

Table of Contents

1	Abstract.....	7
2	Introduction	9
2.1	Abasic site (Ap site).....	9
2.2	Fpg/Nei family.....	11
2.3	Formamidopyrimidine DNA glycosylase (MutM).....	12
2.4	Endonuclease VIII-like 3 (NEIL3 glycosylase).....	16
2.5	DNA interstrand cross-link	18
2.6	The NEIL3 pathway of ICL repair	22
3	Aims of the study	25
4	Publications.....	27
4.1	Publications included in dissertation thesis.....	27
4.2	Publications not included in dissertation thesis	27
5	Materials and Methods.....	29
5.1	Protein expression and purification.....	29
5.2	MutM - DNA binding gel-based assay	30
5.3	Fluorescence anisotropy DNA binding assay	31
5.4	Crystallization, data collection and data analysis	32
5.5	Structure alignment	33
5.6	Preparation of DNA containing Ap site	33
5.7	DNA crosslink formation	34
5.8	Isolation of ICL from polyacrylamide urea gel for further use.....	35
5.9	Degradation analysis of ICL.....	36
6	Results.....	37
6.1	Crystal structure of Meningococcal MutM	37
6.2	MutM binds synthetic oligonucleotides with Ap-like analogue THF	38
6.3	Crystal structure of MutM bound to DNA	39
6.4	The conformational changes induced in MutM after binding DNA.....	42
6.5	DNA substrates design	46
6.6	Ap site and Ap-ICL formation	47
6.7	The influence of the opposite base to the Ap site to the rate of formation of Ap-ICL.....	48
6.8	Varying of the base-pairs in the vicinity of Ap on its 5' end	48

6.9	AT-rich and GC-rich regions relation to amount of Ap-ICL formation	51
6.10	Stability of Ap-ICL.....	54
7	Discussion.....	57
7.1	Structural characterization of MutM glycosylase	57
7.2	Formation and stability of Ap-ICL	60
8	Conclusion.....	65
9	Abbreviations.....	67
10	References.....	69
11	Supplementary	83
12	Attachment	

Conformational changes of DNA repair glycosylase MutM triggered by DNA binding

Barbora Landova and Jan Silhan

The Rate of Formation and Stability of Abasic Site Interstrand Crosslinks in the DNA duplex

Andrea Huskova, Barbora Landova, Evzen Boura, Jan Silhan
