

Contents

Part I Foundations

1	Introduction	3
1.1	What we Cannot Derive	3
1.2	Book Overview	5
1.3	Elementary Particles and Fundamental Forces	7
2	Special Relativity	11
2.1	The Invariant of Special Relativity	12
2.2	Proper Time	14
2.3	Upper Speed Limit	16
2.4	The Minkowski Notation	17
2.5	Lorentz Transformations	19
2.6	Invariance, Symmetry and Covariance	21

Part II Symmetry Tools

3	Lie Group Theory	25
3.1	Groups	26
3.2	Rotations in two Dimensions	29
3.2.1	Rotations with Unit Complex Numbers	31
3.3	Rotations in three Dimensions	33
3.3.1	Quaternions	34
3.4	Lie Algebras	38
3.4.1	The Generators and Lie Algebra of $SO(3)$	42
3.4.2	The Abstract Definition of a Lie Algebra	45
3.4.3	The Generators and Lie Algebra of $SU(2)$	46
3.4.4	The Abstract Definition of a Lie Group	47
3.5	Representation Theory	50
3.6	$SU(2)$	54
3.6.1	The Finite-dimensional Irreducible Representations of $SU(2)$	54

3.6.2	The Representation of $SU(2)$ in one Dimension	61
3.6.3	The Representation of $SU(2)$ in two Dimensions	61
3.6.4	The Representation of $SU(2)$ in three Dimensions	62
3.7	The Lorentz Group $O(1,3)$	62
3.7.1	One Representation of the Lorentz Group	66
3.7.2	Generators of the Other Components of the Lorentz Group	69
3.7.3	The Lie Algebra of the Proper Orthochronous Lorentz Group	70
3.7.4	The $(0,0)$ Representation	72
3.7.5	The $(\frac{1}{2}, 0)$ Representation	72
3.7.6	The $(0, \frac{1}{2})$ Representation	74
3.7.7	Van der Waerden Notation	75
3.7.8	The $(\frac{1}{2}, \frac{1}{2})$ Representation	80
3.7.9	Spinors and Parity	84
3.7.10	Spinors and Charge Conjugation	86
3.7.11	Infinite-Dimensional Representations	87
3.8	The Poincaré Group	89
3.9	Elementary Particles	91
3.10	Appendix: Rotations in a Complex Vector Space	92
3.11	Appendix: Manifolds	93
4	The Framework	95
4.1	Lagrangian Formalism	95
4.1.1	Fermat's Principle	96
4.1.2	Variational Calculus - the Basic Idea	96
4.2	Restrictions	97
4.3	Particle Theories vs. Field Theories	98
4.4	Euler-Lagrange Equation	99
4.5	Noether's Theorem	101
4.5.1	Noether's Theorem for Particle Theories	101
4.5.2	Noether's Theorem for Field Theories - Spacetime Symmetries	105
4.5.3	Rotations and Boosts	108
4.5.4	Spin	110
4.5.5	Noether's Theorem for Field Theories - Internal Symmetries	110
4.6	Appendix: Conserved Quantity from Boost Invariance for Particle Theories	113
4.7	Appendix: Conserved Quantity from Boost Invariance for Field Theories	114

