

# Contents

<b>I</b>	<b>Introduction</b>	<b>1</b>
<b>1</b>	<b>Review of Basic Concepts</b>	<b>3</b>
1.1	Vector Analysis . . . . .	3
1.1.1	$\mathbf{R}^2$ and $\mathbf{R}^3$ as Vector Spaces . . . . .	7
1.2	Linear Transformations . . . . .	12
1.3	Review of Matrix Properties . . . . .	14
1.4	Barycentric Coordinates . . . . .	18
1.5	Functions . . . . .	22
1.5.1	Equations of Lines . . . . .	24
1.5.2	Equations of Planes . . . . .	26
1.5.3	Polynomials . . . . .	29
1.5.4	Rational Functions . . . . .	32
1.6	Parametric or Vector Functions . . . . .	34
1.6.1	Function Characteristics . . . . .	37
<b>II</b>	<b>Curves</b>	<b>43</b>
<b>2</b>	<b>Representation Issues</b>	<b>45</b>
2.1	The <i>Other</i> Representation—Data Set Representation . . . . .	46
2.2	Explicit Formulations . . . . .	47
2.3	Implicit Representation . . . . .	51
2.3.1	Differentiating Implicit Functions . . . . .	53
2.3.2	Graphing Implicit Functions . . . . .	54
		xv

2.4	Parametric Representation . . . . .	57
2.5	Shape Approximation . . . . .	67
<b>3</b>	<b>Conic Sections</b>	<b>73</b>
3.1	The Use of Conic Sections in Design . . . . .	73
3.2	Locus of Points Definitions . . . . .	74
3.2.1	The Circle . . . . .	74
3.2.2	The Ellipse . . . . .	74
3.2.3	The Hyperbola . . . . .	76
3.2.4	The Parabola . . . . .	78
3.3	Conic Sections . . . . .	78
3.4	Implicit Quadratic Functions as Conics . . . . .	82
3.5	5 Point Construction . . . . .	88
3.6	Using Tangents . . . . .	91
3.6.1	Blending Formulation Revisited . . . . .	93
3.7	Conic Arcs as Rational Functions . . . . .	95
3.8	Piecewise Conic Sections . . . . .	106
3.9	Using Homogeneous Coordinates to Represent Conics . . . . .	107
3.9.1	Extending the Constructive Algorithm to All Conics . . . . .	107
3.9.2	The Homogeneous Coordinate System and the Projective Plane . . . . .	109
<b>4</b>	<b>Differential Geometry for Space Curves</b>	<b>113</b>
4.1	More on Parameterizations . . . . .	113
4.2	Arc Length Parameterization . . . . .	115
4.3	Intrinsic Vectors of a Space Curve . . . . .	118
4.4	Frenet Equations . . . . .	121
4.5	Frenet Equations for Non-Arc Length Parameterizations . . . . .	127
4.6	Intrinsic Functions on Arbitrary Parameterizations . . . . .	127
4.7	Piecing together Parametric Curves . . . . .	131
4.8	Exercises . . . . .	134
<b>5</b>	<b>Bézier Curves and Bernstein Approximation</b>	<b>137</b>
5.1	Constructive Evaluation Curves . . . . .	138
5.1.1	Derivatives of Constructive Evaluation Curves . . . . .	140
5.2	Bézier Curves . . . . .	142
5.2.1	Properties of Bernstein Blending Functions . . . . .	147
5.2.2	Curve Properties . . . . .	150
5.2.3	Derivative Evaluation . . . . .	151
5.2.4	Midpoint Subdivision . . . . .	154
5.3	Bernstein Approximation . . . . .	155

5.4	Interpolation Using the Bernstein Blending Functions . . .	160
5.4.1	Comparing Bézier Curves and Interpolation . . . . .	161
5.4.2	Comparing Bernstein Approximation to Functions and Interpolation . . . . .	162
5.5	Piecing together Bézier Curves . . . . .	164
5.6	Adding Flexibility—Degree Raising . . . . .	166
<b>6</b>	<b>B-Spline Curves</b> . . . . .	<b>171</b>
6.1	Constructive Piecewise Curves . . . . .	172
6.2	B-Spline Blending Functions . . . . .	183
6.2.1	Proof of Equivalence of Constructive Algorithm with Curve Form . . . . .	187
6.3	More Properties of B-Splines . . . . .	189
6.3.1	Continuity at the Curve Ends . . . . .	199
<b>7</b>	<b>Linear Spaces of B-Splines</b> . . . . .	<b>205</b>
7.1	Uniform Floating Spline Curves . . . . .	208
7.2	Spline Space Hierarchy . . . . .	209
7.2.1	Uniform Subdivision Curves . . . . .	213
7.3	Linear Independence of B-Splines . . . . .	218
7.4	A Second Look . . . . .	224
<b>8</b>	<b>Choosing a B-Spline Space</b> . . . . .	<b>231</b>
8.1	Knot Patterns . . . . .	231
8.1.1	Uniform vs. Nonuniform Knot Vectors . . . . .	235
8.1.2	End Conditions for B-Spline Curves . . . . .	236
8.1.3	Computing Uniform Floating B-Splines . . . . .	242
8.2	Analysis of Lower Degree Curves . . . . .	246
8.2.1	Quadratic B-Spline Curves . . . . .	247
8.2.2	Cubic B-Spline Curves . . . . .	250
8.3	Rational B-Spline Curves . . . . .	250
8.4	Effects of Multiple Knots vs. Multiple Vertices . . . . .	253
<b>9</b>	<b>Data Fitting with B-Splines</b> . . . . .	<b>259</b>
9.1	Interpolation with B-Splines . . . . .	259
9.1.1	$C^2$ Cubic Interpolation at Knots . . . . .	260
9.1.2	Higher-Order Complete Interpolation with B-Splines . . . . .	264
9.2	Other Positional Interpolation with B-Splines . . . . .	266
9.2.1	Nodal Interpolation . . . . .	267
9.2.2	Piecewise Cubic Hermite Interpolation . . . . .	268
9.2.3	Generalized Interpolation . . . . .	270

