

Contents

- Contents3
- 1. Introduction5
- 2. Definitions of Basic Terms.....7
- 3. Current Possibilities of Operative Forecasts of Torrential Rainfall and Flash Floods9
- 4. Description of Methodological Procedures 11
 - 4.1 Estimating the areal distribution of soil moisture..... 11
 - 4.1.1 Determination of initial conditions for modelling..... 14
 - 4.2 Derivation of potential risk rainfall 15
 - 4.2.1 The flash flood risk and the Extremity Index..... 15
 - 4.2.2 Calculation of potential risk rainfall of a given duration..... 18
 - 4.3 Determining the actual flash flood risk in a river basin system 19
 - 4.3.1 Calculation of runoff response 20
 - 4.3.2 Wave routing..... 21
 - 4.3.3 Criterion for determining the level of the flash flood risk 22
 - 4.4 Determination of the risk of local flooding in a grid..... 22
- 5. Description of the FFI Operation 25
- 6. FFI Operation Experience..... 33
 - 6.1 Influence of input data quality and reliability..... 33
 - 6.1.1 QPE calculation 33
 - 6.1.2 Input data quality and reliability 36
 - 6.1.3 The analysis of adjusted radar QPEs as an input to the FFI..... 39
 - 6.2 Influence of initial conditions setup..... 39
 - 6.3 Assessment of FFI performance during the June 2013 flood..... 41
 - 6.4 Evaluation of the period 2017–2020..... 43
 - 6.5 FFI development..... 44
- 7. Conclusion..... 47
- 8. References 49
