CHAPTER 1 Epigenetics in evolution: State-of-the-art and future perspectives (Introductory chapter) 1

Carlos Guerrero-Bosagna

Introduction.....	1
A brief historical perspective on epigenetics.....	2
Conceptual influences of epigenetics on evolutionary theories.....	3
Epigenetics and speciation	8
Challenges and future developments	9
Acknowledgments.....	10
References.....	11

CHAPTER 2 The epigenetic system, evo-devo, and the Extended Evolutionary Synthesis..... 15

Gerd B. Müller

Introduction.....	15
A systems view of epigenetics	18
Developmental epigenetics.....	21
Environmental epigenetics.....	23
Inheritance epigenetics	25
Epigenetics in the Extended Evolutionary Synthesis	27
Further implications.....	32
Acknowledgments.....	33
References.....	33
Further reading.....	40

CHAPTER 3 Epigenetics as a driver of adaptive evolution.....41

Günter Vogt

Introduction.....	41
Ability of epigenetic mechanisms to produce phenotypic diversity.....	41
Epigenetic mechanisms.....	42
Stochastic and environmentally induced epimutations	43
Epigenetic variation and associated phenotypic variation in natural populations.....	46
Case studies with animals	47

Case studies with plants.....	52
Case studies with microorganisms	54
Autonomy of epigenetic variation from genetic variation.....	55
Stability, selectability, and fitness effects of epimutations and corresponding phenotypes	58
Stability of epimutations and epialleles.....	58
Selectability of epigenetically determined phenotypes.....	59
Fitness changes in epigenetically determined phenotypes.....	59
Transgenerational inheritance and genetic integration of epimutations and related phenotypes	61
Transgenerational inheritance of epigenetic marks and associated phenotypes.....	61
Integration of epigenetically determined phenotypes by the genome.....	65
Different ways how epigenetics can contribute to adaptive evolution.....	68
Stabilizing populations and reducing the risk of extinction.....	68
Consolidating genetically caused change	69
Triggering evolutionary change.....	72
Synthesis and perspectives	75
References.....	79
CHAPTER 4 Epigenetics as a mechanism for neutral and nearly neutral evolution	93
<i>Tomoko Ohta</i>	
Introduction.....	93
Brief history of the neutral and the nearly neutral theories of evolution.....	93
Epigenetics and human genome	95
Genome accessibility and chromatin	97
Discussion.....	98
References.....	100
CHAPTER 5 Generational stability of epigenetic transgenerational inheritance and role of environmental epigenetics in evolutionary biology	103
<i>Alexandra A. Korolenko and Michael K. Skinner</i>	
Modern synthesis.....	103
Epigenetic mechanisms.....	105
Epigenetic transgenerational inheritance	107

Evolution and epigenetic transgenerational inheritance.....	109
Generational stability of epigenetic transgenerational inheritance.....	112
Conclusion	113
References.....	114
CHAPTER 6 Epigenetics and genotypic variation: A transposable elements' perspective.....	119
<i>Miriam Merenciano, Anaïs Larue, Cristian Groza, Cristina Vieira, Rita Rebollo and Clément Goubert</i>	
Introduction.....	119
Studying TE epigenetics: Between challenges and breakthroughs	122
TEs as a source of genotypic variation through modulation of their epigenetic control	125
Aging promotes TE mobilization through relaxation of their epigenetic control	125
Epigenetic changes in diseases are associated with TE activity	128
Environmental and genomic stress contribute to TE mobilization.....	130
How does TE variation affect the epigenetic landscape?.....	131
Intraspecific TE insertion polymorphisms can be linked to variation in chromatin accessibility.....	131
Lineage-specific TE insertions highlight the complex relationship between genetic variation, epigenetic changes and genomic functions.....	132
Evolutionary consequences of epigenetic regulation of TEs	136
Conclusion	137
Acknowledgments.....	137
References.....	137
CHAPTER 7 A pragmatist view of heredity: Putting epigenetics in its context.....	153
<i>Mariano Martín-Villuendas</i>	
Introduction.....	153
The quest for inheritance	154
An epistemological reformulation of inheritance.....	161
Is pluralism justified? A meta-scientific problem.....	167
A pragmatist view.....	172

