Letter from the Director	ii
Key features of neglected tropical diseases	v
Successes at a glance	vi
Neglected tropical diseases	1
A symptom of poverty and disadvantage	3
Overlapping threats to neglected populations	4
The poorest of the poor: the victims of neglected tropical diseases	6
The high price of neglect	8
Zoonotic diseases and human health: the need for integrated control	10
Sound reasons for being optimistic	13
Hidden successes	17
Part I: Local successes and the need to scale up	17
Chagas disease elimination: raising the stakes	18
Schistosomiasis control: significant scale-up in Madagascar and Nigeria	20
Soil-transmitted helminthiasis: Cambodia reaches 2010 global target ahead of time	22
Eliminating lymphatic filariasis: exemplary performance in Sri Lanka	24
Leprosy: Sri Lanka triumphs through social marketing	26
Part II: Dramatic achievements and tremendous potential	29
Buruli ulcer: from mystery to visibility	30
Dengue and dengue haemorrhagic fever: cause for major public health concern	32
Dracunculiasis (guinea-worm disease): the last lap	34
Fascioliasis: triumphing through donated triclabendazole	36
Human African trypanosomiasis: better hope for disease management	38
Leprosy: poised for elimination	40
Lymphatic filariasis: towards defeat through rapid-impact interventions	42
Onchocerciasis: control is an ongoing success story	44
Rabies: prevention in animals saves human lives	46
Trachoma: aggressive campaign in Morocco promises elimination of the disease	48
Emerging opportunities	51
Empowering people: key challenges	52
Vicious cycle of poverty: the need to act now	54
WHO Department of Control of Neglected Tropical Diseases	56
Special thanks	59
