

CONTENTS

Preface

vii

1	Differential geometry	1
1.1	Differentiable manifolds	1
1.2	Tangent vectors and tangent spaces	3
1.3	Tensor algebra	8
1.4	Tensor fields and commutators	12
1.5	Maps of manifolds	14
1.6	Integral curves and Lie derivatives	17
1.7	Linear connections	25
1.8	Geodesics	29
1.9	Torsion and curvature	32
1.10	The pseudo-riemannian metric	40
1.11	Newtonian spacetimes	46
1.12	Special relativity	52
1.13	The general theory of relativity	55
2	Spinors	62
2.1	Introduction	62
2.2	Spinor algebra	64
2.3	Spinors and vectors	71
2.4	The Petrov classification	76
2.5	Spinor analysis	80
2.6	The Newman-Penrose formalism	89
2.7	Focussing and shearing	96
2.8	Goldberg Sachs et al.	100
2.9	Plane and plane-fronted waves	105

3	Asymptopia	113
3.1	Introduction	113
3.2	Asymptopia for Minkowski spacetime	116
3.3	Asymptotic simplicity	122
3.4	Conformal transformation formulae	124
3.5	Scri and peeling	127
3.6	The choice of conformal gauge	131
3.7	A spin basis adapted to \mathcal{I}	133
3.8	Asymptotic symmetry	139
3.9	Spin-weighted spherical harmonics	143
3.10	Asymptotic solution of the field equations	149
3.11	The Bondi 4-momentum covector	155
3.12	The positivity of the Bondi mass	160
4	The characteristic initial value problem	167
4.1	Quasilinear first order hyperbolic systems of equations	167
4.2	The Cauchy problem	173
4.3	The characteristic initial value problem	177
4.4	The conformal vacuum field equations of general relativity	183
4.5	Lagrangian and Legendrian maps	193
4.6	Wavefronts and wavefront families	198
4.7	Caustics in Minkowski spacetime	201
	Appendix A Dirac spinors	213
	Appendix B The Newman-Penrose formalism	216
	<i>References</i>	222
	<i>Index</i>	225
