

CONTENTS

Author's note	11
Introduction to computer science and basic concepts of computer technology	12
Example: Explain the function of registers in a processor.	13
Exercise: Identify the basic components of a computer and their function.	14
Numerical representation of data using bits	16
Example: Convert between decimal and binary systems.	17
Converting from decimal to binary systems	18
Example: Let's convert a decimal number	18
Converting from binary to decimal systems	18
Example: Let's convert a binary number	18
More examples	18
Exercise: Convert a specific number from decimal to binary and back.	20
Conversion from Decimal to Binary	20
Conversion from Binary to Decimal	21
Block Diagram of Von Neumann Computer Architecture	22
Example: Draw a block diagram of Von Neumann architecture.	24
Exercise: Describe how a computer would process a simple program in the style of Von Neumann architecture.	26
Basic Components of Von Neumann Architecture	26
Processing a Simple Program	26
Example of Instruction Processing	27
Advantages and Disadvantages of Von Neumann Architecture	27
Development of Computers from Generation Zero to Generation Four	28
Generation Zero: Mechanical Computing Machines	29
First Generation: Vacuum Tube Computers	29
Second Generation: Transistor Computers	30
Third Generation: Integrated Circuits	31
Fourth Generation: Microprocessors	31
Example: Comparing the Features of Early Computers with Modern Systems.	32
Architecture	32
Performance	32
Energy efficiency	33
Functionality	33
Exercise: Create a timeline of computer development and assign key events to each generation.	34
Microprocessors: principles, clock synchronization	36
Example: Explain how an instruction processing cycle in a microprocessor works.	37
Example: Describe the instruction processing cycle on a specific processor.	39
Machine and source code, compilers, registers	40
Example: Example of a simple program in source code and its translation into machine code	42
Compilation	42
Machine code	43
Examples and explanations of terms	43
Example: Translate a simple program from a higher-level programming language into machine code	43

Overclocking and Underclocking of Microprocessors	46
Example: Changing the frequency of the processor and its impact on performance.	47
Overclocking the processor	47
Underclocking the processor	48
Impact on performance	48
Security aspects	48
Exercise: State the advantages and disadvantages of overclocking and underclocking in different scenarios.	48
Development of microprocessors and their historical variants	50
Example: Comparing the architecture of the Intel 8086 and the modern ARM processor.	51
Intel 8086 Processor	51
Modern ARM Processor	52
Comparison and Conclusion	52
Exercise: Find out the differences between CISC and RISC architectures using the example of Intel and ARM processors	53
CISC Architecture	53
RISC Architecture	54
Comparison of Intel and ARM Processors	54
Basic parts of a personal computer (PC)	56
Processor (CPU)	58
Operating memory (RAM)	59
Motherboard (Motherboard)	60
Bus	61
CPU sockets	61
Integrated components	62
Choosing a motherboard	62
Graphics card (GPU)	62
Usage of graphics cards	63
Graphics card manufacturers	63
Graphics card buses	63
Technical specifications	63
Hard disk and storage media (HDD/SSD)	63
FDD (Floppy disk drive)	63
ZIP	64
HDD (Hard disk drive)	64
SSD (Solid state drive)	65
CD-ROM (Compact disk read-only memory)	65
Controllers	66
PATA (Parallel ATA)	66
SATA (Serial ATA)	66
SCSI (Small computer system interface)	66
Power supply (PSU)	67
Cooling	67
Case	68
Types of computer cases	68
Tower	68
Desktop	69
Rackmount	69
SFF (Small Form Factor)	69
Choosing the right case	69
Expansion cards	70

Sound cards	70
Network cards	71
Peripherals	71
Server computers	72
Single-Chip Computers	74
Arduino	75
Using Arduino	76
Programming Arduino	76
Types of Arduino Boards	76
Modules and Extensions	77
Raspberry Pi	77
PIC and ATMEL Microcontroller	79
Mobile Hardware: Laptops, Netbooks, Smartphones	82
Example: Comparing Performance and Power Consumption Between a Smartphone and a Notebook	83
Exercise: Develop an Overview of Key Design Differences Between Mobile and Desktop Hardware	85
Computer Peripherals	88
Example: Demonstrate the Differences Between a Laser and Inkjet Printer	89
Exercise: Identify the Advantages and Disadvantages of Each Type of Printer	91
Computer Power: Switching Power Supplies	94
Example: How a Switching Power Supply Works and Its Role in a Computer	95
Exercise: List Scenarios in Which It is Beneficial to Use UPS and Backup Batteries	96
Data Security, RAID, data backup	98
NAS data storage	100
SAN data storage	101
File systems used on HDDs and SSDs	103
NTFS (New Technology File System)	103
exFAT (Extended File Allocation Table)	103
HFS+ and APFS (Apple File System)	103
ext4 (Fourth Extended Filesystem)	103
Btrfs (B-Tree File System)	103
ZFS (Zettabyte File System)	103
Example: Configuring RAID 1-6 and RAID 10.	104
RAID 1: Mirroring	104
RAID 2: Bit-level Striping with Hamming Code	104
RAID 3: Byte-level Striping with Dedicated Parity	104
RAID 4: Block-level Striping with Dedicated Parity	104
RAID 5: Block-level Striping with Distributed Parity	104
RAID 6: Block-level Striping with Double Distributed Parity	104
RAID 10: Combination of RAID 1 and RAID 0	106
Exercise: List the advantages and disadvantages of different RAID levels	106
Practical skills: diagnosing, repairing, and maintaining computers	108
Example: Diagnosing an unstable system due to overheating	110
Exercise: Develop a procedure for diagnosing a non-functioning printer	110
1. Physical inspection	110
2. Software and driver inspection	111
3. Network connections	111

4. Hardware problems	111
5. Additional solutions and support	111
Hardware used in computer networks (Network hardware)	112
OSI Model	113
Network adapters	114
Types of network adapters	114
1. Ethernet adapters	114
2. Wireless adapters	114
3. Powerline adapters	115
The importance of network adapters in modern networks	115
Types of buses	115
Baud rates	115
Connectors	115
Switch	116
Router	117
Modem	118
Firewall	119
Access point	120
Repeater	121
Hub	121
Hub functions	122
Bridge	122
VoIP gateway	123
Network cabling	123
UTP (Unshielded Twisted Pair)	123
STP (Shielded Twisted Pair)	124
FTP (Foiled Twisted Pair)	124
What is FTP cabling?	124
Comparison with other types of cabling	125
Fiber optic cable	125
Network connectors	126
RJ-45	126
RJ-11	127
BNC	127
E2000	127
SC, LC, ST connectors	128
Optical tray	128
Media converter	129
Patch panel	129
PoE panel	130
PoE injector	131
SFP module	132
Antenna (LTE, Wi-Fi, Bluetooth)	132
Frequency	132
Polarization	132
Horizontal polarization	132
Vertical polarization	132
Dual (cross) polarization	132
Antenna types	133
Examples to think about	134
Where to use NAS and where to use SAN?	135
NAS (Network Attached Storage)	135
