Preface to the Second Edition xvii

Preface to the First Edition xxi

List of Abbreviations xxiii

1 Introduction to Electroencephalography 1

1.1 Introduction 1

1.2 History 2

1.3 Neural Activities 5

1.4 Action Potentials 6

1.5 EEG Generation 8

1.6 The Brain as a Network 12

1.7 Summary 12

References 13

2 EEG Waveforms 15

2.1 Brain Rhythms 15

2.2 EEG Recording and Measurement 18

2.2.1 Conventional Electrode Positioning 21

2.2.2 Unconventional and Special Purpose EEG Recording Systems 24

2.2.3 Invasive Recording of Brain Potentials 26

2.2.4 Conditioning the Signals 27

2.3 Sleep 28

2.4 Mental Fatigue 30

2.5 Emotions 30

2.6 Neurodevelopmental Disorders 31

2.7 Abnormal EEG Patterns 32

2.8 Ageing 33

2.9 Mental Disorders 34

2.9.1 Dementia 34

2.9.2 Epileptic Seizure and Nonepileptic Attacks 35

2.9.3 Psychiatric Disorders 39

2.9.4	External Effects	40	4.5.3	Ambiguity Function and the Wigner-Ville Distribution	96
2.10	Summary	41	4.6	Empirical Mode Decomposition	100
	References	42	4.7	Coherency, Multivariate Autoregressive Modelling, and Directed Transfer Function	101
3	EEG Signal Modelling	47	4.8	Filtering and Denoising	104
3.1	Introduction	47	4.9	Principal Component Analysis	107
3.2	Physiological Modelling of EEG Generation	47	4.9.1	Singular Value Decomposition	108
3.2.1	Integrate-and-Fire Models	49	4.10	Summary	110
3.2.2	Phase-Coupled Models	49		References	110
3.2.3	Hodgkin-Huxley Model	51	5	EEG Signal Decomposition	115
3.2.4	Morris-Lecar Model	54	5.1	Introduction	115
3.3	Generating EEG Signals Based on Modelling the Neuronal Activities	57	5.2	Singular Spectrum Analysis	115
3.4	Mathematical Models Derived Directly from the EEG Signals	61	5.2.1	Decomposition	116
3.4.1	Linear Models	61	5.2.2	Reconstruction	117
3.4.1.1	Prediction Method	61	5.3	Multichannel EEG Decomposition	118
3.4.1.2	Prony's Method	62	5.3.1	Independent Component Analysis	118
3.4.2	Nonlinear Modelling	64	5.3.2	Instantaneous BSS	122
3.4.3	Gaussian Mixture Model	66	5.3.3	Convolutional BSS	126
3.5	Electronic Models	67	5.3.3.1	General Applications	127
3.5.1	Models Describing the Function of the Membrane	67	5.3.3.2	Application of Convolutional BSS to EEG	128
3.5.1.1	Lewis Membrane Model	68	5.4	Sparse Component Analysis	129
3.5.1.2	Roy Membrane Model	68	5.4.1	Standard Algorithms for Sparse Source Recovery	130
3.5.2	Models Describing the Function of a Neuron	68	5.4.1.1	Greedy-Based Solution	130
3.5.2.1	Lewis Neuron Model	68	5.4.1.2	Relaxation-Based Solution	131
3.5.2.2	The Harmon Neuron Model	71	5.4.2	k-Sparse Mixtures	131
3.5.3	A Model Describing the Propagation of the Action Pulse in an Axon	72	5.5	Nonlinear BSS	133
3.5.4	Integrated Circuit Realizations	72	5.6	Constrained BSS	134
3.6	Dynamic Modelling of Neuron Action Potential Threshold	72	5.7	Application of Constrained BSS; Example	135
3.7	Summary	73	5.8	Multiway EEG Decompositions	136
	References	73	5.8.1	Tensor Factorization for BSS	139
4	Fundamentals of EEG Signal Processing	77	5.8.2	Solving BSS of Nonstationary Sources Using Tensor Factorization	143
4.1	Introduction	77	5.9	Tensor Factorization for Underdetermined Source Separation	149
4.2	Nonlinearity of the Medium	78	5.10	Tensor Factorization for Separation of Convolutional Mixtures in the Time Domain	153
4.3	Nonstationarity	79	5.11	Separation of Correlated Sources via Tensor Factorization	153
4.4	Signal Segmentation	80	5.12	Common Component Analysis	154
4.5	Signal Transforms and Joint Time-Frequency Analysis	83	5.13	Canonical Correlation Analysis	154
4.5.1	Wavelet Transform	87	5.14	Summary	155
4.5.1.1	Continuous Wavelet Transform	87		References	155
4.5.1.2	Examples of Continuous Wavelets	89	6	Chaos and Dynamical Analysis	165
4.5.1.3	Discrete-Time Wavelet Transform	89	6.1	Introduction to Chaos and Dynamical Systems	165
4.5.1.4	Multiresolution Analysis	90	6.2	Entropy	166
4.5.1.5	Wavelet Transform Using Fourier Transform	93	6.3	Kolmogorov Entropy	166
4.5.1.6	Reconstruction	94			
4.5.2	Synchro-Squeezed Wavelet Transform	95			

