

120 3.2. Empirical Consequences of the Relativity of Inertia Principle

126 3.3. Expansion and Angular Momentum of Large Cosmic Masses

139 3.4. Inertia-Free Dynamics and Hamilton's Equations of Motion

149 Appendix A. Formalism of Four-Dimensional Spaces

149 A.1. Differentiable Manifolds

151 A.2. Metric Space

152 A.3. Covariance and Covariance

156 A.4. The Affine Connection

157 A.5. Integrability, Torsion, and Curvature

A.6. Transition from Covariance to Contravariance

Introduction 13

Chapter 1. Local Principles and the Theory of Gravitation 21

1.1. Preliminary Ideas 21

1.2. Linear Form of the Theory of Gravitation 31

1.3. Nonlinear Form of the Theory of Gravitation: Statement of the Problem and First Steps 55

1.4. Theoretical Principles and Nonlinear Theory of Gravitation 63

Chapter 2. Intermezzo: The Einstein Effects 75

2.1. Significance of the Post-Newtonian Kepler Problem 75

2.2. The Significance of Gravitational Optics 101

Chapter 3. Global Principles and the Theory of Gravitation 109

3.1. Principles of a Global (Inertia-Free) Theory of Gravitation 109

Contents

3.2. Empirical Consequences of the Relativity of Inertia Principle	120
3.3. Expansion and Angular Momentum of Large Cosmic Masses	126
3.4. Inertia-Free Dynamics and Hamilton's Equations of Motion	139
Appendix A. Formalism of Four-Dimensional Spaces	149
A.1. Differentiable Manifolds	149
A.2. Metric Space	151
A.3. Contravariance and Covariance	153
A.4. The Affine Connection	156
A.5. Integrability, Torsion, and Curvature	157
A.6. Transition from Covariance to Contravariance, and Conversely, in Metric Space	161
A.7. Relation between the Affine and Metric Connections in R^4	163
A.8. Absolute Differential and Covariant Differentiation	164
A.9. Parallel Displacement or Transport	167
A.10. Symmetry and Other Properties of Torsion and Various Curvatures	168
A.11. Classification of Metric Types	170
A.11.1. Classification from the Integrability Point of View	170
A.11.2. Classification from the Affine Connection	171
Appendix B. General Relativity Principle and General Lorentz Covariance	181
B.1. Lorentz-Covariant Derivatives	181
B.2. Spinor Calculus	192
