9	Sugra and the Standard Model	2.4	2.4.2 Summary: successes and limitations of the Standard Model	135
9.1	The supersymmetry algebra and its representations	2.4.3	2.4.3.1 The origin of supersymmetry	136
9.2	Superspace	2.4.3.2 The origin of the superspace formalism	136	
	<i>Preface to the First Edition</i>	2.4.4	2.4.4.1 The origin of the superspace formalism	136
	<i>Preface to the Second Edition</i>	2.4.4.2 The origin of the superspace formalism	136	
	<i>A note on the choice of metric</i>	2.4.4.3 The origin of the superspace formalism	136	
	<i>Text website</i>	2.4.4.4 The origin of the superspace formalism	136	
	9.7 Non-renormalization theorems	2.4.5	2.4.5.1 The origin of the superspace formalism	146
	9.8 Suggested reading	2.4.5.2 The origin of the superspace formalism	148	
	Exercises	2.4.5.3 The origin of the superspace formalism	150	
1	<b>1 Before the Standard Model</b>			3
10	Suggested reading			157
10.1	10.1 Spontaneous supersymmetry breaking			157
10.2	10.2 The supersymmetry breaking theorem	6.1	6.1.1 The supersymmetry breaking theorem	157
10.3	10.3 Realizations of supersymmetry in quantum field theory	6.1.2	6.1.2.1 Realizations of supersymmetry in quantum field theory	158
10.4	10.4 The quantization of Yang–Mills theories	6.1.3	6.1.3.1 The quantization of Yang–Mills theories	158
10.5	10.5 The particles and fields of the Standard Model: gauge bosons and fermions	6.1.4	6.1.4.1 The particles and fields of the Standard Model: gauge bosons and fermions	160
10.6	10.6 The particles and fields of the Standard Model: Higgs scalars and the complete Standard Model	6.1.5	6.1.5.1 The particles and fields of the Standard Model: Higgs scalars and the complete Standard Model	160
10.7	10.7 The gauge boson masses	6.1.6	6.1.6.1 The gauge boson masses	162
10.8	10.8 Quark and lepton masses	6.1.7	6.1.7.1 Quark and lepton masses	162
10.9	10.9 The Higgs field and its couplings	6.1.8	6.1.8.1 The Higgs field and its couplings	162
11	Suggested reading	6.1.9	6.1.9.1 The Higgs field and its couplings	162
12	Exercises	6.1.10	6.1.10.1 The Higgs field and its couplings	162
12.1	12.1.1 Fine tuning of the Higgs mass	6.1.11	6.1.11.1 Fine tuning of the Higgs mass	170
13	<b>2 The Standard Model</b>			27
14	2.1 Yang–Mills theory	6.2	6.2.1 The Yang–Mills theory	27
15	2.2 Realizations of symmetry in quantum field theory	6.2.2	6.2.2.1 Realizations of symmetry in quantum field theory	27
16	2.3 The quantization of Yang–Mills theories	6.2.3	6.2.3.1 The quantization of Yang–Mills theories	27
17	2.4 The particles and fields of the Standard Model: gauge bosons and fermions	6.2.4	6.2.4.1 The particles and fields of the Standard Model: gauge bosons and fermions	27
18	2.5 The particles and fields of the Standard Model: Higgs scalars and the complete Standard Model	6.2.5	6.2.5.1 The particles and fields of the Standard Model: Higgs scalars and the complete Standard Model	27
19	2.6 The gauge boson masses	6.2.6	6.2.6.1 The gauge boson masses	27
20	2.7 Quark and lepton masses	6.2.7	6.2.7.1 Quark and lepton masses	27
21	2.8 The Higgs field and its couplings	6.2.8	6.2.8.1 The Higgs field and its couplings	27
22	Suggested reading	6.2.9	6.2.9.1 The Higgs field and its couplings	27
23	Exercises	6.2.10	6.2.10.1 The Higgs field and its couplings	27
24	2.1.1 Fine tuning of the Higgs mass	6.2.11	6.2.11.1 Fine tuning of the Higgs mass	27
25	<b>3 Phenomenology of the Standard Model</b>			27
26	3.1 The weak interactions	6.3	6.3.1 The weak interactions	27
27	3.2 Discovery of the Higgs	6.3.2	6.3.2.1 Discovery of the Higgs	29
28	3.3 The quark and lepton mass matrices	6.3.3	6.3.3.1 The quark and lepton mass matrices	32
29	3.4 The strong interactions	6.3.4	6.3.4.1 The strong interactions	34
30	3.5 The renormalization group	6.3.5	6.3.5.1 The renormalization group	36
31	3.6 Calculating the beta function	6.3.6	6.3.6.1 Calculating the beta function	39
32	3.7 The strong interactions and dimensional transmutation	6.3.7	6.3.7.1 The strong interactions and dimensional transmutation	43
33	3.8 Confinement and lattice gauge theory	6.3.8	6.3.8.1 Confinement and lattice gauge theory	44
34	3.9 Strong interaction processes at high momentum transfer	6.3.9	6.3.9.1 Strong interaction processes at high momentum transfer	51
35	Suggested reading	6.3.10	6.3.10.1 Strong interaction processes at high momentum transfer	51
36	Exercises	6.3.11	6.3.11.1 Strong interaction processes at high momentum transfer	52