6.4	Multiscale Fluctuation-Based Dispersion Entropy	167
6.5	Lyapunov Exponents	167
6.6	Plotting the Attractor Dimensions from Time Series	169
6.7	Estimation of Lyapunov Exponents from Time Series	169
6.7.1	Optimum Time Delay	172
6.7.2	Optimum Embedding Dimension	172
6.8	Approximate Entropy	173
6.9	Using Prediction Order	174
6.10	Summary	175
	References	175
7	Machine Learning for EEG Analysis	177
7.1	Introduction	177
7.2	Clustering Approaches	181
7.2.1	k-Means Clustering Algorithm	181
7.2.2	Iterative Self-Organizing Data Analysis Technique	183
7.2.3	Gap Statistics	183
7.2.4	Density-Based Clustering	184
7.2.5	Affinity-Based Clustering	184
7.2.6	Deep Clustering	184
7.2.7	Semi-Supervised Clustering	185
7.2.7.1	Basic Semi-Supervised Techniques	185
7.2.7.2	Deep Semi-Supervised Techniques	186
7.2.8	Fuzzy Clustering	186
7.3	Classification Algorithms	187
7.3.1	Decision Trees	188
7.3.2	Random Forest	189
7.3.3	Linear Discriminant Analysis	190
7.3.4	Support Vector Machines	191
7.3.5	k-Nearest Neighbour	199
7.3.6	Gaussian Mixture Model	200
7.3.7	Logistic Regression	200
7.3.8	Reinforcement Learning	201
7.3.9	Artificial Neural Networks	201
7.3.9.1	Deep Neural Networks	203
7.3.9.2	Convolutional Neural Networks	205
7.3.9.3	Autoencoders	207
7.3.9.4	Variational Autoencoder	208
7.3.9.5	Recent DNN Approaches	209
7.3.9.6	Spike Neural Networks	210
7.3.9.7	Applications of DNNs to EEG	212
7.3.10	Gaussian Processes	212
7.3.11	Neural Processes	213
7.3.12	Graph Convolutional Networks	213
7.3.13	Naïve Bayes Classifier	213

7.3.14	Hidden Markov Model	214
7.3.14.1	Forward Algorithm	216
7.3.14.2	Backward Algorithm	216
7.3.14.3	HMM Design	216
7.4	Common Spatial Patterns	218
7.5	Summary	222
	References	223
8	Brain Connectivity and Its Applications	235
8.1	Introduction	235
8.2	Connectivity through Coherency	238
8.3	Phase-Slope Index	240
8.4	Multivariate Directionality Estimation	240
8.4.1	Directed Transfer Function	241
8.4.2	Direct DTF	242
8.4.3	Partial Directed Coherence	243
8.5	Modelling the Connectivity by Structural Equation Modelling	243
8.6	Stockwell Time-Frequency Transform for Connectivity Estimation	246
8.7	Inter-Subject EEG Connectivity	247
8.7.1	Objectives	247
8.7.2	Technological Relevance	247
8.8	State-Space Model for Estimation of Cortical Interactions	249
8.9	Application of Cooperative Adaptive Filters	251
8.9.1	Use of Cooperative Kalman Filter	253
8.9.2	Task-Related Adaptive Connectivity	254
8.9.3	Diffusion Adaptation	255
8.9.4	Brain Connectivity for Cooperative Adaptation	256
8.9.5	Other Applications of Cooperative Learning and Brain Connectivity Estimation	257
8.10	Graph Representation of Brain Connectivity	258
8.11	Tensor Factorization Approach	259
8.12	Summary	262
	References	263
9	Event-Related Brain Responses	269
9.1	Introduction	269
9.2	ERP Generation and Types	269
9.2.1	P300 and its Subcomponents	273
9.3	Detection, Separation, and Classification of P300 Signals	274
9.3.1	Using ICA	275
9.3.2	Estimation of Single-Trial Brain Responses by Modelling the ERP Waveforms	277
9.3.3	ERP Source Tracking in Time	278
9.3.4	Time-Frequency Domain Analysis	280
9.3.5	Application of Kalman Filter	284

