- A Personnel Example 263
- Assumptions Needed to Use the Life Table 267
- Lost to Follow-up 268
- Plotting Survival Functions 268
- Comparing Survival Functions 269

How to Obtain Life Tables 269

- Define Event for Status Variable 271

Define Range for Factor Variable	271
Options	272
Additional Features Available with Command Syntax	273

11 Kaplan-Meier Survival Analysis 275

Kaplan-Meier Estimators	275
The SPSS Kaplan-Meier Table	277
Plotting the Cumulative Survival	279
Comparing Survival Functions	279
Stratified Comparisons of Survival Functions	282
How to Obtain a Kaplan-Meier Survival Analysis	284
Define Event for Status Variable	286
Comparing Factor Levels	286
Saving New Variables	288
Options	288
Additional Features Available with Command Syntax	289

12 Cox Regression 291

The Cox Regression Model	291
The Hazard Function	293
Multiple Covariates	295
Testing the Model	297
Selecting Predictor Variables	298
Plotting the Estimated Functions	303
Checking the Proportional Hazards Assumption	304
Time-Dependent Covariates	305
Graphical Displays	307
Looking for Influential Cases	308
Examination of Residuals	309
SPSS Cox Regression Procedures	311
How to Obtain a Time-Constant Cox Regression Analysis	311
Define Event for Status Variable	314
Defining Categorical Predictors	314
Plots	316
Saving New Variables	317
Options	318
Additional Features Available with Command Syntax	319

How to Obtain a Time-Dependent Cox Regression Analysis	320
Defining the Time-Dependent Cox Regression Model	321
Define Event for Status Variable	323
Defining Categorical Predictors	324
Saving the Change in Regression Coefficients	326
Options	326
Additional Features Available with Command Syntax	328

13 Writing Your Own Program: The Matrix Language 329

Nearest-Neighbor Discriminant Analysis	329
The Matrix Job	330
Repeated Measures Analysis of Categorical Data	334
The Matrix Job	336
Using the Matrix Language	338
Using Matrix Commands in a Syntax Window	339