<b>4 The Standard Model as an effective field theory</b>	63
4.1 Integrating out massive fields	63
4.2 Lepton and baryon number violation; neutrino mass	67
4.3 Challenges for the Standard Model	71
4.4 The naturalness principle	74
4.5 Summary: successes and limitations of the Standard Model	75
Suggested reading	75
<b>5 Anomalies, instantons and the strong CP problem</b>	76
5.1 The chiral anomaly	77
5.2 A two-dimensional detour	81
5.3 Real QCD	88
5.4 The strong CP problem	98
5.5 Possible solutions of the strong CP problem	100
Suggested reading	104
Exercises	104
<b>6 Grand unification</b>	106
6.1 Cancelation of anomalies	108
6.2 Renormalization of couplings	108
6.3 Breaking to $SU(3) \times SU(2) \times U(1)$	109
6.4 $SU(2) \times U(1)$ breaking	110
6.5 Charge quantization and magnetic monopoles	111
6.6 Proton decay	112
6.7 Other groups	112
Suggested reading	114
Exercises	115
<b>7 Magnetic monopoles and solitons</b>	116
7.1 Solitons in $1+1$ dimensions	117
7.2 Solitons in $2+1$ dimensions: strings or vortices	118
7.3 Magnetic monopoles	119
7.4 The BPS limit	120
7.5 Collective coordinates for the monopole solution	122
7.6 The Witten effect: the electric charge in the presence of $\theta$	123
7.7 Electric–magnetic duality	124
Suggested reading	125
Exercises	125
<b>8 Technicolor: a first attempt to explain hierarchies</b>	126
8.1 QCD in a world without Higgs fields	127
8.2 Fermion masses: extended technicolor	128
8.3 The Higgs discovery and precision electroweak measurements	130
8.4 The Higgs as a Goldstone particle	131

## Part 2 Supersymmetry

18	Suggested reading	131
18	Exercises	132
18	18.2 A history of supersymmetry	248
18	Suggested reading	133
18	Exercises	253
19	<b>9 Supersymmetry</b>	135
19	9.1 The supersymmetry algebra and its representations	136
19	9.2 Superspace	136
19	9.3 $N=1$ Lagrangians	140
19	9.4 The supersymmetry currents	142
19	9.5 The ground state energy in globally supersymmetric theories	143
19	9.6 Some simple models	144
19	9.7 Non-renormalization theorems	146
19	9.8 Local supersymmetry: supergravity	148
19	Suggested reading	149
19	Exercises	150
20	Suggested reading	153
20	<b>10 A first look at supersymmetry breaking</b>	151
20	10.1 Spontaneous supersymmetry breaking	151
20	10.2 The goldstino theorem	153
20	10.3 Loop corrections and the vacuum degeneracy	154
20	10.4 Explicit soft supersymmetry breaking	155
20	10.5 Supersymmetry breaking in supergravity models	157
20	Suggested reading	159
20	Exercises	159
21	The bosonic string	295
21	<b>11 The Minimal Supersymmetric Standard Model</b>	160
21	11.1 Soft supersymmetry breaking in the MSSM	162
21	11.2 $SU(2) \times U(1)$ breaking	166
21	11.3 Embedding the MSSM in supergravity	167
21	11.4 Radiative corrections to the Higgs mass limit	168
21	11.5 Fine tuning of the Higgs mass	170
21	11.6 Reducing the tuning: the NMSSM	170
21	11.7 Constraints on low-energy supersymmetry: direct searches and rare processes	171
21	Suggested reading	176
21	Exercises	176
22	22.1 Open superstrings	319
22	<b>12 Supersymmetric grand unification</b>	177
22	12.1 A supersymmetric grand unified model	177
22	12.2 Coupling constant unification	178
22	12.3 Dimension-five operators and proton decay	179
22	Suggested reading	181
22	Exercises	181

