Introduction: what is environmental economics all about?	1
--	---

PART I ENVIRONMENTAL ECONOMICS: FOUNDATIONAL CONCEPTS, THEORIES, AND PERSPECTIVES 7

CHAPTER 1	The natural environment and the human economy: the neoclassical economic perspective 9
	Learning objectives 9
1.1	Introduction 9
1.2	The market as a provider of information on resource scarcity 11
1.3	Factor substitution, technological advances, and resource scarcity 13
1.4	The human economy and the natural world: the neoclassical worldview 16
1.5	Chapter summary 19
	Review and discussion questions 20
	References and further reading 21
CHAPTER 2	The natural environment and the human economy: an ecological perspective 23
	Learning objectives 23
2.1	Introduction 23
2.2	Ecological interdependency and its implications 25
2.3	The laws of transformation of matter-energy and their implications 30
2.4	Ecological succession and its implications 33

2.5	Humans as breakers of climaxes	37
2.6	The natural environment and the human economy: the biocentric view	41
2.7	Chapter summary	43
	Review and discussion questions	44
	References and further reading	46

CHAPTER 3 Trade-offs: economic activity versus environmental quality 48

	Learning objectives	48
3.1	Introduction	49
3.2	Ecological and technological determinants of the trade-off between economic activity and environmental quality	50
3.3	The anatomy of market failure	54
3.4	Institutional arrangements to remedy market failure	62
3.5	Chapter summary	68
	Review and discussion questions	69
	References and further reading	71

PART II THE ENVIRONMENT: POLLUTION CONTROL, POLICY INSTRUMENTS, VALUATION, AND PROJECT EVALUATION 73

CHAPTER 4 The economic theory of pollution control: the optimal level of pollution 75

	Learning objectives	75
4.1	Introduction	75
4.2	The determinants of pollution-control and pollution-damage costs	76
4.3	The optimal level of pollution	80
4.4	The optimal level of pollution: an ecological appraisal	82
4.5	Chapter summary	86
	Review and discussion questions	87
	References and further reading	89

CHAPTER 5 The economics of environmental regulations: emission standards and effluent charges 90

	Learning objectives	90
5.1	Introduction	91
5.2	Emission standards	91
5.3	Effluent charges	98

	5.4 Chapter summary	104
	Review and discussion questions	106
	References and further reading	108
CHAPTER 6	The economics of environmental regulation: transferable emission credits and the macroeconomic effects of environmental regulation	110
	Learning objectives	110
	6.1 Introduction	111
	6.2 Transferable emission credits	111
	6.3 Applying the theory: the sulfur emissions trading program in the United States	119
	6.4 Is there a trade-off between employment and environmental protection?	123
	6.5 Chapter summary	131
	Review and discussion questions	132
	References and further reading	135
CHAPTER 7	Economic valuation of environmental goods and services	138
	Learning objectives	138
	7.1 Introduction	138
	7.2 Valuation of environmental amenities and avoided damage: the methodological issue	139
	7.3 Alternative methods for eliciting willingness to pay for environmental goods and services: revealed preference valuation methods	142
	7.4 Methods for eliciting willingness to pay for environmental goods and services: stated preference valuation methods	153
	7.5 The standard economic approach to environmental valuation: a critical assessment	162
	7.6 Chapter summary	165
	Review and discussion questions	166
	References and further reading	169
CHAPTER 8	Frameworks for the economic appraisal of environmental projects: cost–benefit analysis and others	172
	Learning objectives	172
	8.1 Introduction	173
	8.2 The welfare foundation of cost–benefit analysis	175
	8.3 The net present value criterion	176

8.4	Private versus public project appraisal	178
8.5	Discounting and intergenerational equity	184
8.6	Other environmental project evaluation criteria	186
8.7	Chapter summary	193
	Review and discussion questions	195
	References and further reading	198

PART III CLIMATE CHANGE: THE NEW ENVIRONMENTAL REALITY 201

CHAPTER 9	The economics of climate change	203
	Learning objectives	203
9.1	Introduction	204
9.2	The science behind climate change and its impacts	205
9.3	The economics of global warming: basic concepts and a theoretical framework for policy guidance	217
9.4	Toward the formulation of internationally binding GHG emissions targets: the United Nations Framework Convention on Climate Change	226
9.5	Chapter summary	236
	Review and discussion questions	238
	References and further reading	241

PART IV THE PERENNIAL DEBATES ON THE BIOPHYSICAL LIMITS TO ECONOMIC GROWTH AND THE EMERGING PARADIGM OF SUSTAINABLE DEVELOPMENT 245

CHAPTER 10	Biophysical limits to economic growth: Malthusian perspectives	247
	Learning objectives	247
10.1	Introduction	247
10.2	Population, resource scarcity, and limits to growth: the simple Malthusian model	249
10.3	Population, the environment, technology, and limits to growth: the neo-Malthusian variation	253
10.4	Biophysical limits on growth and the concept of optimal scale: the ecological economics variation	263
10.5	Chapter summary	268
	Review and discussion questions	269
	References and further reading	271

CHAPTER 11	Biophysical limits to economic growth: the neoclassical economic perspective	274
	Learning objectives	274
	11.1 Introduction	274
	11.2 Increasing resource scarcity: the empirical evidence	276
	11.3 Economic growth and the environment: the environmental Kuznets curve	284
	11.4 Economic growth and population	293
	11.5 Chapter summary	298
	Review and discussion questions	300
	References and further reading	302
CHAPTER 12	The economics of sustainability	307
	Learning objectives	307
	12.1 Introduction: from limits to growth debate to sustainability	307
	12.2 Sustainable development: a helpful term or a vague and analytically empty concept?	310
	12.3 The neoclassical approach to sustainability: weak sustainability	312
	12.4 The ecological economic approach to sustainability: strong sustainability	317
	12.5 The safe minimum standard approach to sustainability	320
	12.6 Chapter summary	321
	Review and discussion questions	323
	References and further reading	324
CHAPTER 13	Green accounting and alternative indicators of sustainability	327
	Learning objectives	327
	13.1 Introduction	328
	13.2 Environmentally adjusted system of national income accounting	328
	13.3 Environmentally adjusted “sustainable” national income accounting	332
	13.4 Indicators of economic and environmental sustainability	335
	13.5 Physical indicator of sustainability: ecological footprint	344
	13.6 Chapter summary	349
	Review and discussion questions	352
	References and further reading	355
CHAPTER 14	The business case for environmental sustainability	358
	Learning objectives	358
	14.1 Introduction	358

14.2	Eco-efficiency: business response to sustainability	359
14.3	Eco-effectiveness: a shift from linear to cyclical thinking	367
14.4	Eco-effectiveness: as a vision of sustainable business practice	374
14.5	Chapter summary	381
	Review and discussion questions	383
	References and further reading	385

Appendix A: Resource scarcity, economic efficiency, and markets: how the invisible hand works 388

Appendix B: The development of ecological economics: a brief historical sketch 401
