

CONTENTS

PREFACE	vii
CHAPTER 1. INTRODUCTION	1
1.1. The Subject	1
1.2. <u>Oil Reservoirs</u>	2
1.3. The Nature of <u>Oil-bearing Rocks</u>	4
1.4. The <u>Confinement of Petroleum Reservoirs</u>	11
1.5. The <u>Structural Classification of Oil Reservoirs</u>	15
1.6. <u>Reservoir Engineering</u>	27
CHAPTER 2. THE PHYSICAL PROPERTIES AND BEHAVIOR OF PETROLEUM FLUIDS	29
2.1. <u>One-component Systems</u>	30
2.2. <u>The Deviation Factors of Pure Hydrocarbon Gases</u>	34
2.3. <u>The Physical Origin of the Deviation Factors; van der Waals' Equation</u>	36
2.4. <u>Two-component Systems</u>	40
2.5. <u>The Behavior of Binary Systems in the Critical Region; Retrograde Phenomena</u>	42
2.6. <u>The Effect of Composition on the Phase Behavior of Binary Systems</u>	49
2.7. <u>Multicomponent Systems; General Characteristics</u>	58
2.8. <u>The Prediction of the Volumetric Behavior of Gas and Crude-oil Systems</u> ...	64
2.9. <u>The Prediction of the Phase Behavior of Complex Hydrocarbon Systems; Equilibrium Ratios</u>	77
2.10. <u>The Application of Equilibrium-ratio Data</u>	87
2.11. <u>The Viscosity of Petroleum Fluids</u>	91
2.12. <u>The Surface and Interfacial Tensions of the Fluids in Oil-bearing Rocks</u>	99
2.13. <u>Oil-field Waters</u>	105
2.14. <u>Summary</u>	105
CHAPTER 3. THE PROPERTIES OF OIL-BEARING FORMATIONS PERTAINING TO OIL PRODUCTION; CORE ANALYSIS	114
3.1. Porosity	114
3.2. <u>The Fluid Content of Subsurface Rocks</u>	118
3.3. <u>Salinity</u>	122
3.4. <u>Permeability—Darcy's Law</u>	123
3.5. <u>The Permeability Coefficient—The Darcy</u>	128
3.6. <u>The Measurement of Permeability</u>	131
3.7. <u>The Permeability of "Dirty" Sands</u>	139
3.8. <u>Some Practical Aspects of Core Analysis</u>	142
3.9. <u>Practical Applications and Interpretation of Porosity and Permeability Data</u>	148
3.10. <u>The Interpretation of Fluid-content Data</u>	150

3.11. Connate-water Saturations.....	158
3.12. Core-analysis Results on Porosity and Permeability.....	168
3.13. Summary.....	169
CHAPTER 4. BASIC DYNAMICAL EQUATIONS FOR <u>HOMOGENEOUS-FLUID-FLOW SYSTEMS</u>	
4.1. Introduction.....	177
4.2. The Structure of <u>Hydrodynamic Systems</u>	178
4.3. The <u>Force Reactions of Fluid Systems</u>	181
4.4. The Equations of Motion.....	186
4.5. Other <u>Coordinate Systems</u>	190
4.6. Summary.....	192
CHAPTER 5. INDIVIDUAL WELL PROBLEMS IN UNIFORM STRATA WITH <u>HOMOGENEOUS-FLUID FLOW</u>	
5.1. Radial Flow.....	194
5.2. Unsymmetrical Flow into a Well Bore.....	198
5.3. Wells Just Penetrating Producing Strata; Spherical Flow.....	201
5.4. Partially Penetrating Wells in <u>Isotropic Formations</u> ; <u>Potential Distributions</u>	205
5.5. Partially Penetrating Wells in <u>Isotropic Formations</u> ; <u>Production Capacities</u>	210
5.6. Wells Producing through <u>Casing Perforations</u>	215
5.7. Wells Completed with <u>Slotted Liners</u>	219
5.8. Flow Capacities of Wells Producing by Gravity; <u>Free Surfaces</u>	220
5.9. Water Coning.....	226
5.10. Summary.....	236
CHAPTER 6. STRATA OF NONUNIFORM OR ANISOTROPIC PERMEABILITY WITH <u>HOMOGENEOUS-FLUID FLOW</u>	
6.1. Continuous Permeability Variations.....	241
6.2. Discontinuous Radial Variations in the Permeability.....	242
6.3. <u>Adjacent Beds of Different Permeability</u> ; <u>Fractured Limestones</u>	246
6.4. The Theory of Acid Treatment of Wells Producing from <u>Limestone or Dolomite Reservoirs</u>	250
6.5. The Effect of a <u>Sanded Liner</u> on the Production Capacity of a Well.....	255
6.6. Partially Penetrating Wells in <u>Stratified Horizons</u>	259
6.7. <u>Anisotropic Media</u>	262
6.8. Partially Penetrating Wells in <u>Anisotropic Strata</u>	264
6.9. Summary.....	266
CHAPTER 7. DYNAMICAL FOUNDATIONS FOR <u>HETEROGENEOUS-FLUID-FLOW PHENOMENA</u>	
7.1. The <u>Generalized Permeability Concept</u>	271
7.2. The <u>Permeability-Saturation Relationship for Two-phase Systems</u> ; <u>Gas-Liquid Mixtures</u>	274
7.3. <u>Permeability-Saturation Data</u> for Two-phase Systems; <u>Immiscible Liquids</u>	282
7.4. <u>Permeability-Saturation Data</u> for Three-phase Systems.....	284
7.5. The Physical Interpretation of the <u>Permeability-Saturation Curves</u>	286
7.6. The <u>Direct Implications of the Permeability-Saturation Curves</u> ; The <u>Equilibrium Saturation</u>	296
7.7. The <u>Equations of Motion</u>	302

