

# CONTENTS

List of Figures and Tables	xiii
Preface	xvii
Acknowledgments	xxi
How to Read This Book	xxiii
<b>I Spacetime Geometry</b>	<b>1</b>
1 Spacetime	3
1.1 Line Elements . . . . .	3
1.2 Circle Trigonometry . . . . .	6
1.3 Hyperbola Trigonometry . . . . .	7
1.4 The Geometry of Special Relativity . . . . .	8
<b>2 Symmetries</b>	<b>11</b>
2.1 Position and Velocity . . . . .	11
2.2 Geodesics . . . . .	13
2.3 Symmetries . . . . .	14
2.4 Example: Polar Coordinates . . . . .	15
2.5 Example: The Sphere . . . . .	16

3	Schwarzschild Geometry	19
3.1	The Schwarzschild Metric . . . . .	19
3.2	Properties of the Schwarzschild Geometry . . . . .	20
3.3	Schwarzschild Geodesics . . . . .	21
3.4	Newtonian Motion . . . . .	23
3.5	Orbits . . . . .	25
3.6	Circular Orbits . . . . .	29
3.7	Null Orbits . . . . .	31
3.8	Radial Geodesics . . . . .	34
3.9	Rain Coordinates . . . . .	35
3.10	Schwarzschild Observers . . . . .	39
4	Rindler Geometry	41
4.1	The Rindler Metric . . . . .	41
4.2	Properties of Rindler Geometry . . . . .	41
4.3	Rindler Geodesics . . . . .	43
4.4	Extending Rindler Geometry . . . . .	45
5	Black Holes	49
5.1	Extending Schwarzschild Geometry . . . . .	49
5.2	Kruskal Geometry . . . . .	51
5.3	Penrose Diagrams . . . . .	55
5.4	Charged Black Holes . . . . .	58
5.5	Rotating Black Holes . . . . .	59
5.6	Problems . . . . .	61
II	General Relativity	65
6	Warmup	67
6.1	Differential Forms in a Nutshell . . . . .	67
6.2	Tensors . . . . .	72
6.3	The Physics of General Relativity . . . . .	73
6.4	Problems . . . . .	75
7	Geodesic Deviation	79
7.1	Rain Coordinates II . . . . .	79
7.2	Tidal Forces . . . . .	80
7.3	Geodesic Deviation . . . . .	83
7.4	Schwarzschild Connection . . . . .	84
7.5	Tidal Forces Revisited . . . . .	85

8	Einstein's Equation	87
8.1	Matter . . . . .	87
8.2	Dust . . . . .	89
8.3	First Guess at Einstein's Equation . . . . .	91
8.4	Conservation Laws . . . . .	93
8.5	The Einstein Tensor . . . . .	95
8.6	Einstein's Equation . . . . .	97
8.7	The Cosmological Constant . . . . .	98
8.8	Problems . . . . .	99
9	Cosmological Models	101
9.1	Cosmology . . . . .	101
9.2	The Cosmological Principle . . . . .	101
9.3	Constant Curvature . . . . .	103
9.4	Robertson–Walker Metrics . . . . .	105
9.5	The Big Bang . . . . .	107
9.6	Friedmann Models . . . . .	108
9.7	Friedmann Vacuum Cosmologies . . . . .	109
9.8	Missing Matter . . . . .	110
9.9	The Standard Models . . . . .	111
9.10	Cosmological Redshift . . . . .	113
9.11	Problems . . . . .	115
10	Solar System Applications	119
10.1	Bending of Light . . . . .	119
10.2	Perihelion Shift of Mercury . . . . .	122
10.3	Global Positioning . . . . .	125
III	Differential Forms	127
11	Calculus Revisited	129
11.1	Differentials . . . . .	129
11.2	Integrands . . . . .	130
11.3	Change of Variables . . . . .	131
11.4	Multiplying Differentials . . . . .	132
12	Vector Calculus Revisited	135
12.1	A Review of Vector Calculus . . . . .	135
12.2	Differential Forms in Three Dimensions . . . . .	138
12.3	Multiplication of Differential Forms . . . . .	139

