ABOUT THE AUTHOR	4
1 INTRODUCTION	5
2 WHEEL-RAIL INTERFACE AS AN OPEN TRIBOLOGY SYSTEM	6
2.1 Introduction	6
2.2 Water in the wheel-rail contact	7
2.3 Leaf contamination	9
2.4 Humidity and oxidation	9
2.5 Research gaps	10
2.6 Author's contribution	10
2.6.1 Wheel-rail interface under extreme conditions	12
2.6.2 Asperity-based model for prediction of traction in water-contaminated wheel-rail contact	12
2.6.3 The low adhesion problem: The effect of environmental conditions on adhesion	13
2.6.4 The performance of top-of-rail products under water contamination	14
3 WHEEL-RAIL INTERFACE AND FRICTION MANAGEMENT	15
3.1 Introduction	15
3.2 Traction enhancement	15
3.3 Top-of-rail conditioning	16
3.4 Research gaps	16
3.5 Author's contribution	17
3.5.1 Influence of sanding parameters on adhesion recovery	18
3.5.2 Development of an adaptive top-of-rail friction modification system	19
3.5.3 Case Study: the influence of oil-based friction modifier quantity on tram braking	20
4 EXPERIMENTAL FACILITY TO STUDY THE INTERFACE	22
4.1 Introduction	22
4.2 Lab-scale experimental facility	22
4.3 Field-test facility	22
4.4 Research gaps	23
4.5 Author's contribution	23
4.5.1 Design and development of a twin disc test rig	25
4.5.2 An approach for the creep-curve assessment using a new rail tribometer	25
5 CONCLUSIONS AND FUTURE WORK	27
6 REFERENCES	28
