

Contents

1	The Classical Roots of Resource Economics	1
1.1	Introduction: Why Do We Study Resource Economics?	1
1.2	The Classical Economists: Robert Malthus	2
1.3	The Classical Economists: David Ricardo	3
1.4	The Computation of Rent: Example	5
1.5	The Classical Economists: John Stuart Mill	6
2	Optimal Depletion of Exhaustible Resources	7
2.1	Introduction to Discounting	8
2.1.1	Estimating the Present Value of Investment Streams	10
2.2	Basic Concepts and an Informal Derivation of Optimal Depletion Rates	11
2.3	Formal Derivation of Optimal Depletion and the Welfare Theorem	13
2.3.1	The Planner's Problem	13
2.3.2	The Firm's Problem	15
2.4	Optimal Control*	16
2.4.1	Discounting	18
2.5	Optimal Depletion Using Optimal Control*	19
2.5.1	Efficient Allocation	19
2.5.2	Competitive Equilibrium	21
2.5.3	Equilibrium, Efficiency, and Non-convexity	22
2.6	Assumptions Underlying the Welfare Theorem	29
2.6.1	Perfect Competition	29
2.6.2	Advanced*	31
2.6.3	No Externalities	33
2.6.4	Advanced*	33
2.6.5	Private and Social Discount Rates Are the Same	34
2.6.6	Perfect Information	35
2.6.7	Anchoring the Price Path	36

2.7	Concluding Remarks on Theory	38
2.8	A Note on Empirical Verification of the Basic Model	40
2.9	(the Royalty Grows at a Rate Equal to the Rate of Interest)	40
	Numerical Examples	40
	Base Case	40
2.9.1	Unlimited Stock	41
2.9.2	No Discounting	42
2.9.3	Taxes	42
2.9.4	Expected Demand	44
2.9.5	Externalities	44
2.9.6	Substitutes	44
2.9.7	Depletion over Many Periods	45
2.9.8	Depletion over Many Periods: Continuous Time	46
2.9.9	Depletion over Many Periods: Continuous Time	46
2.9.10	Incorrectly Anticipated Stock	47
2.9.11	Incorrectly Anticipated Choke Price	48
2.10	Some Last Notes on Scarcity Rents	49
2.11	Backstop Technologies	50
	Nordhaus Energy Model and Beyond	53
3	Renewable Resources	59
3.1	Continuous Time	60
3.2	Analyses of Optimal Timber Harvesting	62
	One-Shot Harvest	63
	Repeated Harvests	64
	A Numerical Example Comparing One-Shot	64
	and Repeated Harvesting	65
	Biological "Optimum": The Maximum Sustainable	67
	Yield (MSY)	67
	The Standing Forest Has Value	70
3.3	Optimal Control of a Generic Renewable Resource*	71
4	Environmental Resources: Dynamics, Irreversibility	75
	and Option Value	75
	Introduction: The Transition from Extractive to In Situ	75
	Resources	75
4.2	Irreversibility in Economics and in Environmental Processes	77
4.3	Evaluating Irreversible Investments	79
4.4	Investment Under Uncertainty and Irreversibility	80
4.5	Computation of Option Value	82
	No Expectations of Learning	82
	Anticipating Learning	83
4.6	Application of Uncertainty and Irreversibility: Valuation	85
	and Management of Tropical Forests	85

4.6.1	A Framework for Valuation	88
4.6.2	An Illustrative Application	90
5	Resources, Growth and Sustainability	93
5.1	Resource Scarcity	94
5.1.1	Physical Measures of Scarcity	95
5.1.2	Economic Measures of Scarcity	97
5.2	Limits to Growth	110
5.3	Sustainability: An Intuitive Approach	112
5.3.1	Sustainability: A Rigorous Formulation	114
	and Preliminary Empirical Results	114
6	Climate: The Ultimate Resource?	117
6.1	Introduction	118
6.2	Climate Change Projections	121
6.3	Potential Impacts and Problems of Estimation	125
6.3.1	The Importance of Non-linearity in Modeling	126
6.3.2	Climate Change Impacts	126
	Impacts on the Environment, Extreme Events,	
	and Capital Losses	129
6.4	Discounting	131
6.5	Irreversibilities	133
6.6	Catastrophic Climate Change in Context	134
6.7	Implications for Climate Policy	138
6.8	Policy Instruments	140
	References	143
