

Contents

1	From Particles to Fields	1
1.1	Motivating the Quantum Field Theory	1
1.2	Quantum Propagation Amplitude for the Non-relativistic Particle	3
1.2.1	Path Integral for the Non-relativistic Particle	4
1.2.2	Hamiltonian Evolution: Non-relativistic Particle	6
1.2.3	A Digression into Imaginary Time	9
1.2.4	Path Integral for the Jacobi Action	13
1.3	Quantum Propagation Amplitude for the Relativistic Particle	17
1.3.1	Path Integral for the Relativistic Particle	17
1.4	Mathematical Structure of $G(x_2; x_1)$	20
1.4.1	Lack of Transitivity	20
1.4.2	Propagation Outside the Light Cone	20
1.4.3	Three Dimensional Fourier Transform of $G(x_2; x_1)$	21
1.4.4	Four Dimensional Fourier Transform of $G(x_2; x_1)$	24
1.4.5	The First Non-triviality: Closed Loops and $G(x; x)$	26
1.4.6	Hamiltonian Evolution: Relativistic Particle	27
1.5	Interpreting $G(x_2; x_1)$ in Terms of a Field	29
1.5.1	Propagation Amplitude and Antiparticles	32
1.5.2	Why do we <i>Really</i> Need Antiparticles?	35
1.5.3	Aside: Occupation Number Basis in Quantum Mechanics	37
1.6	Mathematical Supplement	39
1.6.1	Path Integral From Time Slicing	39
1.6.2	Evaluation of the Relativistic Path Integral	41
2	Disturbing the Vacuum	45
2.1	Sources that Disturb the Vacuum	45
2.1.1	Vacuum Persistence Amplitude and $G(x_2; x_1)$	45
2.1.2	Vacuum Instability and the Interaction Energy of the Sources	50
2.2	From the Source to the Field	52
2.2.1	Source to Field: Via Functional Fourier Transform	53
2.2.2	Functional Integral Determinant: A First Look at Infinity	57
2.2.3	Source to the Field: via Harmonic Oscillators	63
2.3	Mathematical Supplement	64
2.3.1	Aspects of Functional Calculus	64

3	From Fields to Particles	67
3.1	Classical Field Theory	68
3.1.1	Action Principle in Classical Mechanics	68
3.1.2	From Classical Mechanics to Classical Field Theory	70
3.1.3	Real Scalar Field	74
3.1.4	Complex Scalar Field	77
3.1.5	Vector Potential as a Gauge Field	78
3.1.6	Electromagnetic Field	81
3.2	Aside: Spontaneous Symmetry Breaking	87
3.3	Quantizing the Real Scalar Field	90
3.4	Davies-Unruh Effect: What is a Particle?	96
3.5	Quantizing the Complex Scalar Field	101
3.6	Quantizing the Electromagnetic Field	104
3.6.1	Quantization in the Radiation Gauge	105
3.6.2	Gauge Fixing and Covariant Quantization	109
3.6.3	Casimir Effect	115
3.6.4	Interaction of Matter and Radiation	121
3.7	Aside: Analytical Structure of the Propagator	125
3.8	Mathematical Supplement	128
3.8.1	Summation of Series	128
3.8.2	Analytic Continuation of the Zeta Function	129
4	Real Life I: Interactions	131
4.1	Interacting Fields	131
4.1.1	The Paradigm of the Effective Field Theory	132
4.1.2	A First Look at the Effective Action	136
4.2	Effective Action for Electrodynamics	139
4.2.1	Schwinger Effect for the Charged Scalar Field	142
4.2.2	The Running of the Electromagnetic Coupling	143
4.3	Effective Action for the $\lambda\phi^4$ Theory	146
4.4	Perturbation Theory	152
4.4.1	Setting up the Perturbation Series	153
4.4.2	Feynman Rules for the $\lambda\phi^4$ Theory	156
4.4.3	Feynman Rules in the Momentum Space	160
4.5	Effective Action and the Perturbation Expansion	162
4.6	Aside: LSZ Reduction Formulas	164
4.7	Handling the Divergences in the Perturbation Theory	167
4.7.1	One Loop Divergences in the $\lambda\phi^4$ Theory	168
4.7.2	Running Coupling Constant in the Perturbative Approach	171
4.8	Renormalized Perturbation Theory for the $\lambda\phi^4$ Model	176
4.9	Mathematical Supplement	180
4.9.1	L_{eff} from the Vacuum Energy Density	180
4.9.2	Analytical Structure of the Scattering Amplitude	184
5	Real Life II: Fermions and QED	189
5.1	Understanding the Electron	189
5.2	Non-relativistic Square Roots	191
5.2.1	Square Root of $p_\alpha p^\alpha$ and the Pauli Matrices	191
5.2.2	Spin Magnetic Moment from the Pauli Equation	192
5.2.3	How does ψ Transform?	193
5.3	Relativistic Square Roots	195

5.3.1	Square Root of $p_a p^a$ and the Dirac Matrices	195
5.3.2	How does ψ Transform?	197
5.3.3	Spin Magnetic Moment from the Dirac Equation	200
5.4	Lorentz Group and Fields	201
5.4.1	Matrix Representation of a Transformation Group	201
5.4.2	Generators and their Algebra	202
5.4.3	Generators of the Lorentz Group	203
5.4.4	Representations of the Lorentz Group	205
5.4.5	Why do we use the Dirac Spinor?	206
5.4.6	Spin of the Field	208
5.4.7	The Poincare Group	209
5.5	Dirac Equation and the Dirac Spinor	212
5.5.1	The Adjoint Spinor and the Dirac Lagrangian	212
5.5.2	Charge Conjugation	213
5.5.3	Plane Wave solutions to the Dirac Equation	214
5.6	Quantizing the Dirac Field	216
5.6.1	Quantization with Anticommutation Rules	216
5.6.2	Electron Propagator	219
5.6.3	Propagator from a Fermionic Path Integral	222
5.6.4	Ward Identities	224
5.6.5	Schwinger Effect for the Fermions	226
5.6.6	Feynman Rules for QED	231
5.7	One Loop Structure of QED	232
5.7.1	Photon Propagator at One Loop	234
5.7.2	Electron Propagator at One Loop	245
5.7.3	Vertex Correction at One Loop	248
5.8	QED Renormalization at One Loop	250
5.9	Mathematical Supplement	255
5.9.1	Calculation of the One Loop Electron Propagator	255
5.9.2	Calculation of the One Loop Vertex Function	257
A Potpourri of Problems		261
Annotated Reading List		279