Part III The Equations of Nature

5	Measuring Nature	117
5.1	The Operators of Quantum Mechanics	117
5.1.1	Spin and Angular Momentum	118
5.2	The Operators of Quantum Field Theory	119
6	Free Theory	121
6.1	Lorentz Covariance and Invariance	121
6.2	Klein-Gordon Equation	122
6.2.1	Complex Klein-Gordon Field	124
6.3	Dirac Equation	124
6.4	Proca Equation	127
7	Interaction Theory	131
7.1	$U(1)$ Interactions	133
7.1.1	Internal Symmetry of Free Spin $\frac{1}{2}$ Fields	134
7.1.2	Internal Symmetry of Free Spin 1 Fields	135
7.1.3	Putting the Puzzle Pieces Together	136
7.1.4	Inhomogeneous Maxwell Equations and Minimal Coupling	139
7.1.5	Charge Conjugation, Again	140
7.1.6	Noether's Theorem for Internal $U(1)$ Symmetry	141
7.1.7	Interaction of Massive Spin 0 Fields	142
7.1.8	Interaction of Massive Spin 1 Fields	143
7.2	$SU(2)$ Interactions	143
7.3	Mass Terms and "Unification" of $SU(2)$ and $U(1)$	150
7.4	Parity Violation	158
7.5	Lepton Mass Terms	162
7.6	Quark Mass Terms	165
7.7	Isospin	166
7.7.1	Labelling States	168
7.8	$SU(3)$ Interactions	170
7.8.1	Color	172
7.8.2	Quark Description	173
7.9	The Interplay Between Fermions and Bosons	174

Part IV Applications

8	Quantum Mechanics	177
8.1	Particle Theory Identifications	178
8.2	Relativistic Energy-Momentum Relation	178
8.3	The Quantum Formalism	179
8.3.1	Expectation Value	181

8.4	The Schrödinger Equation	182
8.4.1	Schrödinger Equation with an External Field . . .	185
8.5	From Wave Equations to Particle Motion	185
8.5.1	Example: Free Particle	185
8.5.2	Example: Particle in a Box	186
8.5.3	Dirac Notation	189
8.5.4	Example: Particle in a Box, Again	191
8.5.5	Spin	192
8.6	Heisenberg's Uncertainty Principle	196
8.7	Comments on Interpretations	197
8.8	Appendix: Interpretation of the Dirac Spinor Components	198
8.9	Appendix: Solving the Dirac Equation	203
8.10	Appendix: Dirac Spinors in Different Bases	205
8.10.1	Solutions of the Dirac Equation in the Mass Basis	207
9	Quantum Field Theory	209
9.1	Field Theory Identifications	210
9.2	Free Spin 0 Field Theory	211
9.3	Free Spin $\frac{1}{2}$ Field Theory	216
9.4	Free Spin 1 Field Theory	219
9.5	Interacting Field Theory	219
9.5.1	Scatter Amplitudes	220
9.5.2	Time Evolution of States	220
9.5.3	Dyson Series	224
9.5.4	Evaluating the Series	225
9.6	Appendix: Most General Solution of the Klein-Gordon Equation	229
10	Classical Mechanics	233
10.1	Relativistic Mechanics	235
10.2	The Lagrangian of Non-Relativistic Mechanics	236
11	Electrodynamics	239
11.1	The Homogeneous Maxwell Equations	240
11.2	The Lorentz Force	241
11.3	Coulomb Potential	243
12	Gravity	245
13	Closing Words	251
 Part V Appendices		
A	Vector calculus	255

A.1	Basis Vectors	256
A.2	Change of Coordinate Systems	257
A.3	Matrix Multiplication	259
A.4	Scalars	260
A.5	Right-handed and Left-handed Coordinate Systems	260
B	Calculus	263
B.1	Product Rule	263
B.2	Integration by Parts	263
B.3	The Taylor Series	264
B.4	Series	266
B.4.1	Important Series	266
B.4.2	Splitting Sums	268
B.4.3	Einstein's Sum Convention	269
B.5	Index Notation	269
B.5.1	Dummy Indices	269
B.5.2	Objects with more than One Index	270
B.5.3	Symmetric and Antisymmetric Indices	270
B.5.4	Antisymmetric $\times$ Symmetric Sums	271
B.5.5	Two Important Symbols	272
C	Linear Algebra	273
C.1	Basic Transformations	273
C.2	Matrix Exponential Function	274
C.3	Determinants	274
C.4	Eigenvalues and Eigenvectors	275
C.5	Diagonalization	275
D	Additional Mathematical Notions	277
D.1	Fourier Transform	277
D.2	Delta Distribution	278
	Bibliography	281
	Index	285
