1	Introduction	1
1.1	Outline	2
1.2	Literature Overview	3
1.2.1	Line Planning	4
1.2.2	Timetabling	5
1.2.3	Vehicle Scheduling	7
1.2.4	Integration	8
1.3	Problem Definitions	10
1.3.1	Preliminaries	11
1.3.2	Preliminaries Public Transport Planning	12
1.3.3	Line Planning	12
1.3.4	Timetabling	15
1.3.5	Vehicle Scheduling	21
1.3.6	Public Transport Plan	26
1.3.7	Multi-Criteria Optimization	27
1.4	Data Sets	28
1.4.1	Data Set small	29
1.4.2	Data Set toy	29
1.4.3	Data Set grid	29
1.4.4	Data Set regional	30
1.4.5	Data Set long-distance	30
2	Integrating Timetabling and Passenger Routing	33
2.1	Modeling the Integrated Problem	33
2.2	Two Approaches for Reducing the Problem Size	38
2.2.1	Combining Shortest Path Routing with Routing Along Fixed Paths	38
2.2.2	A Preprocessing Algorithm	43
2.3	Computational Experiments	45
2.3.1	Which OD Pairs Should Be Routed?	47
2.3.2	Influence of Preprocessing and Chosen IP Formulation	48

2.3.3	Comparing Heuristic LB and Heuristic UB	48
2.3.4	Best Configuration with Bounds	50
2.3.5	Bounds for Data Set toy.....	51
2.3.6	Data Set long-distance	51
2.4	Adding Time Slices	52
2.5	A SAT Formulation with Time Slices	56
2.5.1	Modeling Feasibility.....	58
2.5.2	Objective Function.....	60
2.6	Summary	64
3	Integrating Line Planning, Timetabling, and Passenger Routing	65
3.1	Modeling the Integrated Problem	65
3.2	Extensions of the Model	69
3.3	Reducing the Problem Size	69
3.3.1	Determining which Stations Suffice for Transferring	71
3.3.2	A Preprocessing Algorithm	75
3.3.3	Routing on Fixed Paths	80
3.4	Computational Experiments	83
3.4.1	Influence of Preprocessing	84
3.4.2	Influence of Adding Fixed Passenger Routes	85
3.4.3	Influence of the Number of Routed OD Pairs	86
3.4.4	Finding Solutions for Different Preferences	88
3.5	Summary	89
4	Integrating Timetabling and Vehicle Scheduling	91
4.1	Modeling the Integrated Problem	91
4.2	Computational Experiments	96
4.3	Summary	97
5	Integrating Line Planning, Timetabling, Passenger Routing and Vehicle Scheduling	99
5.1	Modeling the Integrated Problem	99
5.1.1	Structure.....	100
5.1.2	An IP Formulation	101
5.1.3	Computational Experiments.....	105
5.2	Analysis of the Structure.....	107
5.2.1	Decompositions	108
5.2.2	Computational Experiments.....	109
5.3	Summary	116
6	Two Heuristic Approaches for Integrating Public Transport Problems	117
6.1	A Look-Ahead Heuristic.....	117
6.1.1	Look-Ahead Enhancements	118
6.1.2	Computational Experiments.....	124

6.2	An Iterative Re-Optimization Approach	128
6.2.1	Modelling the Re-Optimization Problems	128
6.2.2	Iteration Scheme	142
6.2.3	Computational Experiments	147
6.3	Summary	153
7	General Multi-Stage Problems	155
7.1	Sequential and Multi-Stage Problems	155
7.2	Price of Sequentiality	160
7.3	Relation to Integrated Public Transport Problems	168
8	Discussion and Conclusion	171
9	Outlook	175
A	Supplementary Material	177
B	Frequently Used Notations	181
	Bibliography	185
