

# Contents

|   |    |
|---|----|
| <b>Chapter 1</b>  |    |
| <b>Moles and Molarity</b>   | 1  |
| Aims and Objectives   | 1  |
| States of Matter  | 1  |
| Elements, Atoms and Molecules   | 1  |
| Elements, Mixtures and Compounds (Molecules)  | 2  |
| Simple Chemical Names   | 3  |
| Cations and Anions  | 3  |
| Types of Chemical Formula   | 4  |
| Atomic Weight   | 4  |
| Avogadro's Number   | 5  |
| Empirical Formula   | 5  |
| Chemical Equations  | 6  |
| Balancing Chemical Equations  | 7  |
| Molar Solutions   | 8  |
| Volumetric Reactions  | 9  |
| Volumetric Titrations   | 10 |
| Limiting Reactions  | 11 |
| Worked Example No. 1  | 11 |
| Worked Example No. 2  | 13 |
| <b>Chapter 2</b>  |    |
| <b>The Structure of the Atom, Electron Configuration and the Build-up to the Periodic Table</b> | 14 |
| Aims and Objectives   | 14 |
| The Structure of the Atom   | 14 |
| Bohr Model of the Atom  | 17 |
| The Build-up Process for the Periodic Table   | 27 |

|  |    |
|--|----|
| <b>Chapter 3</b>   |    |
| <b>The Physical Properties of the Elements and the Periodic Table</b>  | 31 |
| Aims and Objectives  | 31 |
| The Periodic Table   | 31 |
| Variation in the Atomic Radii  | 34 |
| Variation in the Ionisation Potentials   | 34 |
| Variation in the Electron Affinities or Attachment Enthalpies  | 37 |
| Summary  | 38 |
| <br>   |    |
| <b>Chapter 4</b>   |    |
| <b>Chemical Properties of the Elements and the Periodic Table</b>  | 39 |
| Aims and Objectives  | 39 |
| Introduction   | 39 |
| Characteristic or Group Oxidation Numbers  | 41 |
| Oxidation Numbers  | 43 |
| Rules for the Determination of Oxidation Numbers   | 44 |
| Main Group Variable Valence  | 44 |
| Transition Metal Variable Valence  | 46 |
| Chemical Stoichiometry   | 49 |
| The Calculation of Chemical Stoichiometry Factors –  |    |
| Worked Examples  | 51 |
| Redox Reactions  | 52 |
| Covalent Bonds   | 53 |
| Polyatomic Covalent Molecules  | 54 |
| Molecular Orbital Theory of Diatomic Molecules   | 56 |
| Bond Order   | 60 |
| <br>   |    |
| <b>Chapter 5</b>   |    |
| <b>The Lewis Structures of Molecules, Cations and Anions, Including Oxyanions</b>  | 61 |
| Aims and Objectives  | 61 |
| Introduction   | 61 |
| The Working Method for Drawing Lewis Structures  | 64 |
| Example 1: Methane (CH <sub>4</sub> ) and Carbon Tetrachloride (CCl <sub>4</sub> )   | 65 |
| Example 2: The Ammonium Cation (NH <sub>4</sub> <sup>+</sup> ) and the Tetrafluoroborate Anion (BF <sub>4</sub> <sup>-</sup> ) | 66 |
| Example 3: Ammonia (NH <sub>3</sub> ) and Water (OH <sub>2</sub> )   | 68 |

|  |    |
|--|----|
| Example 4: Beryllium Dihydride ( $\text{BeH}_2$ ) and Boron Trifluoride ( $\text{BF}_3$ )          | 69 |
| Example 5: Phosphorus Pentchloride ( $\text{PCl}_5$ ) and Sulfur Hexafluoride ( $\text{SF}_6$ )    | 70 |
| Example 6: 1,1,-Dichloromethanone ( $\text{Cl}_2\text{CO}$ ) and Ethene ( $\text{C}_2\text{H}_4$ ) | 71 |
| Example 7: Ethyne ( $\text{C}_2\text{H}_2$ )   | 73 |
| The Oxyacids and Oxyanions of the Main Group Elements  | 74 |
| The Position of the Hydrogen Atoms in the Oxyacids   | 74 |
| The Free Valence of the Terminal Oxygen Atoms  | 76 |
| Resonance in the Structures of the Oxyanions   | 78 |
| The Application of the Working Method to the Lewis Structures of the Oxyanions                     | 79 |
| Example 1: Carbonic Acid, $\text{H}_2\text{CO}_3$  | 79 |
| Example 2: Sulfuric Acid, $\text{H}_2\text{SO}_4$  | 81 |
| The Use of Formal Charges  | 84 |
| Summary  | 86 |

## Chapter 6

### Shape and Hybridisation

|   |     |
|---|-----|
| Aims and Objectives                       | 88  |
| The Shapes of Covalent Molecules          | 88  |
| The Working Method for Using VSEPR Theory | 92  |
| Deviations from Regular Shapes            | 94  |
| The Advantages of VSEPR Theory            | 95  |
| The Disadvantages of VSEPR Theory         | 95  |
| The Shape of Dinuclear Molecules          | 95  |
| Hybridisation of Atomic Orbitals          | 99  |
| Hybridisation in Polynuclear Molecules    | 104 |
| Summary                                   | 106 |

## Chapter 7

### A Features of Interest Approach to Systematic Inorganic Chemistry

|   |     |
|---|-----|
| Aims and Objectives                                   | 107 |
| Introduction  | 107 |
| The Preparation of Simple Compounds from the Elements | 109 |
| The Reactions of Simple Compounds                     | 113 |
| Reaction with Water                                   | 113 |
| Volumetric Reactions                                  | 114 |
| The Effect of Heat                                    | 115 |

|  |            |
|--|------------|
| Features of Interest of Simple Compounds – Working Method  | 116        |
| The Application of the Working Method to a Selection of Simple Compounds                         |            |
| Example 1: Methane, (CH <sub>4</sub> )   | 119        |
| Example 2: Hydrochloric Acid (HCl)   | 120        |
| Example 3: Sodium Chloride (NaCl)  | 121        |
| Example 4: Phosphorus Pentachloride (PCl <sub>5</sub> )  | 122        |
| Example 5: Copper (II) Oxide, (CuO)  | 123        |
| Example 6: Iron (II) Chloride (FeCl <sub>2</sub> )   | 124        |
| Example 7: Iron (II) Sulfate Hexahydrate ([Fe(OH <sub>2</sub> ) <sub>6</sub> ][SO <sub>4</sub> ) | 125        |
| Example 8: Carbonic Acid (H <sub>2</sub> CO <sub>3</sub> )                                       | 126        |
| Writing an Essay or Report from a Spider Diagram   | 128        |
| Conclusions  | 130        |
| Suggested Ways Forward   | 130        |
| Phase II – Features of Interest  | 130        |
| Phase III – Features of Interest   | 131        |
| The Advantages of the Features of Interest Approach  | 139        |
| The Disadvantages of the Features of Interest Approach   | 139        |
| <b>Appendices</b>  | <b>144</b> |
| <b>Periodic Table of the Elements</b>  | <b>148</b> |
| <b>Subject Index</b>   | <b>149</b> |