Conclusion	178
Acknowledgments.....	178
References.....	178
Further reading.....	185
CHAPTER 8 Epigenetics and the evolution and feralization of domestic animals.....	187
<i>Per Jensen and Dominic Wright</i>	
Part 1: General overview.....	187
Domestication—Definitions and history.....	187
Feralization—Definitions and examples.....	189
Genetics of domestication	190
The domestication syndrome	191
Epigenetics and domestication	192
Part 2: Case studies.....	194
Domestication of foxes and cross-species studies of gene expression	194
Rewinding domestication of chickens.....	195
Domestication of dogs.....	197
Feralization of chickens.....	198
Feralization of other species	200
Part 3: Mechanisms.....	201
The relationship between evolution of mutations and epigenetics	201
Genetic control of epigenetic variation	202
Part 4: The synthesis	204
The role of epigenetics in evolution as inferred from domestication and feralization.....	204
References.....	205
CHAPTER 9 Role of epigenetic molecular mechanisms in insect evolutionary innovations	217
<i>Cristian Villagra</i>	
Introduction.....	217
Epigenetic molecular mechanisms in insects.....	220
DNA methylation in insects.....	222
Histone modifications in insects	225
RNA epigenetics mechanisms.....	226
Insect wings.....	228
Insect metamorphosis	230
Insect eusociality	237

Pesticides and climate change effects	245
Conclusions	249
Acknowledgments	249
References	249
Further reading	281
CHAPTER 10 Epigenetics in fish evolution.....	283
<i>Francesc Piferrer, Eric A. Miska and Dafni Anastasiadi</i>	
Introduction	283
Epigenetics in fish sex determination, differentiation, sex reversal, and sex change	283
Epigenetics and sex determination	285
Epigenetics and sex chromosome evolution	286
Epigenetic and sex differentiation	286
Epigenetics and sex change	287
Epigenetics and sex reversal	287
Epigenetics and evolutionary transitions among sexual systems	288
Epigenetics, adaptive diversification, and speciation	288
Genetics and epigenetics of speciation	290
DNA methylation and the germline reprogramming of the epigenome	290
Transposable elements—a hotbed for epigenetic variation and speciation?	292
Other epigenetic mechanisms in speciation?	292
What comes next?	292
Fish evolution under domestication from an epigenetics perspective	294
References	298
CHAPTER 11 Evolutionary implications of epigenetic inheritance of obesity in mammals	307
<i>Flavio Palmieri, Marta Mourin-Fernandez and Josep C. Jimenez-Chillaron</i>	
Introduction: 21st-century cars do not fit in old parking slots	307
Obesity: A rapidly emerging phenotype	308
Epigenetic mechanisms in (polygenic) obesity	310
Epigenetic inheritance of obesity	312
Obesity under the scope of evolution	314
Experimental models to study the evolutionary implications of the epigenetic inheritance of obesity	318
Conclusion	320

Coda: Red cars will fly (possibly).....	321
References.....	321
CHAPTER 12 The evolution of epigenetic mechanisms in plants.....	329
<i>Vasti Thamara Juarez-Gonzalez, Claudia Cortes de Felipe and German Martinez</i>	
Introduction.....	329
DNA methylation	330
Evolution of the DNA methylation machinery and its role	332
Histone modifications in plants	339
Histone acetylation	341
Histone methylation	342
Histone variants.....	348
Conclusion	349
References.....	350
CHAPTER 13 Embodied cognition meets epigenetics: At the intersection of brain development and learning... 365	
<i>Antonella Tramacere</i>	
Introduction.....	365
Epigenetics in cellular and cognitive memory.....	368
Epigenetic memory in development and learning	370
The molecular embodiment of spatial learning.....	375
Learning as embodied development	377
Conclusion	380
Acknowledgments.....	382
References.....	382
CHAPTER 14 Responsive genome or environmental determinism?—How epigenetics resituates organism, environment, and society..... 389	
<i>Sophie Juliane Veigl</i>	
On the co-production of natural and social order.....	389
Toward new notions of genomes and environments.....	390
On the epigenization of mothering.....	392
The return of the social milieu	395
Race and racialization in epigenetic inquiry	396
Conclusion	399
References.....	401
Further reading.....	404
Index.....	405
