

Contents

1 Basic Techniques of Evoked Potential Recording	1
Basic Principles of EP Recording	1
Stimulus Characteristics	2
Amplification	2
Filtering of the Analog Signal	3
Analog to Digital Conversion	3
Signal Enhancement	6
Limitation of Signal Averaging	8
Strategies to Improve EP Recording	9
Common Problems Encountered During EP Recordings	9
Final Recording, Display, and Storage of EPs	11
Nomenclature of EP Components	11
Measurements	11
Appropriate Use of Certain Stimulating and Recording Parameters	14
Analysis Time	14
Stimulus Rate	15
Filters	16
Sampling Rate	17
AD Convertor	17
Number of Averages	18
Recording Montage	18
Utility of EPs	22
References	23
2 Brainstem Auditory Evoked Potentials	25
Overview of the Technique of Recording BAEPs	26
Normal BAEPs	28
Generators of BAEP Components	30
BAEP Evaluation and Criteria of Abnormalities	34
Evaluation of BAEPs	34
Criteria for Clinically Significant BAEP Abnormality	36
Factors Affecting BAEPs	37
Clinical Applications of BAEPs	48
Coma	48

Demyelinating Disorders	51
Posterior Fossa Tumors	57
Miscellaneous CNS Disorders	61
Intraoperative Monitoring of BAEPs	64
Audiologic Applications of BAEPs in Neonates and Infants	66
Writing BAEP Reports	67
BAEP: Case Studies, Interpretation and Discussion.	70
Case 1: Acoustic Neuroma	70
Case 2: Tinnitus.	72
Case 3: Suspected Brain Death.	73
Case 4: Brainstem Glioma	75
Case 5: Infant with Suspected Hearing Loss	77
Case 6: Multiple Sclerosis	78
References.	80
3 Visual Evoked Potentials	83
Anatomic Considerations	83
Recording Protocol for Full-Field Pattern-Reversal VEP (PRVEP).	85
Patient Management	85
Recording Parameters	86
Normal Pattern-Reversal VEPs.	90
Topographic Characteristics of PRVEP	91
Peripheral Versus Central Visual Field Contribution to Full-Field PRVEP	93
Full-Field PRVEP Measurement.	94
Generators of the PRVEP	97
Criteria for PRVEP Abnormalities	97
Interpretation of PRVEP Abnormalities on Full-Field Stimulation	100
Factors Affecting PRVEPs	102
Pattern-Reversal Hemifield Stimulation	106
Flash VEP	109
Clinical Applications of PRVEPs	112
VEP: Case Studies, Interpretation, and Discussion	124
Case 1: Optic Neuritis.	124
Case 2: Multiple Sclerosis	126
Case 3: Multiple Sclerosis	127
Case 4: Patient with Right Optic Nerve Hypoplasia.	128
Case 5: Psychogenic Blindness.	131
Case 6: Bilateral Visual Loss	134
References.	136
4 Somatosensory Evoked Potentials	139
Neuroanatomic Considerations.	139
Recording Techniques.	141
Recording Electrodes and Montages	143
Overview of Generator Sources of SSEPs	148

Median SSEPs: Obligate Components and Their Generator Sources.	154
Posterior Tibial SSEP: Obligate Components and Their Generator Sources.	159
SSEPs: Measurements	163
Subject Related and Technical Factors Affecting SSEPs	164
SSEP: Criteria of Abnormality	167
SSEPs: Interpretative Guidelines	167
Other Stimulation Techniques.	170
Clinical Applications of SSEPs.	171
SSEPs in CNS Disorders	172
SSEPs in Peripheral Nervous System Disorders.	184
SSEPs in Spinal Cord Lesions	187
SSEP in Miscellaneous CNS Disorders	189
Intraoperative Monitoring of SSEPs.	191
SSEP in Conversion Disorder.	193
SSEPs: Case Studies – Interpretation and Discussion	194
Case Study 1: Severe Anoxic Encephalopathy	194
Case Study 2: Multiple Sclerosis	195
Case Study 3: Probable Conversion Disorder.	198
Case Study 4: Compressive Myelopathy	199
Case Study 5. Achondroplasia	200
Case Study 6. Cervical Radiculomyelopathy	203