9.3.6	Particle Filtering and its Application to ERP Tracking	286	11.6	Intracranial and Joint Scalp–Intracranial Recordings for IED Detection	384
9.3.7	Variational Bayes Method	291	11.6.1	Introduction to IED	384
9.3.8	Prony's Approach for Detection of P300 Signals	293	11.6.2	iEED-Times IED Detection from Scalp EEG	386
9.3.9	Adaptive Time–Frequency Methods	297	11.6.3	A Multiview Approach to IED Detection	391
9.4	Brain Activity Assessment Using ERP	298	11.6.4	Coupled Dictionary Learning for IED Detection	391
9.5	Application of P300 to BCI	299	11.6.5	A Deep Learning Approach to IED Detection	392
9.6	Summary	300	11.7	Fusion of EEG–fMRI Data for Seizure Prediction	396
	References	301	11.8	Summary	398
				References	399
10	Localization of Brain Sources	307	12	Sleep Recognition, Scoring, and Abnormalities	407
10.1	Introduction	307	12.1	Introduction	407
10.2	General Approaches to Source Localization	308	12.1.1	Definition of Sleep	407
10.2.1	Dipole Assumption	309	12.1.2	Sleep Disorder	408
10.3	Head Model	311	12.2	Stages of Sleep	409
10.4	Most Popular Brain Source Localization Approaches	313	12.2.1	NREM Sleep	409
10.4.1	EEG Source Localization Using Independent Component Analysis	313	12.2.2	REM Sleep	411
10.4.2	MUSIC Algorithm	313	12.3	The Influence of Circadian Rhythms	414
10.4.3	LORETA Algorithm	317	12.4	Sleep Deprivation	415
10.4.4	FOCUSS Algorithm	318	12.5	Psychological Effects	416
10.4.5	Standardized LORETA	319	12.6	EEG Sleep Analysis and Scoring	416
10.4.6	Other Weighted Minimum Norm Solutions	320	12.6.1	Detection of the Rhythmic Waveforms and Spindles Employing Blind Source Separation	416
10.4.7	Evaluation Indices	323	12.6.2	Time–Frequency Analysis of Sleep EEG Using Matching Pursuit	417
10.4.8	Joint ICA–LORETA Approach	323	12.6.3	Detection of Normal Rhythms and Spindles Using Higher-Order Statistics	421
10.5	Forward Solutions to the Localization Problem	325	12.6.4	Sleep Scoring Using Tensor Factorization	423
10.5.1	Partially Constrained BSS Method	325	12.6.5	Application of Neural Networks	425
10.5.2	Constrained Least-Squares Method for Localization of P3a and P3b	326	12.6.6	Model-Based Analysis	426
10.5.3	Spatial Notch Filtering Approach	328	12.7	Detection and Monitoring of Brain Abnormalities during Sleep by EEG and Multimodal PSG Analysis	428
10.6	The Methods Based on Source Tracking	333	12.7.1	Analysis of Sleep Apnoea	428
10.6.1	Deflation Beamforming Approach for EEG/MEG Multiple Source Localization	333	12.7.2	EEG and Fibromyalgia Syndrome	431
10.6.2	Hybrid Beamforming – Particle Filtering	336	12.7.3	Sleep Disorders of Neonates	431
10.7	Determination of the Number of Sources from the EEG/MEG Signals	337	12.8	Dreams and Nightmares	432
10.8	Other Hybrid Methods	340	12.9	EEG and Consciousness	433
10.9	Application of Machine Learning for EEG/MEG Source Localization	340	12.10	Functional Brain Connectivity for Sleep Analysis	433
10.10	Summary	342	12.11	Summary	434
	References	343		References	435
11	Epileptic Seizure Prediction, Detection, and Localization	351	13	EEG-Based Mental Fatigue Monitoring	441
11.1	Introduction	351	13.1	Introduction	441
11.2	Seizure Detection	357	13.2	Feature-Based Machine Learning Approaches	443
11.2.1	Adult Seizure Detection from EEGs	357	13.2.1	Hidden Markov Model Application	443
11.2.2	Detection of Neonatal Seizure	363	13.2.2	Kernel Principal Component Analysis and Hidden Markov Model	444
11.3	Chaotic Behaviour of Seizure EEG	366	13.2.3	Regression-Based Fatigue Estimation	444
11.4	Seizure Detection from Brain Connectivity	369			
11.5	Prediction of Seizure Onset from EEG	369			

