About the Author xi

Preface xiii

I

Structure of Atoms and Molecules

1. Light, electrons, and nuclei

- 1.1. Some early experiments in atomic physics 3
- 1.2. The nature of light 7
- 1.3. The Bohr model 11
- 1.4. Particle-wave duality 15
- 1.5. Electronic properties of atoms 16
- 1.6. Nuclear binding energy 22
- 1.7. Nuclear stability 24
- 1.8. Types of nuclear decay 25
- 1.9. Predicting decay modes 29
- Questions and problems 32
- References and resources 33

2. Basic quantum mechanics and atomic structure

- 2.1. The postulates 35
- 2.2. The hydrogen atom 43
- 2.3. The helium atom 47
- 2.4. Slater wave functions 50
- 2.5. Electron configurations 52
- 2.6. Spectroscopic states 56
- Questions and problems 62
- References and resources 64

3. Covalent bonding in diatomic molecules

- 3.1. The basic procedures of molecular orbital methods 65

- 3.2. The H_2^+ and H_2 molecules 73
- 3.3. Diatomic molecules of second-row elements 76
- 3.4. Photoelectron spectroscopy 82
- 3.5. Heteronuclear diatomic molecules 85
- 3.6. Electronegativity 88
- 3.7. Spectroscopic states for molecules 92
- Questions and problems 93
- References and resources 95

4. A survey of inorganic structures and bonding

- 4.1. Structures of molecules having single bonds 98
- 4.2. Resonance and formal charge 109
- 4.3. Complex structures—a preview of coming attractions 123
- 4.4. Electron-deficient molecules 133
- 4.5. Structures having unsaturated rings 135
- 4.6. Bond energies 137
- Questions and problems 141
- References and resources 144

5. Symmetry and molecular orbitals

- 5.1. Symmetry elements 145
- 5.2. Orbital symmetry 156
- 5.3. A brief look at group theory 158
- 5.4. Construction of molecular orbitals 164
- 5.5. Orbitals and angles 170
- 5.6. Simple calculations using the Hückel method 172
- 5.7. Determination of the structure of a triatomic molecule 185
- Questions and problems 187
- References and resources 189

II

Condensed Phases

6. Dipole moments and intermolecular interactions

- 6.1. Dipole moments 193
- 6.2. Dipole—dipole forces 199
- 6.3. Dipole—induced dipole forces 201
- 6.4. London (dispersion) forces 203
- 6.5. Van der Waals equation 206
- 6.6. Hydrogen bonding 209
- 6.7. Cohesion energy and solubility parameters 220
- 6.8. Miscibility 224
- 6.9. Solvatochromism 225
- Questions and problems 226
- References and resources 229

7. Ionic bonding and structures of solids

- 7.1. Energetics of crystal formation 231
- 7.2. Madelung constants 236
- 7.3. The Kapustinskii equation 239
- 7.4. Ionic sizes and crystal environments 240
- 7.5. Crystal structures 244
- 7.6. Solubility of ionic compounds 250
- 7.7. Proton and electron affinities 256
- 7.8. Structures of metals 259
- 7.9. Defects in crystals 262
- 7.10. Phase transitions in solids 265
- 7.11. Heat capacity of solids 267
- 7.12. Hardness of solids 270
- Questions and problems 273
- References and resources 276

8. Dynamic processes involving inorganic solids

- 8.1. Characteristics of solid-state reactions 277
- 8.2. Thermal methods of analysis 281
- 8.3. Effects of pressure 283
- 8.4. Diffusion in solids 285
- 8.5. Sintering 289

- 8.6. Phase transitions 292
- 8.7. Adsorption 296
- 8.8. Kinetic models for reactions in solids 298
- 8.9. Reactions in some solid inorganic compounds 311
- 8.10. Reactions at interfaces 313
- 8.11. Heterogeneous catalysis 315
- 8.12. Drift and conductivity 316
- 8.13. Photovoltaic materials 317
- 8.14. Batteries 321
- Questions and problems 324
- References and resources 327

III

Acids, Bases, and Solvents

9. Acid—base chemistry

- 9.1. Arrhenius theory 333
- 9.2. Brønsted—Lowry theory 337
- 9.3. Factors affecting strength of acid and bases 340
- 9.4. Acid—base character of oxides 345
- 9.5. Proton affinities 347
- 9.6. Lewis theory 350
- 9.7. Catalytic behavior of acids and bases 354
- 9.8. The hard—soft interaction principle 359
- 9.9. Electronic polarizabilities 369
- 9.10. The Drago four-parameter equation 369
- Questions and problems 373
- References and resources 376

10. Chemistry in nonaqueous solvents

- 10.1. Some common nonaqueous solvents 377
- 10.2. The solvent concept 379
- 10.3. Amphoteric behavior 381
- 10.4. The coordination model 381
- 10.5. Chemistry in liquid ammonia 383
- 10.6. Liquid hydrogen fluoride 389
- 10.7. Liquid sulfur dioxide 392
- 10.8. Superacids 396
- Questions and problems 398
- References and resources 400

IV

Chemistry of the Elements

11. Chemistry of metallic elements

- 11.1. The metallic elements 404
- 11.2. Bonding in metals 404
- 11.3. Group IA and IIA metals 408
- 11.4. Zintl phases 418
- 11.5. Aluminum and beryllium 420
- 11.6. The first-row transition metals 425
- 11.7. Second- and third-row transition metals 427
- 11.8. Alloys 429
- 11.9. Chemistry of transition metals 435
- 11.10. The lanthanides 448
- Questions and problems 451
- References and resources 454

