Preface	ix
---------------	----

Unit 01: Introduction to Energy Efficiency

Chapter 01 - Energy and Power

1.1. Definition of Energy and Power	3
1.2. Basics of Thermal Efficiency	12
1.3. Homework	24
References	29

Chapter 02 - Wheeled Vehicles

2.1. Thermal Efficiency of Internal Combustion Engines	31
2.2. Rolling and Aerodynamic Drag for Wheeled Vehicles	32
2.3. Trains	56
2.3.1. Summary for Wheeled Vehicles	58
2.4. Homework	58
References	66

Chapter 03 - Boats and Ships

3.1. Drag Force for Boats and Ships	67
3.1.1. Brief Derivation of the Froude Analysis for Ships	68
3.1.2. Propellers	78
3.2. Homework	84
References	87

Chapter 04 - Airplanes, Jets, and Rockets

4.1. Drag Force for Airplanes and Jets	89
4.2. Fuel Economy of Airplanes	91

4.3. Fuel Economy of Turbojet and Turbofan Aircraft	99
4.4. Fuel Economy of Rockets	106
4.5. Homework	111
Reference	115

Unit 02: Energy and the Environment

Chapter 05 - United States and World Energy Consumption

References	131
------------------	-----

Chapter 06 - Combustion of Fossil Fuels

6.1. Introduction	133
6.2. A Theory for Global Warming	135
6.3. Combustion of Natural Gas	141
6.4. Combustion of Diesel Fuel	143
6.5. Combustion of Coal	147
6.5.1. Carbon Emissions for Common Items	152
6.6. Homework	153
References	157

Chapter 07 - The Electric Power Grid

7.1. Introduction	159
7.1.1. Why Electricity?	161
7.1.2. Base Load Power	161
7.1.3. Peak Load Power	161
7.1.4. Sources of Electricity	162
7.2. Nuclear Power	165
7.3. Hydroelectric Power	166
7.4. Wind Power	168
7.5. Solar Power	177

7.5.1. Angle of Declination	177
7.5.2. Hour Angle	181
7.5.3. Hour Angle Definition	182
7.5.4. Process for Tilted Arrays.	185
7.6. Solar Array Power Equation	188
Homework	190
References	192

Chapter 08 - Greenhouse Gases and How They Impact the Temperature of the Earth

8.1. Radiative Heat Transfer of Earth.	193
8.2. Carbon Dioxide Portion of GHG Absorption	198
8.3. Keeling Curve	201
Homework	204
References	205

Chapter 09 - Fundamentals of Batteries

9.1. Introduction	207
9.2. Battery Efficiency.	209
9.2.1. Charging the Battery.	211
9.2.2. Discharging the Battery	211
9.2.3. Measuring State of Charge	213
9.3. Battery Capacity and Efficiency.	213
9.4. Battery Chemistry	218
9.4.1. Lead-Acid Batteries	218
9.4.2. Silver-Zinc Batteries	222
9.4.3. Nickel-Cadmium Batteries.	223
9.4.4. Nickel-Hydrogen Batteries.	224
9.4.5. Nickel-Metal Hydride Batteries.	226
9.4.6. Lithium Batteries	226
9.4.7. Lithium-Ion Batteries.	226
9.4.8. Solid-State Lithium Batteries	229
9.4.9. Lithium Iron Phosphate Batteries	229
9.4.10. Flow Batteries	230
9.4.11. Polymer Electrolyte Membrane (PEM) Fuel Cells	232

9.4.12. Production of Hydrogen Fuel.	233
9.4.13. Storing and Transporting Hydrogen	235
9.5. Homework	235
References	240

Unit 03: Detailed Modeling of Vehicle Efficiency

Chapter 10 - Performance and Efficiency of Internal Combustion Engines

10.1. Engine Maps	243
Homework	262

Chapter 11 - Simulation of Fuel Economy for City, Suburban, and Highway Driving

11.1. Gasoline Engine Efficiency.	265
11.2. General Approach to Model Engine Thermal Efficiency	269
11.3. Efficiency of Electric Motors	270
11.4. Simulation of Fuel Economy	271
Homework	291
11.5. Effect of Hills on Fuel Economy	294
11.6. Effect of Climate Control Systems on Vehicle Energy Consumption	298
11.7. Development of a Highway Model	304
11.8. Summary of Unit 3	308
Homework	309
References	310

Chapter 12 - Review of the Book (Course)

12.1. Review of Unit 3	311
Index	329
About the Author	333