CONTENTS

xiii

7.8. Capillary Phenomena; Capillary, Displacement, and Threshold Pressures...	304
7.9. The Fluid Distribution in Virgin Reservoirs.....	311
7.10. Dynamical Effects Associated with Capillary Phenomena.....	321
7.11. Summary.....	325

CHAPTER 8. STEADY-STATE HETEROGENEOUS-FLOW SYSTEMS: THE PRODUCTIVITY INDEX..... 333

8.1. Linear Systems.....	334
8.2. Radial Flow; Immobile Water Phase.....	336
8.3. Radial Two-phase-liquid Flow—No Free-gas Flow.....	342
8.4. Radial Three-phase Flow.....	344
8.5. The Productivity Index—Theoretical Considerations.....	347
8.6. Field Measurements of Productivity Indexes.....	350
8.7. The Application of Productivity-index Measurements.....	357
8.8. Summary.....	360

CHAPTER 9. GENERAL RESERVOIR MECHANISMS..... 364

9.1. The Classification of Reservoir Energy and Producing Mechanisms.....	364
9.2. General Performance Characteristics of Oil-producing Reservoirs.....	369
9.3. Water Drives.....	372
9.4. Gas Drives.....	376
9.5. Material-balance Principles—The Basic Equation.....	378
9.6. The Application of the Material-balance Equation—No Water Influx.....	385
9.7. The Application of the Material-balance Equation—Partial Water Drives...	392
9.8. Summary.....	399

CHAPTER 10. GAS-DRIVE RESERVOIRS..... 404

10.1. Introduction.....	404
10.2. The Basic Equations for Solution-gas-drive Reservoir Histories.....	406
10.3. Theoretical Production Histories of Solution-gas-drive Reservoirs.....	411
10.4. The Effect of the Reservoir Fluid and Rock Characteristics on the Production Histories of Solution-gas-drive Reservoirs.....	415
10.5. Gas-drive Reservoirs with Gas Caps but No Gravity Drainage.....	427
10.6. The Declines in Productivity Index and Production Rates in Solution-gas-drive Fields.....	431
10.7. Gas Injection into Gas-drive Reservoirs; Pressure Maintenance.....	437
10.8. The Effect of the Initial Conditions on the Effectiveness of Gas Injection.....	442
10.9. The Material-balance Method of Calculating Gas-drive Reservoir Histories.....	451
10.10. Practical Aspects of Field Data Pertaining to Gas-drive Reservoir Performance.....	453
10.11. Field Data on the Production Decline in Gas-drive Reservoirs.....	456
10.12. Field Observations on General Gas-drive Reservoir Performance.....	462
10.13. Field Experience in Gas-injection Operations.....	470
10.14. General Observations on Gas Injection.....	479
10.15. Gravity Drainage; General Considerations.....	484
10.16. Production Histories under Gravity Drainage and Gas-cap Expansion.....	490
10.17. Field Observations on Reservoir Performance under Gravity Drainage....	495
10.18. Partial-water-drive Reservoirs.....	502
10.19. Summary.....	515

