Preface.....	xi
Acknowledgments	xiii
About the Authors	xv
Notation Used.....	xvii
List of Abbreviations	xix
1 Introduction	1
1.1 First Encounter with Intra-Individual Variation	1
1.1.1 Cattell's Data Box	2
1.1.2 IAV in Psychology and Related Sciences.....	4
1.1.3 In What Areas Have the Studies of IAV Been Useful?	6
1.2 Statistical Analysis of IAV: An Overview of the Structure of This Book	10
1.2.1 Focus on Dynamic Factor Models.....	11
1.2.2 Focus on Replicated Multivariate Time Series	12
1.2.3 Focus on User-Friendly Model Selection and Estimation Approaches.....	13
1.2.4 Special Topic: Methods for Dealing with Heterogeneous Replications.....	14
1.2.5 Special Topic: Non-Stationary Dynamic Factor Models.....	14
1.2.6 Special Topic: Control Theory	15
1.2.7 Special Topic: Intersection of Network Science and IAV.....	15
1.3 Description of Exemplar Data Sets.....	16
1.3.1 Big Five Personality Daily Data	16
1.3.2 Fisher Data	16
1.3.3 The ADID Study.....	17
1.3.4 fMRI Data.....	17
1.4 Notation.....	18
1.5 Conclusion.....	18
References	18
Appendix: Heuristic Introduction to Time Series Analysis for Psychologists	22
2 Ergodic Theory: Mathematical Theorems about the Relation between Analysis of IAV and IEV	27
2.1 Introduction	27
2.2 Some History Regarding Generalizability of IEV and IAV Results	28

2.3	Two Conceptualizations of Time Series.....	31
2.4	Some Preliminaries.....	32
2.5	When Is a System Ergodic?	36
2.6	Birkhoff's Theorem of Ergodicity	37
2.7	Heterogeneity as Cause of Non-Ergodicity.....	39
2.8	Example of a Non-Ergodic Process	41
2.9	Conclusion.....	44
	References	45
3	P-Technique.....	49
3.1	The P-Technique Factor Model.....	50
3.2	The Structural Model of the Covariance Function of $y(t)$ in P-Technique Factor Analysis.....	52
3.3	Conducting P-Technique Factor Analysis	54
3.3.1	Simulated Data	54
3.3.2	Constraints for Exploratory P-Technique Factor Analysis.....	55
3.3.3	Assessing Goodness of Fit.....	57
3.3.4	Alternative Indices of Model Fit	58
3.3.5	An Important Caveat.....	59
3.3.5.1	The Recoverability of P-Technique	60
3.3.5.2	Statistical Theory	60
3.3.5.3	Concluding Thoughts	60
3.3.6	Convention.....	61
3.3.7	Determining the Number of Factors in P-Technique Factor Analysis.....	61
3.3.8	Oblique Rotation to Simple Structure.....	63
3.3.9	Testing the Final Oblique P-Technique Two-Factor Model.....	64
3.3.10	Empirical Example.....	65
3.4	Conclusion.....	68
3.4.1	Statistical Background.....	68
3.4.2	Application of P-Technique to Empirical Data Sets.....	69
	References	69
4	Vector Autoregression (VAR).....	73
4.1	Brief Introduction to the Use of AR and VAR Analysis in the Study of Human Dynamics	73
4.2	Elementary Linear Models for Univariate Stationary Time	74
4.3	Stability and Stationarity	78
4.3.1	Technical Details Regarding Stability	80
4.3.2	Testing for Stability.....	81
4.3.3	Tests for Stationarity.....	81

