

Contents

Editors' biographies *xi*

List of contributors *xiii*

Section 1 **Introductions**

- 1 Neuroscience in education: an (opinionated) introduction 3

Mike Anderson and Sergio Della Sala

- 2 Understanding the neuroscience and education connection: themes emerging from a review of the literature 13

Miriam Beauchamp and Catherine Beauchamp

Section 2 **Theoretical approaches for developing the good, removing the bad and giving the ugly a makeover in neuroscience and education**

- 3 Constructing connection: the evolving field of mind, brain and education 33

Donna Coch and Daniel Ansari

- 4 Principles of learning, implications for teaching? Cognitive neuroscience and the classroom 47

Usha Goswami

Section 3 **The contribution of cognitive neuroscience to understanding domains of learning**

- 5 Reading in alphabetic writing systems: evidence from cognitive neuroscience 61

Jane Ashby and Keith Rayner

- 6 Can teachers count on mathematical neurosciences? 84

Xavier Seron

- 7 Working memory: the seat of learning and comprehension 111

Nelson Cowan

- 8 Applications of cognitive science to education 128

Henry L. Roediger, III, Bridgid Finn and Yana Weinstein

Section 4 **The influence of neurogenetics on education**

- 9 Genetics and genomics: good, bad and ugly 155

Yulia Kovas and Robert Plomin

- 10 Genetic sciences for developmentalists: an example of reading ability and disability 174
Elena L. Grigorenko
- 11 Education 2.0: genetically-informed models for school and teaching 188
Timothy C. Bates

Section 5 **Misuse of neuroscience in the classroom**

- 12 Neuroscience, education and educational efficacy research 215
Max Coltheart and Genevieve McArthur
- 13 Educational double-think 222
Michael C. Corballis
- 14 Rose-tinted? The use of coloured filters to treat reading difficulties 230
Robert D. McIntosh and Stuart J. Ritchie
- 15 Don't try this at school: the attraction of 'alternative' educational techniques 244
Stuart J. Ritchie, Eric H. Chudler and Sergio Della Sala

Section 6 **Current conjectures from educational neuroscience**

- 16 Bridging between brain science and educational practice with design patterns 267
Michael W. Connell, Zachary Stein and Howard Gardner
- 17 Assuring successful lifelong learning: can neuroscience provide the key? 286
Christiane Spiel, Barbara Schober, Petra Wagner and Monika Finsterwald
- 18 Educational cognitive neuroscience: designing autism-friendly methods to teach emotion recognition 299
Simon Baron-Cohen, Ofer Golan and Emma Ashwin
- 19 Schools and the new ecology of the human mind 312
Domenico Parisi
- 20 Brain-science and education in Japan 319
Hideaki Koizumi

Section 7 **Final remarks**

- 21 The good, the bad and the ugly in neuroscience and education: an educator's perspective 337
Paul Howard-Jones
- 22 Of all the conferences in all the towns in all the world, what in heaven's name brought us to *neuroeducation*? 356
Mike Anderson and Mary Oliver
