Preface	ix
Notation, Conventions, and Terminology	xii
1 Introduction and Overview	1
1.1 The Formulation of Quantum Field Theory in Curved Spacetime	1
1.2 Classical Black Hole Thermodynamics	6
1.3 The Hawking Effect and Its Ramifications	8
2 Quantum Mechanical Preliminaries	10
2.1 Classical Dynamics of Particle Systems	10
2.2 Quantum Mechanics	17
2.3 Harmonic Oscillators	21
3 Quantum Fields in Flat Spacetime	31
3.1 Basic Construction	31
3.2 Reformulation	35
3.3 Particle Interpretation	46
4 Quantum Fields in Curved Spacetime	53
4.1 Curved Spacetimes; Global Hyperbolicity	54
4.2 Construction of Quantum Field Theory in a Curved Spacetime	57
4.3 Quantum Field Theory in Stationary Spacetimes	61
4.4 Unitary Equivalence; the S-Matrix	66
4.5 The Algebraic Approach	73
4.6 The Stress-Energy Tensor	85
4.7 Other Linear Fields	100
5 The Unruh Effect	105
5.1 The Unruh Effect in Flat Spacetime	106
5.2 Killing Horizons	118
5.3 The Unruh Effect in Curved Spacetimes	123

<b>6</b>	<b>Classical Black Hole Thermodynamics</b>	<b>133</b>
6.1	Classical Black Holes and the Area Theorem	133
6.2	The Laws of Black Hole Mechanics	139
<b>7</b>	<b>The Hawking Effect</b>	<b>151</b>
7.1	Particle Creation by Black Holes	152
7.2	The Generalized Second Law	163
7.3	Evaporation of Black Holes and Loss of Quantum Coherence	175
<b>Appendix: Some Basic Definitions and Constructions Pertaining to Hilbert Spaces 188</b>		
A.1	Some Basic Definitions	188
A.2	Some Basic Constructions	190
A.3	Index Notation	192
	References	195
	Notation Index	201
	General Index	203
