

TABLE OF CONTENTS / OBSAH

Budziński Bartosz, Majer Stanisław, Merska Oliwia, Sikora Paweł Simplified cement bound granular mixture (CBGM) design method based on continuous ultrasonic wave measurement	1
Čajka Radim, Burkovič Kamil Causes of failures and collapse of gabion walls above roads	2
Dobeš Pavel The significance of experimental testing in the static design of timber structures	3
Federowicz Karol, Hoffmann Marcin, Sikora Paweł Application of Eurocode 2 in predicting shrinkage of 3D-printed concretes: Challenges and model optimization	4
Filip Alexander, Tvrda Katarína, Minárová Mária Tank analysis under load effects	5
Flodr Jakub, Lehner Petr, Gřešica Dominik, Krejsa Martin Simple design methodology for clinch joint of steel structures	6
Frantík Petr Approximation of a tensile member with large strain	7
Ghosh Pratanu, Chaudhary Sushant, Madrigal Paolo, Le Ha, Camacho Angela Non-destructive maturity method in zeolite-based high-performance concrete	8
Gosztola Dániel, Grubits Péter, Szép János, Movahedi Rad Majid Impact of geometrical variables and concrete strength variations on steel-concrete composite connections using script-based material and geometrical modeling	9
Gřešica Dominik, Lehner Petr, Juračka David Numerical parametric study of 3D printed joints	10
Horňáková Marie, Juračka David, Dobeš Pavel, Lehner Petr Mechanical performance of 3D-printed joints for timber frames	11

Johanides Marek, Lokaj Antonín Timber semirigid frame connection with improved deformation capacity and ductility	12
Juračka David, Bujdoš David, Lehner Petr, Krejsa Martin Inverse analysis of material properties of special shapes of 3D printed samples	13
Jurczak Robert Assessment of the quality of the joint of the old protective layer of mastic asphalt with the new one on engineering objects	14
Kawulok Marek, Pospíšil Stanislav Analysis of damping of a ball absorber from experimentally obtained data	15
Kološ Ivan, Michalcová Vladimíra, Lausová Lenka Influence of traffic on the dispersion of water mist in the road surroundings	16
Kormaníková Eva, Vodička Roman, Dubecký Daniel Application of a computational interface damage model to a concrete-FRP shear connector	17
Koubová Lenka The influence of frame structure parameters on its natural frequencies	18
Králík Juraj Experimental and numerical analysis of atypical shape of NPP structures and ventilation chimney on the effects of extreme wind load	19
Krejsa Martin, Lehner Petr, Flodr Jakub Analysis of the clinch method for joining structural components	20
Křístková Barbora, Křivý Vít, Vacek Miroslav Numerical modelling of 3D printed atypical components of glass-steel detail	21
Lehner Petr, Krejsa Martin, Gřešica Dominik, Flodr Jakub Numerical simulation of crack propagation in clinch joints	22

Majer Stanislav, Budziński Bartosz, Lehner Petr Fatigue durability of flexible pavement structures with cement-bound granular material	23
Malíková Lucie, Miarka Petr Parametric analysis on concrete cone failure	24
Matýsková Kateřina, Horňáková Marie Identification of fracture characteristics of concrete mixtures with waste material using SARA stochastic software	25
Miarka Petr, Malíková Lucie, Seidl Stanislav, Bílek Vlastimil Fatigue behavior of concrete: From low-cycle to high-cycle fatigue properties	26
Michalcová Vladimíra, Kološ Ivan, Lausová Lenka Numerical analysis of heat transfer in the surface boundary layer	27
Movahedi Rad Majid, Grubits Péter Elasto-plastic truss optimization under geometric nonlinearity using a genetic algorithm	28
Mynářčík Petr, Vacek Miroslav, Mikolášek David Physical and numerical analysis of corrosion damage of prestressing tendons of the collapsed roof structure	29
Nagirniak Mykola, Chalecki Marek Certain issues in the analytical integration of the Boussinesq problem	30
Novák Drahomír, Vořechovský Miroslav, Rusina Radoslav Making reliability analysis easy using MS Excel and FReET software	31
Pařenica Přemysl, Lehner Petr Numerical verification of typical connection of high thin-walled purlins . .	32
Rutkowska Gabriela, Żóltowski Mariusz, Żóltowski Bogdan, Ogrodnik Paweł, Barylka Adam, Wierzbicki Tomasz The present study of research methodology to assess the degradation state through the analysis of vibration signals	33

Sikora Pawel

Towards resistant and durable 3D printed structures – Summary of SONATA (NCN) project 34

Simwanda Lenganji, Markova Jana, Sykora Miroslav

Predicting future ground snow loads and basic wind speeds using recurrent neural networks 35

Sýkora Miroslav, Holický Milan, Kotassková Klára, Marková Jana, Simwanda Lenganji, Valík Adam

On Modelling of Snow and Wind Loads – Lessons Learnt from Czech Meteorological Records 36

Vacek Miroslav, Křivý Vít, Křistková Barbora

Degradation effects of chloride ions on structures 37

Valášková Veronika, Vlček Jozef

Identification of the deformation area moving vehicle on concrete pavement by FEM 38

Velát Matěj, Schmid Pavel, Daněk Petr, Dvořák Richard, Hrabová Kristýna

Diagnostic and experimental analysis of 3D-printed concrete structural elements 39

Vilč Martin, Vašek Jakub

Model of the cross-border footbridge Karviná – Hažlach 40
