

TABLE OF CONTENTS

<i>Preface</i>	v
--------------------------	---

Chapter I. INTRODUCTION

1. The Purpose of an Introductory Course in the Theory of Functions	1
2. Fundamental Logical Notions.	2
3. The Class Calculus.	7
4. Relations and Functions	11
5. Résumé of the Symbols for Logical Connectives.	12
6. Remarks on Various Bases for Logic.	14
References	15

Chapter II. THE REAL NUMBER SYSTEM

1. Introduction	17
2. The Natural Numbers	18
3. Groups and Semigroups	23
4. The Embedding of a Semigroup in a Group.	24
5. The Positive Rational Numbers.	26
6. Linearly Ordered Sets	27
7. Dedekind Cuts	28
8. Construction of the Real Number System.	29
9. Properties Characterizing the Real Number System	33
10. Additional Properties of the Real Number System.	35
References	39

Chapter III. POINT SETS

1. Space of k Dimensions	40
2. Examples of Point Sets.	41
3. Operations on Aggregates.	42
4. Some Fundamental Definitions and Theorems of Point Set Theory	43
5. Sequences of Points, and The Weierstrass-Bolzano Theorem	49
6. The Heine-Borel Theorem	51
References	52

Chapter IV. FUNCTIONS AND THEIR LIMITS.
PROPERTIES OF CONTINUOUS FUNCTIONS

1. Introduction	54
2. Upper and Lower Bounds and Limits of Functions.	56
3. Continuous and Semicontinuous Functions	63
References	68

Chapter V. FUNDAMENTAL THEOREMS ON
DIFFERENTIATION

1. Functions of One Variable	69
2. Differentiation of Functions of Several Variables.	75
3. Indeterminate Forms.	81
References	84

Chapter VI. THE RIEMANN INTEGRAL

1. Conditions for the Existence of the Integral.	85
2. The Fundamental Theorem of Integral Calculus.	90
3. Further Properties of the Integral	94
References	97

Chapter VII. UNIFORM CONVERGENCE

1. The Cauchy Condition for Uniform Convergence	98
2. Interchange of Order in Repeated Limits.	100
3. Infinite Series.	107
4. The Space of Continuous Functions	116
5. Discontinuous Functions	126
References	132

Chapter VIII. FUNCTIONS DEFINED IMPLICITLY

1. Introduction	134
2. Solutions Defined near an Initial Solution.	135
3. Maximal Sheets of Solutions	141
4. An Extended Implicit Function Theorem.	144
5. Implicit Function Theorems without Differentiability	145
References	150

Chapter IX. ORDINARY DIFFERENTIAL EQUATIONS

1. Conditions Ensuring the Existence of Solutions	151
2. Special Properties of Linear Homogeneous Differential Equations	161

3. An Embedding Theorem, and the Differentiability of Solutions.	163
4. First Integrals.	168
5. Equations in the Form $F(x, y, y') = 0$	170
References	172

Chapter X. THE LEBESGUE INTEGRAL

1. Introduction	173
2. Point Sets and Functions of Intervals	174
3. Definition and Properties of the Integral	180
4. Measurable Sets and Functions	195
5. Differentiation of Functions of One Variable	201
6. The Fundamental Theorem of Integral Calculus.	207
7. Rectifiable Curves.	211
References	214

Chapter XI. THE LEBESGUE INTEGRAL

1. Differentiation with Respect to a Parameter	215
2. Fubini's Theorem on Reduction of Multiple to Repeated Integrals	215
3. Integration by Parts.	220
4. Change of Variables	221
5. Integrals over Unbounded Domains	227
6. Invariance of Lebesgue Integrals and Lebesgue Measure of Sets under Motion.	230
7. Mean Value Theorems.	230
8. The Inequalities of Schwarz, Hölder, and Minkowski.	232
9. Nagumo's Criterion for Uniform Absolute Continuity.	235
10. Modes of Convergence.	236
11. Orthonormal Systems in the Space $\mathfrak{L}_2$	247
12. Additional Theorems on Differentiation.	252
13. Integral Means	254
References	259

Chapter XII. THE STIELTJES INTEGRAL

1. Definitions and First Properties.	260
2. Functions of Bounded Variation.	267

3. Further Definitions and Relations between Integrals. . .	269
4. Convergence Theorems.	281
5. Linear Continuous Operations on the Space $\mathfrak{C}$	292
6. Remarks on Improper, Multiple, and Repeated Stieltjes Integrals	295
References	296
<i>Index</i>	297
