	PAGE
PREFACE.	vii
 CHAPTER	
I. INTRODUCTION	1
1-1. Scope of Gaseous Conduction and Electronics	1
1-2. Mechanism of Conduction.	2
1-3. Metallic and Gaseous Conduction.	5
1-4. Applications	9
1-5. Object of This Book	11
1-6. Units	12
 II. THE ELECTROSTATIC FIELD.	 17
2-1. Introduction.	17
2-2. Electric Intensity at a Point	19
2-3. Electric Potential.	23
2-4. Relation between Potential and Electric Intensity	27
2-5. Gauss's Theorem	29
2-6. Mapping Electric Fields.	37
2-7. The Method of Images	40
 III. MOVEMENT OF CHARGED PARTICLES IN HIGH VACUUM.	 45
3-1. Forces in the Electric Field.	45
3-2. Laws of Motion in an Electrostatic Field.	46
3-3. Laws of Motion in a Uniform Magnetic Field.	51
3-4. The Cathode-ray Oscillograph: the Electrostatic Deflect- ing Type.	54
3-5. The Magnetic Deflecting Type Oscillograph	60
3-6. Effect of Relativity Mass Correction	62
3-7. Application of the Oscillograph.	65
3-8. Focusing of Electron Beams	68
3-9. Anode Rays	71
3-10. Television	74
 IV. THE MOLECULAR THEORY OF GASES.	 81
4-1. Introduction.	81
4-2. Experimental Basis of Gas Theory: The General Gas Law for Ideal Gases.	82
4-3. The Kinetic Picture of a Perfect Gas	84

CHAPTER		PAGE
4-4.	Elementary Calculation of Pressure and Molecular Speed.	85
4-5.	Avogadro's Hypothesis	88
4-6.	Temperature and Molecular Energy and Speed.	90
4-7.	Mixed Gases.	91
4-8.	Distribution of Molecular Velocities: Introduction	93
4-9.	Maxwell's Deduction of the Velocity Distribution Laws .	97
4-10.	Representation of Maxwell's Distribution Laws.	102
4-11.	The Root-mean-square and Arithmetical Average Speeds	106
4-12.	Free Paths of Molecules and Electrons.	109
4-13.	Law of Distribution of Free Paths.	114
4-14.	Calculation of the Number of Molecules Crossing a Plane Surface	118
4-15.	Evaporation of Electrons from Metals, or Thermionic Emission.	120
V.	CONDUCTION PROCESSES	125
5-1.	Conductivity in the Normal State.	125
5-2.	Ionizing and Deionizing Agents.	126
VI.	ELECTRON EMISSION: THEORY AND TYPICAL APPLICATIONS. . .	135
6-1.	Thermionic Emission: Qualitative Observations and Theories.	135
6-2.	Theory of Electrons in Metals and of the Thermionic Emission of Electrons.	138
6-3.	Temperature-limited Emission	147
6-4.	Electron Emission from Composite Surfaces: Practical Emitters.	149
6-5.	Contact Difference of Potential.	160
6-6.	The Schottky Effect. Field Emission.	162
6-7.	Space-charge-limited or -controlled Electron Currents . .	167
6-8.	Typical Applications of the High-vacuum Diode: Recti- fiers; Voltmeters	174
6-9.	Grid Control of Electron Space-current: The High- vacuum Triode.	177
6-10.	Secondary-electron Emission Caused by Electron Impact	186
6-11.	Multigrid Thermionic Tubes; Applications of Grid- controlled Tubes	191
6-12.	Photoelectric Electron Emission	206
6-13.	Photoelectric Tubes and Their Application.	213
6-14.	Secondary Electron Emission Caused by Positive-ion Impact	220
VII.	DEIONIZING PROCESSES	225
7-1.	Electric Field—Mobility.	225
7-2.	Diffusion.	235
7-3.	Recombination in the Gas	244
7-4.	Recombination at Walls and Electrodes	254

CHAPTER	PAGE
VIII. PRODUCTION OF IONS IN THE GAS	259
8-1. Ionization Energies and Photoelectric Ionization in the Gas.	259
8-2. Thermal Ionization	263
8-3. Ionization by Collisions of Electrons with Gas Atoms	265
8-4. Ionization by Collisions of Positive Ions with Gas Atoms	268
8-5. The Townsend Discharge	270
8-6. The Ionizing Coefficients α and γ	279
IX. SPARKING POTENTIAL, SPARK-OVER, AND CORONA DISCHARGE.	287
9-1. Types of Discharge	287
9-2. Sparking Potential in a Uniform Field. Paschen's Law	290
9-3. Sparking Intensity in a Uniform Field.	296
9-4. Sparking in Vacuum, in Gases under High Pressure, and in Mixed Gases.	298
9-5. Sparking, Corona, and Breakdown in Nonuniform Fields	301
9-6. Sparking and Corona between Concentric Cylinders and between Parallel Wires in Air.	305
9-7. Corona Loss on Transmission Lines	308
X. THE GLOW DISCHARGE.	311
10-1. Introduction.	311
10-2. The Cathode, or Crookes, Dark Space.	316
10-3. The Negative Glow and the Faraday Dark Space.	325
10-4. The Uniform Positive Column	327
10-5. The Striated Positive Column	334
10-6. Determination of Positive-column Characteristics.	387
10-7. The Anode in the Glow	344
10-8. Stability of Discharges.	345
10-9. Applications of the Glow Discharge.	348
XI. THE ARC DISCHARGE	357
11-1. Introduction.	357
11-2. Total Arc Characteristics	363
11-3. The Arc Positive Column	368
11-4. The Cathode of the Arc	379
11-5. Dynamic Arc Characteristics.	386
11-6. The Arc Oscillator	388
11-7. Alternating-current Arc Characteristics	393
11-8. Extinction of Arcs	397
11-9. Circuit Interrupters.	403
11-10. Mercury-arc Rectifiers.	414
11-11. Arc-backs in Mercury-arc Rectifiers	420
11-12. Thermionic Gas Diode: The Phanotron	424
11-13. Thermionic Gas Triode: The Thyatron	431
11-14. Thyatron Applications	436
11-15. The Ignitron.	443

CHAPTER	PAGE
11-16. Inverters.	446
11-17. Gaseous-discharge Lamps	450
APPENDICES	461
I. List of Symbols.	461
II. Important Constants	464
III. Molecular Weights, and Molecular Speeds and Mean Free Paths at Standard Conditions	465
INDEX.	467