<b>13 Supersymmetric dynamics</b>	182
13.1 Criteria for supersymmetry breaking: the Witten index	182
13.2 Gaugino condensation in pure gauge theories	184
13.3 Supersymmetric QCD	185
13.4 $N_f < N$ : a non-perturbative superpotential	188
13.5 The superpotential in the case $N_f < N - 1$	190
13.6 $N_f = N - 1$ : the instanton-generated superpotential	191
Suggested reading	196
Exercises	196
13.7 The chiral anomaly	197
<b>14 Dynamical supersymmetry breaking</b>	198
14.1 Models of dynamical supersymmetry breaking	198
14.2 Metastable supersymmetry breaking	200
14.3 Particle physics and dynamical supersymmetry breaking	203
Suggested reading	209
Exercises	210
<b>15 Theories with more than four conserved supercharges</b>	211
15.1 $N = 2$ theories: exact moduli spaces	211
15.2 A still simpler theory: $N = 4$ Yang–Mills	213
15.3 A deeper understanding of the BPS condition	214
15.4 Seiberg–Witten theory	216
Suggested reading	221
Exercises	221
<b>16 More supersymmetric dynamics</b>	222
16.1 Conformally invariant field theories	222
16.2 More supersymmetric QCD	224
16.3 $N_f = N_c$	224
16.4 $N_f > N + 1$	228
16.5 $N_f \geq 3N/2$	229
Suggested reading	229
Exercises	230
<b>17 An introduction to general relativity</b>	231
17.1 Tensors in general relativity	232
17.2 Curvature	236
17.3 The gravitational action	237
17.4 The Schwarzschild solution	239
17.5 Features of the Schwarzschild metric	241
17.6 Coupling spinors to gravity	243
Suggested reading	244
Exercises	244
17.7 The Higgs as a Goldstone particle	245

<b>18 Cosmology</b>	245
18.1 The cosmological principle and the FRW universe	245
18.2 A history of the universe	248
Suggested reading	253
Exercises	253
27.4 Obstacles to a weakly coupled string	406
<b>19 Particle astrophysics and inflation</b>	254
19.1 Inflation	256
19.2 The axion as the dark matter	264
19.3 The LSP as the dark matter	267
19.4 The moduli problem	270
19.5 Baryogenesis	272
19.6 Flat directions and baryogenesis	280
19.7 Supersymmetry breaking in the early universe	281
19.8 The fate of the condensate	282
19.9 Dark energy	284
Suggested reading	285
Exercises	286
Exercises	430
<b>Part 3 String theory</b>	287
<b>20 Introduction</b>	289
20.1 The peculiar history of string theory	290
Suggested reading	294
Exercises	430
<b>21 The bosonic string</b>	295
21.1 The light cone gauge in string theory	297
21.2 Closed strings	300
21.3 String interactions	301
21.4 Conformal invariance	303
21.5 Vertex operators and the $S$ -matrix	309
21.6 The $S$ -matrix versus the effective action	314
21.7 Loop amplitudes	315
Suggested reading	317
Exercises	318
Exercises	430
<b>22 The superstring</b>	319
22.1 Open superstrings	319
22.2 Quantization in the Ramond sector: the appearance of space–time fermions	321
22.3 Type II theory	322
22.4 World-sheet supersymmetry	323
22.5 The spectra of the superstrings	323
22.6 Manifest space–time supersymmetry: the Green–Schwarz formalism	330
22.7 Vertex operators	332

