

Contents

1	Background and Overview of Biotechnology	1
	Biotechnology and Its Applications	2
	Red Biotechnology	2
	White Biotechnology	7
	Green Biotechnology	8
	The First Genetically Modified Crop: Roundup Ready Soybean Seeds	8
	Blue Biotechnology	15
	Development of Biotechnology Techniques and Products	16
	References	19
2	A Brief History of the Fda and Its Role in Regulating Biotechnology Products	21
	A Historical Overview	22
	The Coordinated Framework	26
	Regulatory Agencies and the Intersection of Science with Public Health	28
	The Debate Over Genetically Engineered Foods: Safety and Regulation	30
	References	49
3	Products of Biotechnology and IP System	51
	IP Rights in Biotechnology	52
	Patentable Subject Matter in Biology-Related Inventions	55
	Copyrighting the Human Genome Sequence Data	62
	Preventing Unauthorized Use of Biotech Trade Secrets	65
	The Evolution of International IP Protection	77
	References	81
4	The Application of Patent Law to Biotechnology	83
	The Adrenalin Patent and Patentability of Biological Materials	84
	The Role of Parke-Davis V. Mulford in the Evolution of Patent Law	87

	The Advent of Recombinant DNA and the Evolution of Patent Law	92
	Asilomar Conference Guidelines for Recombinant DNA Research	95
	References	98
5	The Birth of the Biotechnology Industry	101
	The Rise of Biotech: The Three Key Events That Paved The Way	102
	Patentability of Living Organisms	104
	Commercialization of Academic Research: The Bayh–Dole Act	112
	The Founding and Success of Genentech	115
	References	120
6	The Limits and Challenges of Gene Editing	121
	From Creation to Controversy: The Harvard Oncomouse Patent	122
	Human Genome Diversity Project and Indigenous Peoples’ Rights	124
	Navigating the Complexities of Gene Patenting	128
	The CRISPR Revolution: Advancements and Applications in Gene Editing	137
	References	149