12.4	Relationships between Differential Forms . . . . .	140
12.5	Differentiation of Differential Forms . . . . .	141
13	The Algebra of Differential Forms . . . . .	143
13.1	Differential Forms . . . . .	143
13.2	Higher-Rank Forms . . . . .	144
13.3	Polar Coordinates . . . . .	145
13.4	Linear Maps and Determinants . . . . .	146
13.5	The Cross Product . . . . .	147
13.6	The Dot Product . . . . .	149
13.7	Products of Differential Forms . . . . .	149
13.8	Pictures of Differential Forms . . . . .	150
13.9	Tensors . . . . .	154
13.10	Inner Products . . . . .	155
13.11	Polar Coordinates II . . . . .	156
14	Hodge Duality . . . . .	157
14.1	Bases for Differential Forms . . . . .	157
14.2	The Metric Tensor . . . . .	157
14.3	Signature . . . . .	159
14.4	Inner Products of Higher-Rank Forms . . . . .	159
14.5	The Schwarz Inequality . . . . .	161
14.6	Orientation . . . . .	162
14.7	The Hodge Dual . . . . .	162
14.8	Hodge Dual in Minkowski 2-space . . . . .	164
14.9	Hodge Dual in Euclidean 2-space . . . . .	164
14.10	Hodge Dual in Polar Coordinates . . . . .	165
14.11	Dot and Cross Product Revisited . . . . .	166
14.12	Pseudovectors and Pseudoscalars . . . . .	167
14.13	The General Case . . . . .	167
14.14	Technical Note on the Hodge Dual . . . . .	168
14.15	Application: Decomposable Forms . . . . .	170
14.16	Problems . . . . .	171
15	Differentiation of Differential Forms . . . . .	175
15.1	Gradient . . . . .	175
15.2	Exterior Differentiation . . . . .	175
15.3	Divergence and Curl . . . . .	176
15.4	Laplacian in Polar Coordinates . . . . .	177
15.5	Properties of Exterior Differentiation . . . . .	178

15.6	Product Rules . . . . .	180
15.7	Maxwell's Equations I . . . . .	181
15.8	Maxwell's Equations II . . . . .	181
15.9	Maxwell's Equations III . . . . .	182
15.10	Orthogonal Coordinates . . . . .	184
15.11	Div, Grad, Curl in Orthogonal Coordinates . . . . .	185
15.12	Uniqueness of Exterior Differentiation . . . . .	187
15.13	Problems . . . . .	188
16	Integration of Differential Forms . . . . .	191
16.1	Vectors and Differential Forms . . . . .	191
16.2	Line and Surface Integrals . . . . .	192
16.3	Integrands Revisited . . . . .	194
16.4	Stokes' Theorem . . . . .	194
16.5	Calculus Theorems . . . . .	196
16.6	Integration by Parts . . . . .	198
16.7	Corollaries of Stokes' Theorem . . . . .	199
16.8	Problems . . . . .	200
17	Connections . . . . .	203
17.1	Polar Coordinates II . . . . .	203
17.2	Differential Forms That Are Also Vector Fields . . . . .	205
17.3	Exterior Derivatives of Vector Fields . . . . .	205
17.4	Properties of Differentiation . . . . .	206
17.5	Connections . . . . .	206
17.6	The Levi-Civita Connection . . . . .	207
17.7	Polar Coordinates III . . . . .	208
17.8	Uniqueness of the Levi-Civita Connection . . . . .	209
17.9	Tensor Algebra . . . . .	210
17.10	Commutators . . . . .	211
17.11	Problems . . . . .	212
18	Curvature . . . . .	215
18.1	Curves . . . . .	215
18.2	Surfaces . . . . .	216
18.3	Examples in Three Dimensions . . . . .	217
18.4	Curvature . . . . .	219
18.5	Curvature in Three Dimensions . . . . .	221
18.6	Components . . . . .	222
18.7	Bianchi Identities . . . . .	223

18.8	Geodesic Curvature . . . . .	224
18.9	Geodesic Triangles . . . . .	226
18.10	The Gauss–Bonnet Theorem . . . . .	228
18.11	The Torus . . . . .	231
18.12	Problems . . . . .	234
19	Geodesics	235
19.1	Geodesics . . . . .	235
19.2	Geodesics in Three Dimensions . . . . .	236
19.3	Examples of Geodesics . . . . .	237
19.4	Solving the Geodesic Equation . . . . .	238
19.5	Geodesics in Polar Coordinates . . . . .	240
19.6	Geodesics on the Sphere . . . . .	241
20	Applications	245
20.1	The Equivalence Problem . . . . .	245
20.2	Lagrangians . . . . .	247
20.3	Spinors . . . . .	249
20.4	Topology . . . . .	250
20.5	Integration on the Sphere . . . . .	252
A	Detailed Calculations	255
A.1	Coordinate Symmetries . . . . .	255
A.2	Geodesic Deviation: Details . . . . .	257
A.3	Schwarzschild Curvature . . . . .	259
A.4	Rain Curvature . . . . .	261
A.5	Components of the Einstein Tensor . . . . .	264
A.6	Divergence of the Einstein Tensor . . . . .	265
A.7	Divergence of the Metric in Two Dimensions . . . . .	267
A.8	Divergence of the Metric . . . . .	268
A.9	Robertson–Walker Curvature . . . . .	269
A.10	Birkhoff’s Theorem . . . . .	271
A.11	The Stress Tensor for a Point Charge . . . . .	274
B	Tensor Notation	277
B.1	Invariant Language . . . . .	277
B.2	Components . . . . .	278
B.3	Index Gymnastics . . . . .	279
	Annotated Bibliography	281
	References	285
	Index	287