Suggested reading	333
Exercises	333
<b>23 The heterotic string</b>	335
23.1 The $O(32)$ theory	335
23.2 The $E_8 \times E_8$ theory	336
23.3 Heterotic string interactions	337
23.4 A non-supersymmetric heterotic string theory	338
Suggested reading	339
Exercises	339
<b>24 Effective actions in ten dimensions</b>	340
24.1 Eleven-dimensional supergravity	340
24.2 The IIA and IIB supergravity theories	341
24.3 Ten-dimensional supersymmetric Yang–Mills theory	342
24.4 Coupling constants in string theory	343
Suggested reading	346
Exercise	346
<b>25 Compactification of string theory I. Tori and orbifolds</b>	347
25.1 Compactification in field theory: the Kaluza–Klein program	347
25.2 Closed strings on tori	350
25.3 Enhanced symmetries and $T$ -duality	354
25.4 Strings in background fields	355
25.5 Bosonic formulation of the heterotic string	359
25.6 Orbifolds	360
25.7 Effective actions in four dimensions for orbifold models	366
25.8 Non-supersymmetric compactifications	369
Suggested reading	370
Exercises	371
<b>26 Compactification of string theory II. Calabi–Yau compactifications</b>	372
26.1 Mathematical preliminaries	372
26.2 Calabi–Yau spaces: constructions	376
26.3 The spectrum of Calabi–Yau compactifications	379
26.4 World-sheet description of Calabi–Yau compactification	381
26.5 An example: the quintic in $CP^4$	383
26.6 Calabi–Yau compactification of the heterotic string at weak coupling	385
Suggested reading	395
Exercises	395

<b>27 Dynamics of string theory at weak coupling</b>	397
27.1 Non-renormalization theorems	398
27.2 Fayet–Iliopoulos $D$ terms	401
27.3 Gaugino condensation: breakdown of axion shift symmetries beyond perturbation theory	405
27.4 Obstacles to a weakly coupled string phenomenology	406
Suggested reading	407
<b>28 Beyond weak coupling: non-perturbative string theory</b>	408
28.1 Perturbative dualities	409
28.2 Strings at strong coupling: duality	409
28.3 $D$ -branes	410
28.4 Branes from the $T$ -duality of Type I strings	413
28.5 Strong–weak coupling dualities: equivalence of different string theories	417
28.6 Strong–weak coupling dualities: some evidence	418
28.7 Strongly coupled heterotic string	423
28.8 Non-perturbative formulations of string theory	425
Suggested reading	429
Exercises	430
<b>29 Large and warped extra dimensions</b>	431
29.1 Large extra dimensions: the ADD proposal	431
29.2 Warped spaces: the Randall–Sundrum proposal	434
Suggested reading	436
Exercise	436
<b>30 The landscape: a challenge to the naturalness principle</b>	437
30.1 The cosmological constant revisited	437
30.2 Candidates for an underlying landscape	439
30.3 The nature of physical law in a landscape	439
30.4 Physics beyond the Standard Model in a landscape	440
30.5 't Hooft's naturalness principle challenged	442
30.6 Small and medium size hierarchies: split supersymmetry	442
Suggested reading	443
<b>31 Coda: Where are we heading?</b>	444
31.1 The hierarchy or naturalness problem	444
31.2 Dark matter, the baryon asymmetry and dark energy	445
31.3 Inflationary cosmology	446
31.4 String theory and other approaches to foundational questions	446
Suggested reading	447

The second part of the book focuses on supersymmetry. In addition to global supersymmetry in superspace, there is a study of the supersymmetry currents, which are important for understanding dynamics and also for understanding the BPS conditions which play an

	Suggested reading	<b>Part 4 Appendices</b>	449
	Exercises		
	<b>Appendix A Two-component spinors</b>		451
	<b>Appendix B Goldstone's theorem and the pi mesons</b>		454
	Exercises		456
	<b>Appendix C Some practice with the path integral in field theory</b>		457
	C.1 Path integral review		457
	C.2 Finite-temperature field theory		458
	C.3 QCD at high temperatures		462
	C.4 Weak interactions at high temperatures		463
	C.5 Electroweak baryon number violation		464
	Suggested reading		466
	Exercises		466
	<b>Appendix D The beta function in supersymmetric Yang–Mills theory</b>		467
	Suggested reading		468
	Exercise		469
	<b>25 Compactification of string theory I: tori and orbifolds</b>		347
	<i>References</i>		470
	<i>Index</i>		477
	25.1 Closed strings		347
	25.2 Enhanced tori		354
	25.3 Strings in background fields		355
	25.4 Bosonic formulation of the heterotic string		359
	25.5 Orbifolds		360
	25.6 Effective action		366
	25.7 Non-supersymmetric compactifications		369
	Suggested reading		370
	Exercises		371
	<b>26 Compactification of string theory II: Calabi–Yau spaces</b>		372
	26.1 Mathematics of Calabi–Yau spaces		372
	26.2 Calabi–Yau spaces: constructions		376
	26.3 The spectrum of Calabi–Yau compactifications		379
	26.4 World-sheet description of Calabi–Yau		381
	26.5 An example: the quintic		383
	26.6 Calabi–Yau and brane		385
	Suggested reading		395
