| <b>1 Introduction</b>                           | 1         |
| 1.1 The Standard Model of particle physics      | 1         |
| 1.2 Interactions of particles with matter       | 13        |
| 1.3 Collider experiments                        | 22        |
| 1.4 Measurements at particle accelerators       | 25        |
| Summary                                         | 27        |
| Problems                                        | 28        |
| <b>2 Underlying concepts</b>                    | 30        |
| 2.1 Units in particle physics                   | 30        |
| 2.2 Special relativity                          | 33        |
| 2.3 Non-relativistic quantum mechanics          | 40        |
| Summary                                         | 54        |
| Problems                                        | 55        |
| <b>3 Decay rates and cross sections</b>         | 58        |
| 3.1 Fermi's golden rule                         | 58        |
| 3.2 Phase space and wavefunction normalisation  | 59        |
| 3.3 Particle decays                             | 66        |
| 3.4 Interaction cross sections                  | 69        |
| 3.5 Differential cross sections                 | 72        |
| Summary                                         | 77        |
| Problems                                        | 78        |
| <b>4 The Dirac equation</b>                     | 80        |
| 4.1 The Klein–Gordon equation                   | 80        |
| 4.2 The Dirac equation                          | 82        |
| 4.3 Probability density and probability current | 85        |
| 4.4 *Spin and the Dirac equation                | 86        |
| 4.5 Covariant form of the Dirac equation        | 89        |

|          |                                                 |            |
|----------|-------------------------------------------------|------------|
| 4.6      | Solutions to the Dirac equation                 | 92         |
| 4.7      | Antiparticles                                   | 96         |
| 4.8      | Spin and helicity states                        | 104        |
| 4.9      | Intrinsic parity of Dirac fermions              | 108        |
|          | Summary                                         | 111        |
|          | Problems                                        | 112        |
| <b>5</b> | <b>Interaction by particle exchange</b>         | <b>114</b> |
