

CONTENTS

Foreword	viii
Preface	x
Acknowledgements	xii
List of Abbreviations	xiii
Chapter 1	1
Acid and Bases	
1.1 Acid base concept	
1.1.1 Arrhenius concept	
1.1.2 Bronsted and Lowry concept	
1.1.3 The Lewis-acid base system	
1.2 Factors affecting relative strength of acids and bases	
1.2.1. Resonance effect	
1.2.2 Inductive effect	
1.2.3 Hydrogen bonding effect	
1.2.4 Effect due to the orbital nature of electron pair	
1.2.5 Steric effect	
1.2.6. Effect of bond length	
1.2.7 Effect of bond strength	
1.2.8 The oxidation state of the central atom	
1.2.9 Solvent effect	
Chapter 2	23
Determination of Reaction Mechanism	
2.1 Introduction	
2.2 Chemical bond cleavage	
2.3 Classification of organic reactions	
2.4 Elucidation of mechanism of organic reaction	

- 2.4.1 Kinetic Data
- 2.4.2 Reaction rate theory
- 2.4.3 Energy profile diagram for a reaction
- 2.4.4 Thermodynamic data
- 2.4.5 Linear free energy relationship
- 2.4.6 Influence of solvents
- 2.4.7 Effect of salt on reaction rate or kinetic salt effect
- 2.4.8 Isotopic effect on reaction rate
- 2.4.9 Steric effects
- 2.5 Kinetic interpretation of reaction mechanism
- 2.6 Entropy of activation and mechanism
- 2.7 Chemical evidence for reaction mechanism
 - 2.7.1 Isolation of products
 - 2.7.2 Isotopic labeling
 - 2.7.3 Testing possible intermediates
 - 2.7.4 Trapping of intermediates
 - 2.7.5 Crossover experiments
- 2.8 Stereochemical studies

Chapter 3 171

Reaction Intermediates

- 3.1 Introduction
- 3.2 Carbocations
- 3.3 Carbanions
- 3.4 Free radicals
- 3.5 Carbenes
- 3.6 Nitrenes
- 3.7 Benzynes
- 3.8 Ylides
- 3.9. Enamines
- 3.10 Nitrile oxides
- 3.11 Nitrile imines
- 3.12 Nitrosoolefins
- 3.13 Azoalkenes

Chapter 4	306
Probable NET Questions	
Answers
