About the authors	xi
Introduction	xix

Section I Biogeography

1. Effect of climate change on plant regeneration from seeds in the arctic and alpine biome	3
---	---

Andrea Mondoni, Borja Jiménez-Alfaro and Lohengrin A. Cavieres

Introduction	3
Climate warming in the arctic–alpine life zones	4
Effects of climate warming on arctic–alpine plants	4
Climate warming and plant regeneration from seeds in alpine–arctic environments	5
Seed production and seed mass	6
Seed dispersal in time and space	7
Seed dormancy and germination	8
Seedling emergence and establishment	9
Conclusions and future research	11
References	12
Further reading	18

2. Effects of climate change on regeneration of plants from seeds in boreal, subarctic, and subalpine regions	19
---	----

Bente J. Graae, Kristin O. Nystuen, Vigdis Vandvik and Amy E. Eycott

The boreal ecosystem	19
Recruitment from seeds in the boreal zone	21
Predicted climate change and its impact on the boreal zone	21
Sampling and characterizing the knowledge base	22
Seed production	23

Seed dormancy and germination	24
Seedling survival and growth	26
Long-term consequences of climate change on seedling recruitment	27
Future research	27
References	28

3. Effects of climate change on plant regeneration from seeds in the cold deserts of Central Asia	33
---	----

Juanjuan Lu, Dunyan Tan, Carol C. Baskin and Jerry M. Baskin

Introduction	33
Climate change in cold deserts of Central Asia	34
Plant life history traits	34
Seed dormancy/germination	34
Seedling survival and growth	36
Plant growth, development, biomass accumulation/allocation, and seed production	37
Phenology	37
Plant morphological characters	40
Dry mass accumulation and allocation	40
Number of seeds produced	41
Importance of heterodiaspory	41
Vegetation and community dynamics	42
Future research needs	43
Acknowledgments	43
References	43

4. Plant regeneration by seeds in hot deserts	47
---	----

Marina L. LaForgia, D. Lawrence Venable and Jennifer R. Gremer

Introduction	47
Climate change in deserts	48
Effects of increasing temperature	49
Increasing temperature effects on seed survival	49

Increasing temperature effects on dormancy and seed banks	50	7. Effect of climate change on regeneration of plants from seeds in grasslands	87
Increasing temperature effects on germination	51	<i>Eric Rae and Yuguang Bai</i>	
Effects of decreasing precipitation	51	Introduction	87
Decreasing precipitation effects on dormancy and seed banks	54	Climate change in grasslands	87
Decreasing precipitation effects on germination	54	Grassland species composition and population dynamics	88
Increasing variability and interactions between temperature and precipitation	54	Reproductive phenology and seed production	89
Effects of increasing variability and temperature-precipitation interactions on germination	55	Seed germination	92
Other climatic changes	55	Seed physiology	93
Summary and conclusions	56	Conclusions and future research	94
Future research	56	References	95
References	56	8. Climate change and plant regeneration from seeds in Mediterranean regions of the Northern Hemisphere	101
5. Effect of climate change on plant regeneration from seeds in steppes and semideserts of North America	61	<i>Efisio Mattana, Angelino Carta, Eduardo Fernández-Pascual, Jon E. Keeley and Hugh W. Pritchard</i>

19. Regeneration in recalcitrant-seeded species and risks from climate change 259

Hugh W. Pritchard, Ser Shen, Fui Ying Tsan, Bin Wen, Ganesh K. Jaganathan, Geângelo Calvi, Valerie C. Pence, Efisio Mattana, Isolde D.K. Ferraz and Charlotte E. Seal

Introduction	259
Case study 1: Regeneration and light	260
Seed development	261
Case study 2: Regeneration in <i>Coffea</i> species	262
Is dormancy present in recalcitrant seeds?	262
Germination in relation to precipitation and temperature	263
Case study 3: Regeneration timing in relation to precipitation in seasonally dry tropical vegetation	264
Stopping germination during seed storage	266
Seed and seedling banks	267
Future research needs	267
Acknowledgments	268
References	268

20. Effect of climate change on regeneration of seagrasses from seeds 275

Gary A. Kendrick, Robert J. Orth, Elizabeth A. Sinclair and John Statton

Introduction	275
Evolution of seagrasses	276
Seagrass mating systems	277
Flowering, seed production, and seed germination	278
Seed dispersal	279
Seed settlement and early seedling survival	279
Climate change and seagrass regeneration from seeds—the future	280
Acknowledgments	280
References	281

21. Soil seed banks under a warming climate 285

Margherita Gioria, Bruce A. Osborne and Petr Pyšek

Introduction	285
Effects of a warming climate on seed bank persistence and density	286
Changes in the composition and structure of seed banks under a warming climate	288
Mountain ecosystems and elevation gradients	288
Seed banks confer increased resilience in extreme environments	289
Buffering the effects of climate warming: temporary resilience?	290
Seed banks and plant migration potential under a warming climate	290
Challenges and future research directions	291
Concluding remarks	292
References	292

Section III Conclusion

22. Summary and general conclusions 301

Carol C. Baskin and Jerry M. Baskin

Seed production	301
Seed dormancy and germination	301
Seedling survival and growth	302
Shifts in species composition of plant communities	303
Future research needs	303
Conclusions	305

Index	307
