Preface	xv
About the editor	xvii
1 Wireless power transfer across small gaps	1
<i>Jiafeng Zhou and Jinyao Zhang</i>	
1.1 Inductive coupling WPT	1
1.1.1 Magnetic induction coupling	1
1.1.2 Resonant inductive coupling	2
1.1.3 Wireless transformer pads	4
1.2 Capacitive coupling WPT	5
1.3 Microwave power transfer	6
1.4 WPT for portable device charging	8
1.4.1 Alignment methods	9
1.4.2 Vertical charging	10
1.4.3 Quadcopter charging	12
1.5 WPT for EV charging	13
1.5.1 Static WPT	13
1.5.2 Quasi-dynamic WPT	14
1.5.3 Dynamic WPT	15
1.6 WPT for implantable bioelectronics	19
1.6.1 Inductively coupled power transfer	20
1.6.2 Capacitively coupled power transfer	23
1.7 Summary	25
References	26
2 Magnetic confinement fusion power	29
<i>Howard Wilson</i>	
2.1 Fusion energy basics	29
2.1.1 Fusion power and its benefits	29
2.1.2 Fusion energy – the conditions	31
2.1.3 Plasma	33
2.2 Confinement systems	34
2.3 Tokamak physics	39
2.3.1 Plasma heating schemes	40
2.3.2 Confinement physics	42
2.3.3 Plasma exhaust	47
2.4 Tokamak materials and technologies	52
2.4.1 Materials science	52

2.4.2	Tritium breeding	55
2.4.3	Tritium cycle and helium ash	55
2.4.4	Enabling technologies	56
2.5	Conclusion – the pathway to fusion delivery	57
	References	62
3	The role of metamaterials in future electromagnetic technologies	65
	<i>Rebecca Seviour and Jonathan Gratus</i>	
3.1	Introduction	65
3.2	History	66
3.3	Constitutive relations	67
3.3.1	Artificial dielectrics	69
3.3.2	Artificial magnetic media	70
3.3.3	Double negative media	72
3.4	Applications	73
3.4.1	Antennas	73
3.4.2	Lenses	74
3.4.3	Active materials	74
3.4.4	Electromagnetic wave profile shaping	75
3.4.5	Stealth materials	76
	References	77
4	Future developments in superconducting motors and flux pumps	81
	<i>Tim Coombs</i>	
4.1	History	83
4.1.1	Materials	85
4.1.2	Motivation	86
4.1.3	Types	89
4.2	Summary of Developments	93
4.2.1	Flux pumping	94
4.2.2	Significance	101
4.2.3	Future	102
4.3	Conclusion	104
	References	104
5	Magnetic levitation technologies	107
	<i>Peter Berkelman</i>	
5.1	Introduction	107
5.2	Concepts and models	109
5.2.1	Lorentz forces	110
5.2.2	Magnetic dipole model	111
5.2.3	Induced currents	112
5.2.4	Rigid-body motion	113
5.3	Methods	113
5.3.1	Feedback control	113
5.3.2	Sensing methods	115

5.3.3	Modelling	117
5.3.4	Coil and magnet configurations	117
5.3.5	Exotic levitation methods	121
5.4	Applications	121
5.4.1	Transportation	122
5.4.2	Precision material handling and motion control	124
5.4.3	Wind tunnel suspension	124
5.4.4	Medical applications	125
5.4.5	Haptic interaction	125
5.5	Potential future directions	126
5.5.1	Superconducting materials	126
5.5.2	Airless tunnels	126
5.5.3	Medical capsules	127
5.6	Discussion and conclusions	127
	References	128
6	Future electrostatic technologies	131
	<i>Jeremy Smallwood</i>	
6.1	Static electricity and its effects	132
6.1.1	How static electricity works	132
6.1.2	Triboelectrification, grounding and earthing	134
6.1.3	Induction	137
6.1.4	Movement of particles in an electrostatic field	139
6.2	Electrostatics in healthcare environments	140
6.2.1	Background	140
6.2.2	Particle deposition and infection control	141
6.2.3	Electrostatic charging of people and mobile equipment	144
6.2.4	Malfunction of electronics equipment	144
6.2.5	Electrostatic spraying of disinfectant	146
6.2.6	Ignition of flammable materials	148
6.2.7	The IEC 61340-6-1 standard	148
6.3	Future benefits	150
	Acknowledgements	151
	References	152
7	The electromagnetic propulsion of future spacecraft	157
	<i>Andrew Michael Chugg</i>	
7.1	Introduction	157
7.2	Factors governing the speed achievable by spacecraft drives	157
7.3	Chemical engines with liquid or solid propellants	159
7.4	High exhaust velocity engines	159
7.5	Light beams	160
7.6	Light sources	160
7.7	Light sail design	161
7.8	Light sail performance	163
7.9	Light sail cooling	164
7.10	The problem of deceleration in interstellar space	165

7.11	Exploiting magnetospheric drag	167
7.12	The ionization of paths through neutral hydrogen	175
7.13	Parameters of a realistic spacecraft	175
7.14	Targeting the light sail	178
7.15	Early adoption within the solar system	178
7.16	Conclusions	179
	References	180
8	The future evolution of liquid crystal devices and photonics	183
	<i>Garry Lester</i>	
8.1	Photonics in society	183
8.2	Liquid crystal technologies	184
8.2.1	Key liquid crystal properties	184
8.2.2	Liquid crystal phases	185
8.2.3	Liquid crystal devices	186
8.2.4	Simplest LCD	186
8.2.5	Dual frequency and negative delta epsilon materials	189
8.2.6	LCDs for visual displays	189
8.2.7	Matrix addressing schemes	190
8.2.8	In-plane switching and vertically aligned nematic (VAN) device configurations	191
8.2.9	Chirality and chiral liquid crystal phases	191
8.2.10	Smectic and ferroelectric devices	192
8.2.11	Blue phases	193
8.2.12	Optically scattering and other devices	194
8.3	Liquid crystal non-display devices	195
8.3.1	Patterned electrode devices	195
8.3.2	Optical elements modulated by a liquid crystal	195
8.3.3	Optically switched optical devices	196
8.3.4	Prismatic beam steerers	197
8.4	Future liquid crystal electro-optic technologies	198
8.4.1	Technologies currently in research and development	198
8.4.2	Materials and switching effects across the spectrum	200
8.4.3	Longer term future application areas	203
8.5	Summing up	209
	References	210
9	Novel and advanced particle accelerators	213
	<i>Graeme Burt, Laura Corner and Rebecca Seviour</i>	
9.1	Introduction to accelerators	213
9.2	Superconductivity and particle accelerators	215
9.2.1	Background	215
9.2.2	Resistance	217
9.2.3	Superconducting materials and particle accelerators	218
9.2.4	Superconducting RF	218
9.2.5	Superconducting thin film RF cavities	220
9.2.6	Alternative materials	221
9.2.7	Superconducting magnets	222

9.3 Novel acceleration structures	223
9.4 Plasma accelerators	228
References	233
10 Prospective technological applications of magnetic monopoles	239
<i>Andrew Michael Chugg</i>	
10.1 Missing magnetic monopoles	239
10.2 Dirac quantization	242
10.3 Chasing chimeric charges	243
10.4 Creating magnetic monopoles	245
10.5 Possible technological exploitation	246
10.6 Conclusions	248
References	249
