CONTRIBUTORS TO VOLUME VIII	v
PREFACE.	vii

Some New Applications and Techniques of Molecular Beams

BY JOHN G. KING AND JERROLD R. ZACHARIAS, *Department of Physics and Research
Laboratory of Electronics, Massachusetts Institute of Technology,
Cambridge, Massachusetts*

I. Introduction	2
II. Sources of Neutral Molecular Beams.	12
III. Detectors of Beams of Neutral Molecules.	32
IV. Deflecting and Uniform Fields	61
V. Radio-Frequency Equipment	73
VI. Miscellany	77
References	83

Field Emission

BY W. P. DYKE AND W. W. DOLAN, *Linfield College, McMinnville, Oregon*

I. Introduction	90
II. Field-Emission Theory.	91
III. Experimental Test of Field-Emission Theory	96
IV. The Field-Emission Initiated Vacuum Arc	122
V. Field-Emission Microscopy.	128
VI. Electrical Stability and Cathode Life.	163
VII. Progress towards Practical Application.	168
VIII. Experimental Techniques.	172
References	182

Mass Spectroscopy

BY LARKIN KERWIN, *Université Laval, Québec, Canada*

I. Introduction	188
II. Instrumentation.	189
III. Applications	233
References	246

Amplitude and Time Measurement in Nuclear Physics

BY E. BALDINGER, *University of Basel, Basel, Switzerland* AND W. FRANZEN,
University of Rochester, Rochester, N. Y.

I. Introduction	256
II. Amplitude Measurement of Signals of Variable Duration.	256
III. Signal and Noise in Amplifiers and Physical Instruments.	268
IV. The Timing of Nuclear Events	289
References	314

Pulse Amplitude Analysis

BY J. L. W. CHURCHILL, *Sunvic Controls, Ltd., Harlow, Essex, England*
AND S. C. CURRAN, *Department of Natural Philosophy, Glasgow University,*
Glasgow, Scotland

I. Introduction	317
II. The Proportional Counter	318
III. The Scintillation Spectrometer	324
IV. Requirements.	327
V. Voltage Discrimination.	330
VI. Voltage-to-Length Conversion Analyzers	345
VII. Voltage-to-Time Conversion Analyzers.	353
VIII. Alternative Methods of Data Presentation in Amplitude-to-Time Conversion Analyzers	359
IX. Conclusion.	360
References	361

Electron Guns and Focusing for High-Density Electron Beams

BY CHARLES SÜSSKIND, *Division of Electrical Engineering, University of California,*
Berkeley, California

I. Introduction	363
II. The Pierce Method and Its Modifications	364
III. Improvements of the Pierce Design Method	372
IV. Focusing Methods.	377
V. New Gun Configurations.	383
VI. Effect of Density Modulation; Space-Charge-Balanced Flow	395
References	400

On the Electrical Life of an Oxide-Cathode Receiving Tube

BY G. H. METSON, *Thermionics Group of the Post Office Engineering Research Station,*
Dollis Hill, London, England

I. Introduction	404
II. Present Pattern of Electrical Failure.	406
III. Microchemical Actions in the Oxide Cathode	407
IV. Review of Failures Arising from Growth of Conducting Films on Essential Insulating Surfaces	427
V. Heater-Cathode Insulation Failure.	432
VI. Review of Some Outstanding Problems.	439
References	446

Viewing Storage Tubes

BY M. KNOLL AND B. KAZAN, *RCA Laboratories, Princeton, New Jersey*

I. Introduction	448
II. Description of Typical Viewing Storage Tubes	448
III. Electron Transmission Characteristics of Image Amplifier Section	452
IV. Electron Optical Requirements for the Image-Amplifier System.	456
V. Brightness, Resolution, and Writing Speed	465
VI. Elimination of Picture Disturbances Originating in the Image-Amplifier System.	468

VII. Storage Surface Potential Shifts During Operation	483
VIII. Viewing Duration and Methods for Increasing It	493
References	499

Magnetron Mode Transitions

By E. C. OKRESS, *Westinghouse Electric Corporation, Elmira, N. Y.*

I. Introduction	503
II. Instability-Voltage Criterion	508
III. Mode-Competition Criterion	513
IV. Mode-Stability Criterion	517
V. Assessment and Ramifications	524
References	531
Author Index	541
Subject Index	555