4.4	Detrending Data.....	85
4.5	Univariate Order Selection	88
4.6	General VAR Model.....	90
4.7	Multivariate Order Selection.....	93
4.8	Testing of Residuals	95
4.9	Structural Vector Autoregression.....	96
4.10	Granger Causality	98
4.11	Discussion	99
	References	100
5	Dynamic Factor Analysis.....	103
5.1	General Dynamic Factor Models.....	104
5.1.1	Process Factor Analysis.....	105
5.1.2	Shock Factor Analysis	108
5.2	Lag Order Selection	109
5.3	Estimation	109
5.3.1	SEM Estimation with Maximum Likelihood	110
5.3.1.1	Application 5.1: Exploratory SFA Estimated on Simulated Data with SEM.....	113
5.3.1.2	Application 5.2: PFA Estimated on Simulated Data with SEM.....	116
5.3.2	SEM with MIIV-2SLS Estimation.....	118
5.3.2.1	Application 5.3: PFA Estimated on Simulated Data with MIIV-2SLS	120
5.3.2.2	Application 5.4: PFA on fMRI Data.....	121
5.3.3	Raw Data Likelihood Approach.....	121
5.3.3.1	Application 5.4: PFA Estimated on Simulated Data with the Kalman Filter	127
5.4	Conclusions.....	128
	References	128
6	Model Specification and Selection Procedures	131
6.1	Data-Driven Methods for Person-Specific Discovery of Relations among Variables	132
6.2	Filter Methods.....	133
6.3	Wrapper Methods	134
6.3.1	Wald's Test.....	135
6.3.2	Likelihood Ratio Tests.....	135
6.3.3	Score Functions	136
6.3.4	Example: Automated Relation Selection Using Wrapper Methods.....	137
6.3.4.1	Model Search Procedure	137
6.3.4.2	Simulated Data Example.....	139
6.3.4.3	Empirical Data Example.....	141
6.3.5	Conclusion on Wrapper Approaches	142

6.4	Embedded Methods: Regularization	142
6.4.1	Exemplar Approach: Regularization in Graphical VAR	144
6.5	Problems with Individual-Level Searches.....	146
6.6	Data Aggregation Approaches.....	147
6.6.1	Exemplar Output of Aggregated Approaches	147
6.6.2	Issues with Traditional Forms of Aggregation	148
6.7	Replication Approaches: Group Iterative Multiple Model Estimation (GIMME)	150
6.7.1	Original GIMME.....	151
6.7.2	Hybrid GIMME	154
6.8	Conclusions.....	156
	References	157
7	Models of Intra-Individual Variability with Time-Varying Parameters (TVPs)	161
7.1	The DFM(p,q,l,m,n) across $N \geq 1$ Individuals.....	163
7.2	The DFM(p,q,l,m,n) with TVPs as a State-Space Model.....	163
7.3	Nonlinear State-Space Model Estimation Methods.....	167
7.3.1	Estimation Procedures	168
7.3.1.1	The Extended Kalman Filter (EKF) and the Extended Kalman Smoother (EKS)	169
7.3.1.2	Parameter Estimation	171
7.4	Observability and Controllability Conditions in TVPs	173
7.5	Possible Functions for Representing Changes in the TVPs.....	174
7.6	Illustrative Examples	177
7.6.1	DFM Model with Time-Varying Set-Point	177
7.6.2	DFM($p,q,0,1,0$) with Time-Varying Set-Point and Cross-Regression Parameters.....	183
7.7	Closing Remarks	188
	References	188
8	Control Theory Optimization of Dynamic Processes	193
8.1	Control Theory Optimization	194
8.2	Illustrative Simulation.....	198
8.3	Summary.....	206
	References	206
9	The Intersection of Network Science and Intensive Longitudinal Analysis.....	209
9.1	Terminology.....	209

9.2	Network Measures.....	213
9.2.1	Summarizing Edge Values: Degree, Density, Weight, and Strength	213
9.2.2	Centrality Measures	215
9.2.3	Measures of Segregation and Integration	216
9.3	Community Detection Algorithms	217
9.3.1	Walktrap	219
9.4	Using Community Detection to Subgroup Individuals with Similar Dynamic Processes	221
9.4.1	Exemplar Method: Subgrouping GIMME.....	222
9.4.2	Community Detection Empirical Example: Identifying Subsets of Individuals	224
9.5	Assessing Robustness of Community Detection Solutions.....	225
9.5.1	Obtaining Random Networks	225
9.5.2	Approach 1: Identifying When Solution Changes	226
9.5.3	Approach 2: Evaluating Modularity	230
9.6	Community Detection and P-Technique	230
9.6.1	Community Detection Example: Identifying Subsets of Variables.....	232
9.7	Discussion	234
	References	234
	Index	237
