	<i>Preface</i>	page x
	<i>Acknowledgments</i>	xii
1	Introduction and Overview	1
1.1	What Will Be Covered	1
1.2	What Will Not Be Covered	5
1.3	Why One, Two, and More d -Dimensional Space	6
2	Modeling Polyacetylene	7
2.1	Introduction	7
2.2	Some Chemistry	8
2.3	Some Phenomenology	9
2.4	Tight-Binding Model along a Chain	11
2.5	Fermiology on the Lattice	17
2.6	Fermiology in the Continuum	31
2.7	The Peierls Instability for Polyacetylene	44
2.8	Exercises	52
3	Fractionalization in Polyacetylene	58
3.1	Introduction	58
3.2	Point Defects in the Dimerization	59
3.3	Zero Modes Bound to Topological Defects	61
3.4	A First Run at Charge Fractionalization	67
3.5	Fractionalization from Scattering Theory	78
3.6	Fractionalization from Supersymmetry	87
3.7	Fractionalization from the Gradient Expansion	120
3.8	Fractionalization from the Adiabatic Expansion	129
3.9	Fractionalization from Functional Bosonization	144
3.10	Fractionalization from Chiral Abelian Bosonization	149

3.11	Fractionalization at Nonvanishing Temperature	167
3.12	Stability with Respect to Fermion Interactions	182
3.13	Exercises	199
4	Sharpness of the Fractional Charge	247
4.1	Introduction	247
4.2	Example 1: The Double-Well Potential	248
4.3	Example 2: The Pair of Soliton and Antisoliton	265
4.4	Example 3: The Dimer State	277
4.5	Definition of Point-Like Fractional Charges	288
4.6	Exercises	294
5	From Spin-1/2 Cluster c Chains to Majorana c Chains	303
5.1	Introduction	303
5.2	Spin-1/2 Cluster c Chains	308
5.3	Symmetry Fractionalization of Spin-1/2 Cluster c Chains	325
5.4	Jordan-Wigner Transformation to the Majorana Representation	350
5.5	Majorana c Chains	354
5.6	Quantum Phase Transitions between Two Majorana c Chains	373
5.7	Symmetry Fractionalization of Majorana c Chains	381
5.8	Exercises	396
6	The Lieb-Schultz-Mattis Theorem	419
6.1	Introduction	419
6.2	The Lieb-Schultz-Mattis Theorem with a Local Twist	423
6.3	A First Extension of the Lieb-Schultz-Mattis Theorem	453
6.4	A Second Extension of the Lieb-Schultz-Mattis Theorem	484
6.5	Fermionic Invertible Topological Phases	486
6.6	Exercises	501
7	Fractionalization in Quantum Wires	516
7.1	Introduction	516
7.2	Bogoliubov-de-Gennes (BdG) Hamiltonians	518
7.3	The Tenfold Way: Altland-Zirnbauer Symmetry Classes	527
7.4	The Tenfold Way: Gaussian Ensembles	560
7.5	The Tenfold Way: Circular Ensembles	564
7.6	The Tenfold Way: Scattering or Transfer Matrix Ensembles	573
7.7	The Tenfold Way: Disordered Quantum Wires	608
7.8	The Tenfold Way: Gapped Phases of Quantum Wires	648
7.9	Exercises	664
8	The Tenfold Way: Gapped Phases in Any Dimensions	745
8.1	Introduction	745
8.2	Classifying Spaces of Normalized Dirac Masses	747
8.3	Anderson Localization and the Topology of Classifying Spaces	771

8.4	Breakdown of the Tenfold Way Due to Interactions	786
8.5	Comments and Outlook	839
8.6	Exercises	846
Appendix A Mathematical Glossary		857