3.2.4	Regularized Regression	445
3.2.5	Other Feature-Based Approaches	445
3.3	Measurement of Brain Synchronization and Coherency	446
3.3.1	Linear Measure of Synchronization	446
3.3.2	Nonlinear Measure of Synchronization	448
3.4	Evaluation of ERP for Mental Fatigue	451
3.5	Separation of P3a and P3b	457
3.6	A Hybrid EEG-ERP-Based Method for Fatigue Analysis Using an Auditory Paradigm	463
3.7	Assessing Mental Fatigue by Measuring Functional Connectivity	465
3.8	Deep Learning Approaches for Fatigue Evaluation	472
3.9	Summary	474
	References	474
4	EEG-Based Emotion Recognition and Classification	479
4.1	Introduction	479
4.1.1	Theories and Emotion Classification	480
4.1.2	The Physiological Effects of Emotions	482
4.1.3	Psychology and Psychophysiology of Emotion	485
4.1.4	Emotion Regulation	487
4.1.4.1	Agency and Intentionality	490
4.1.4.2	Norm Violation	490
4.1.4.3	Guilt	491
4.1.4.4	Shame	491
4.1.4.5	Embarrassment	491
4.1.4.6	Pride	491
4.1.4.7	Indignation and Anger	491
4.1.4.8	Contempt	491
4.1.4.9	Pity and Compassion	492
4.1.4.10	Awe and Elevation	492
4.1.4.11	Gratitude	492
4.1.5	Emotion-Provoking Stimuli	492
4.2	Effect of Emotion on the Brain	494
4.2.1	ERP Change Due to Emotion	494
4.2.2	Changes of Normal Brain Rhythms with Emotion	497
4.2.3	Emotion and Lateral Brain Engagement	498
4.2.4	Perception of Odours and Emotion: Why Are They Related?	498
4.3	Emotion-Related Brain Signal Processing and Machine Learning	499
4.3.1	Evaluation of Emotion Based on the Changes in Brain Rhythms	500
4.3.2	Brain Asymmetry and Connectivity for Emotion Evaluation	501
4.3.3	Changes in ERPs for Emotion Recognition	504
4.3.4	Combined Features for Emotion Analysis	504
4.4	Other Physiological Measurement Modalities Used for Emotion Study	507
4.5	Applications	510
4.6	Pain Assessment Using EEG	510

14.7	Emotion Elicitation and Induction through Virtual Reality	512
14.8	Summary	513
	References	514
15	EEG Analysis of Neurodegenerative Diseases	525
15.1	Introduction	525
15.2	Alzheimer's Disease	527
15.2.1	Application of Brain Connectivity Estimation to AD and MCI	528
15.2.2	ERP-Based AD Monitoring	532
15.2.3	Other Approaches to EEG-Based AD Monitoring	532
15.3	Motor Neuron Disease	537
15.4	Parkinson's Disease	537
15.5	Huntington's Disease	541
15.6	Prion Disease	542
15.7	Behaviour Variant Frontotemporal Dementia	544
15.8	Lewy Body Dementia	545
15.9	Summary	545
	References	546
16	EEG As A Biomarker for Psychiatric and Neurodevelopmental Disorders	551
16.1	Introduction	551
16.1.1	History	551
16.1.1.1	Different Psychiatric and Neurodevelopmental Disorders	553
16.1.1.2	NDD Diagnosis	554
16.2	EEG Analysis for Different NDDs	554
16.2.1	ADHD	554
16.2.1.1	ADHD Symptoms and Possible Treatment	554
16.2.1.2	EEG-Based Diagnosis of ADHD	555
16.2.2	ASD	559
16.2.2.1	ASD Symptoms and Possible Treatment	559
16.2.2.2	EEG-Based Diagnosis of ASD	560
16.2.3	Mood Disorder	561
16.2.3.1	EEG for Monitoring Depression	562
16.2.3.2	EEG for Monitoring Bipolar Disorder	564
16.2.4	Schizophrenia	565
16.2.4.1	Schizophrenia Symptoms and Management	565
16.2.4.2	EEG as the Biomarker for Schizophrenia	566
16.2.5	Anxiety (and Panic) Disorder	568
16.2.5.1	Definition and Symptoms	568
16.2.5.2	EEG for Assessing Anxiety	569
16.2.6	Insomnia	571
16.2.6.1	Symptoms of Insomnia	571
16.2.6.2	EEG for Insomnia Analysis	572
16.2.7	Schizotypal Personality Disorder	572
16.2.7.1	What Is Schizotypal Disorder?	572
