|--|-----------|
| <b>Introduction</b>  | <b>4</b>  |
| <b>1. State of the art</b>   | <b>5</b>  |
| 1.1. Phase change hysteresis . . . . .   | 5         |
| 1.1.1. Phase change hysteresis in complete phase change cycles . . . . .       | 5         |
| 1.1.2. Phase change hysteresis in partial phase changes . . . . .              | 8         |
| 1.1.3. Curve-track model . . . . .   | 8         |
| 1.1.4. Curve-switch model . . . . .  | 8         |
| 1.1.5. Isothermal and isoenthalpic toggling models . . . . .                   | 9         |
| 1.1.6. Curve-scale model . . . . .   | 10        |
| <b>2. Analysis and conclusions of literature review</b>                        | <b>14</b> |
| 2.1. Approches to the numerical modelling of phase change hysteresis phenomena | 14        |
| 2.1.1. One-curve model . . . . .   | 14        |
| 2.1.2. Two-curve model . . . . .   | 14        |
| 2.1.3. Partial phase change . . . . .  | 15        |
| 2.1.4. Inverse problem . . . . .   | 15        |
| 2.2. Scope of work in relation to the current state of knowledge . . . . .     | 16        |
| <b>3. Aims of the study</b>  | <b>17</b> |
| 3.1. Scientific questions and hypotheses . . . . .                             | 17        |
| 3.2. Thesis layout . . . . .   | 18        |
| <b>4. Summary of conducted work</b>  | <b>20</b> |
| 4.1. Paper [I.] (Research goals (A) and (C)) . . . . .                         | 20        |
| 4.2. Paper [II.] (Research goals (B) and (C)) . . . . .                        | 21        |
| 4.3. Paper [III.] (Research goals (A), (B), and (C)) . . . . .                 | 23        |
| 4.4. Paper [IV.] (Research goal (C)) . . . . .                                 | 25        |
| 4.5. Paper [V.] (Research goal (C)) . . . . .                                  | 26        |
| <b>Conclusions</b>   | <b>28</b> |
| 4.6. Future research . . . . .   | 29        |
| 4.7. Limitations . . . . .   | 29        |
| <b>References</b>  | <b>30</b> |