12. Organometallic compounds of the main group elements

- 12.1. Preparation of organometallic compounds 458
- 12.2. Organometallic compounds of Group IA metals 461
- 12.3. Organometallic compounds of Group IIA metals 463
- 12.4. Organometallic compounds of Group IIIA metals 466
- 12.5. Organometallic compounds of Group IVA metals 471
- 12.6. Organometallic compounds of Group VA elements 472
- 12.7. Organometallic compounds of Zn, Cd, and Hg 473
- Questions and problems 474
- References and resources 476

13. Chemistry of nonmetallic elements I. Hydrogen, boron, oxygen, and carbon

- 13.1. Hydrogen 477
- 13.2. Boron 485
- 13.3. Oxygen 497
- 13.4. Carbon 507

- Questions and problems 525
- References and resources 528

14. Chemistry of nonmetallic elements II. Groups IVA and VA

- 14.1. The group IVA elements 529
- 14.2. Nitrogen 549
- 14.3. Phosphorus, arsenic, antimony, and bismuth 567
- Questions and problems 591
- References and resources 595

15. Chemistry of nonmetallic elements III. Groups VIA–VIIIA

- 15.1. Sulfur, selenium, and tellurium 597
- 15.2. The halogens 622
- 15.3. The noble gases 643
- Questions and problems 652
- References and resources 655

V

Chemistry of Coordination Compounds

16. Introduction to coordination chemistry

- 16.1. Structures of coordination compounds 659
- 16.2. Metal–ligand bonds 663
- 16.3. Naming coordination compounds 666
- 16.4. Isomerism 667
- 16.5. A simple valence bond description of coordinate bonds 675
- 16.6. Magnetism 680
- 16.7. A survey of complexes of first-row metals 682
- 16.8. Complexes of second- and third-row metals 683
- 16.9. The 18-electron rule 684
- 16.10. Back donation 688
- 16.11. Complexes of dinitrogen, dioxygen, and dihydrogen 693
- Questions and problems 697
- References and resources 700

17. Ligand fields and molecular orbitals

- 17.1. Splitting of *d* orbital energies in octahedral fields 701
- 17.2. Splitting of *d* orbital energies in fields of other symmetry 704
- 17.3. Factors affecting Δ 709
- 17.4. Consequences of ligand field splitting 711
- 17.5. Jahn–Teller distortion 713
- 17.6. Spectral bands 715
- 17.7. Molecular orbitals in complexes 717
- Questions and problems 726
- References and resources 727

18. Interpretation of spectra

- 18.1. Spectroscopic states in ligand fields 729
- 18.2. Orgel diagrams 734
- 18.3. Racah parameters and quantitative interpretations 736
- 18.4. The nephelauxetic effect 739
- 18.5. Tanabe–Sugano diagrams 742
- 18.6. The Lever method 747
- 18.7. Jørgensen's method 750
- 18.8. Charge transfer absorption 750
- 18.9. Solvatochromism 751
- Questions and problems 754
- References and resources 755

19. Composition and stability of complexes

- 19.1. Composition of complexes in solution 757
- 19.2. Job's method of continuous variations 759
- 19.3. Equilibria involving complexes 761
- 19.4. Distribution diagrams 767
- 19.5. Factors affecting the stability of complexes 771
- Questions and problems 777
- References and resources 780

20. Synthesis and reactions of coordination compounds

- 20.1. Synthesis of coordination compounds 781
- 20.2. Substitution reactions in octahedral complexes 787
- 20.3. Ligand field effects 795
- 20.4. Acid-catalyzed reactions of complexes 798

- 20.5. Base-catalyzed reactions of complexes 799
- 20.6. The compensation effect 801
- 20.7. Linkage isomerization 803
- 20.8. Substitution in square planar complexes 805
- 20.9. The *trans* effect 807
- 20.10. Electron transfer reactions 812
- 20.11. Reactions in solid coordination compounds 815
- Questions and problems 823
- References and resources 826

21. Complexes containing metal–carbon and metal–metal bonds

- 21.1. Binary metal carbonyls 829
- 21.2. Structures of metal carbonyls 832
- 21.3. Bonding of carbon monoxide to metals 834
- 21.4. Preparation of metal carbonyls 837
- 21.5. Reactions of metal carbonyls 839
- 21.6. Structure and bonding in metal–alkene complexes 846
- 21.7. Preparation of metal–alkene complexes 852
- 21.8. Chemistry of cyclopentadienyl and related complexes 854
- 21.9. Bonding in ferrocene 858
- 21.10. Reactions of ferrocene and other metallocenes 861
- 21.11. Complexes of benzene and related aromatics 864
- 21.12. Compounds containing metal–metal bonds 867
- Questions and problems 871
- References and resources 873

22. Coordination compounds in catalysis

- 22.1. Elementary steps in catalytic processes 876
- 22.2. Homogeneous catalysis 891
- Questions and problems 904
- References and resources 906

23. Bioinorganic chemistry

- 23.1. What metals do in some living systems 910
- 23.2. Cytotoxicity of some metal compounds 921

23.3. Cytotoxicity of 5-fluorouracil	933
23.4. Antimalarial metallodrugs	934
23.5. Drugs for treating leishmaniasis	935
Questions and problems	937
References and resources	938

Appendix A: Ionization energies	941
Appendix B: Character tables for selected point groups	945
Index	951
