ARTICLES

Motions of Myosin Heads That Drive Muscle Contraction 249

Malcolm Irving and Gabriella Piazzesi

Activation of the myosin heads has been directly linked to force generation in isolated muscle cells.

Metabolic Sensor in Action: News from the ATP-Sensitive K⁺-Channel 255

Trapp and F. M. Ashcroft

Molecular biology reveals how the ATP-sensitive channel senses changes in cell metabolism.

Cholecystokinin Type A and Type B Receptors and Their Modulation of Noid Analgesia 263

Erizio Benedetti

Blockade of cholecystokinin receptors potentiates analgesia induced by exogenous and endogenous opioids both in animals and in humans.

Ident Whisker Barrels: Windows to Cerebral Cortical Function 268

Daniel J. Simons

Neural circuits in the somatosensory cortex enhance receptive field tuning by acting as temporal contrast detectors.

Mechanical Links Between Locomotion and Breathing: Can You Breathe With Your Legs? 273

Chieh-tze Lee and Robert B. Banzett

Mechanical links between locomotion and breathing aid breathing, but they contribute less than 20% to the tidal volume.

Mitogens and Calcium Channels 279

Davide Lovisolo, Carla Distasi, Susanna Antoniotti, and Luca Munaron

Mitogens and growth factors can induce the opening of Ca²⁺-permeable cationic channels in the membrane of many cells.

MAPK Cascades in Cell Growth and Death 286

Joseph T. Neary

A cascade of three cytosolic protein kinases is crucial for cellular proliferation and differentiation, whereas related cascades are involved in growth arrest and apoptosis.