CHAPTER 11. COMPLETE-WATER-DRIVE RESERVOIRS.....	528
11.1. Introduction.....	528
11.2. <u>Simplified Steady-state Treatment of Water Intrusion in Complete-water-drive Reservoirs</u>	530
11.3. <u>The Compressible-liquid Representation of Water-supply Reservoirs</u>	536
11.4. <u>The Pressure History of Complete-water-drive Systems Supplied by Water Reservoirs of Infinite Extent</u>	541
11.5. <u>Infinite Water Reservoirs with Radial Symmetry and Preassigned Pressures at the Circular Water-Oil Boundary</u>	550
11.6. <u>Water Reservoirs of Finite Extent with Radial Symmetry and Circular Water-Oil Boundaries</u>	558
11.7. <u>Nonradial Water-drive Systems</u>	565
11.8. <u>The Electrical Analyzer</u>	568
11.9. <u>The East Texas Field</u>	575
11.10. <u>The Smackover Limestone Fields</u>	583
11.11. <u>Pressure Maintenance by Water Injection; The Midway Field</u>	591
11.12. <u>Further Examples of Gross Water-drive Performance</u>	597
11.13. <u>Bottom-water-drive Reservoirs; The Physical Representation</u>	604
11.14. <u>Bottom-water-drive Reservoirs; Analytical Treatment; Well Capacities</u>	608
11.15. <u>Bottom-water-drive Reservoirs; The Sweep Efficiency and Water-Oil Ratios</u>	612
11.16. <u>The Role of Permeability Anisotropy and Well Spacing in Bottom-water-drive Reservoirs</u>	620
11.17. <u>Some Practical Aspects of Water-drive Performance</u>	625
11.18. <u>Summary</u>	633
 CHAPTER 12. SECONDARY RECOVERY.....	 645
12.1. Introduction.....	645
12.2. <u>The Steady-state Flow Capacity of Direct-line-drive Networks</u>	650
12.3. <u>The Steady-state Flow Capacity of Staggered-line-drive Patterns</u>	654
12.4. <u>The Steady-state Five-spot-pattern Flow Capacity</u>	655
12.5. <u>The Steady-state Flow Capacity of the Seven-spot Pattern</u>	656
12.6. <u>The Steady-state Sweep Efficiencies of Well Networks; The Direct Line Drive</u>	657
12.7. <u>The Steady-state Sweep Efficiency of Staggered Line Drives</u>	659
12.8. <u>The Steady-state Sweep Efficiency of Seven-spot Networks</u>	660
12.9. <u>The Steady-state Pressure Distributions in Well Networks</u>	661
12.10. <u>The Shape of the Injection-fluid Front; Steady-state Theory</u>	665
12.11. <u>The Shapes of Injection-fluid Fronts in Well Networks as Determined by Electrolytic-model Experiments</u>	670
12.12. <u>Limitations of Analytical and Model Studies of Secondary-recovery Fluid-injection Systems</u>	680
12.13. <u>The Transient History of Water-injection Wells</u>	682
12.14. <u>The Interference between Water-injection Wells</u>	686
12.15. <u>Field Experience in Water Flooding</u>	694
12.16. <u>Practical Aspects and Requirements for Water Flooding</u>	700
12.17. <u>Secondary Recovery by Gas Injection; Theoretical Considerations</u>	709
12.18. <u>Field Experience in Gas Injection</u>	715
12.19. <u>Practical Aspects of Secondary-recovery Operations by Gas Injection</u>	720
12.20. <u>Summary</u>	728

CHAPTER 13. <u>CONDENSATE RESERVOIRS</u>	738
13.1. Introduction	738
13.2. General Considerations Regarding Condensate-reservoir <u>Fluids</u>	738
13.3. The <u>Depletion History</u> of <u>Condensate-producing Reservoirs</u>	743
13.4. <u>Cycling—General Considerations</u>	754
13.5. <u>Analytical Determinations of the Sweep Efficiencies of Cycling Patterns</u> ...	755
13.6. The Theory of Potentiometric Models	764
13.7. An Illustrative Application of the Potentiometric Model to Cycling Systems	768
13.8. The Effect of Permeability Stratification in <u>Cycling Operations</u>	771
13.9. <u>Field Observations on Condensate-producing Reservoirs</u>	782
13.10. <u>Practical Aspects of Condensate-reservoir Development</u>	787
13.11. Summary	800

CHAPTER 14. WELL SPACING, RECOVERY FACTORS, AND RE- COVERABLE RESERVES	810
14.1. Introduction	810
14.2. <u>Well Spacing—The Negative Side</u>	811
14.3. <u>Well Spacing—The Positive Side</u>	814
14.4. <u>Physical Considerations Regarding Well Spacing; Water-drive Fields</u>	816
14.5. <u>Physical Aspects of the Well-spacing Problem in Gas-drive Fields; The Physical Ultimate Recovery</u>	820
14.6. <u>Economic Ultimate Recoveries and Well Spacing in Gas-drive Fields</u>	822
14.7. <u>Field Observations on the Relation between Well Spacing and Recovery</u> ...	834
14.8. <u>Interference Phenomena—Transient Effects</u>	846
14.9. <u>Interference Phenomena—Steady-state Geometrical Effects; Small Well Groups</u>	858
14.10. <u>Geometrical Interference Effects in Infinite Well Arrays</u>	862
14.11. <u>Recovery Factors; Recoverable Reserves—The Problem</u>	869
14.12. <u>Recovery Factors in Gas-drive Reservoirs</u>	870
14.13. <u>Recovery Factors in Water-drive Reservoirs</u>	877
14.14. <u>Recovery Factors under Gravity Drainage</u>	885
14.15. <u>Recoverable Reserves</u>	888
14.16. <u>Some Outstanding Problems in the Physics of Oil Production</u>	892
14.17. Summary	896

APPENDIXES

I. Conversion Factors and Various Constants	905
II. Laplace's Equation in Curvilinear Coordinates	907

INDEX	909