9.3	B-Spline Least Squares . . . . .	270
9.3.1	Direct Manipulation . . . . .	273
9.4	Schoenberg Variation Diminishing Splines . . . . .	274
9.5	Quasi-Interpolation . . . . .	279
9.5.1	Variation Diminishing Splines and B-Spline Curves . . . . .	283
9.6	Multiresolution Decomposition . . . . .	284
9.6.1	Multiresolution Curve Editing . . . . .	286
9.6.2	Constraints and Multiresolution Curve Editing . . . . .	288
<b>10</b>	<b>Other Polynomial Bases for Interpolation</b>	<b>291</b>
10.1	Position Interpolation . . . . .	292
10.1.1	Hermite Interpolation . . . . .	295
10.2	Generalized Hermite Interpolation . . . . .	302
10.3	Piecewise Methods . . . . .	306
10.3.1	Piecewise Hermite Interpolation . . . . .	308
10.4	Parametric Extensions . . . . .	312
<b>11</b>	<b>Other Derivations of B-Splines</b>	<b>317</b>
11.1	Higher-Dimensional Volumetric Projections . . . . .	317
11.2	Divided Difference Formulation . . . . .	322
11.2.1	Divided Differences . . . . .	322
11.2.2	Divided Differences for B-Splines . . . . .	328
11.3	Fast Evaluation of Polynomials Using Divided Differences . . . . .	332
11.3.1	Fast Calculations with Bézier Curves . . . . .	334
11.3.2	Fast Evaluation of B-Spline Curves . . . . .	334
11.4	Inverse Fourier Transform Definition of Splines . . . . .	335
<b>III</b>	<b>Surfaces</b>	<b>339</b>
<b>12</b>	<b>Differential Geometry for Surfaces</b>	<b>341</b>
12.1	Regular Surfaces . . . . .	341
12.2	Tangents to Surfaces . . . . .	348
12.3	First Fundamental Form . . . . .	351
12.3.1	Arc Length of a Curve on a Simple Surface . . . . .	351
12.3.2	Invariance of the First Fundamental Form . . . . .	354
12.3.3	Angles between Tangent Vectors . . . . .	355
12.3.4	Surface Area of a Simple Surface . . . . .	356
12.4	The Second Fundamental Form and Curves in the Surface . . . . .	358
12.4.1	Examples . . . . .	368
12.4.2	The Osculating Paraboloid . . . . .	372
12.5	Surfaces . . . . .	377

<b>13 Surface Representations</b>	<b>381</b>
13.1 Surface Representations . . . . .	381
13.2 Tensor Product Surfaces . . . . .	382
13.3 Evaluating Surfaces and Partial Derivatives and Rendering Isocurves . . . . .	390
13.3.1 Bézier Surface Evaluation . . . . .	393
13.3.2 Evaluation of Tensor Product B-Spline Surfaces . . . . .	396
13.4 Uniform Refinement for Uniform Floating Spline Surfaces . . . . .	399
13.4.1 Uniform Biquadratic Subdivision . . . . .	399
13.4.2 Uniform Bicubic Subdivision . . . . .	402
13.5 Matrix Expansions . . . . .	404
13.5.1 B-Splines and Bézier . . . . .	404
13.5.2 Bézier to Power Basis Evaluation Using Matrices . . . . .	405
13.5.3 Bicubic Hermite Surface Patches . . . . .	406
13.5.4 Comparing Coefficients in Bicubic Representations . . . . .	407
13.6 Other Polynomial-Based Surface Representations . . . . .	409
13.6.1 Simplex Splines . . . . .	409
13.6.2 Box Splines . . . . .	411
13.6.3 Bézier Triangles . . . . .	411
<b>14 Fitting Surfaces</b>	<b>415</b>
14.1 Interpolating Tensor Product Surfaces . . . . .	415
14.2 Interpolation to a Grid of Data . . . . .	416
14.2.1 Nodal Interpolation . . . . .	417
14.2.2 Complete Cubic Spline Interpolation . . . . .	418
14.3 Surface Approximation . . . . .	422
14.3.1 Schoenberg Variation Diminishing Approximation . . . . .	422
14.3.2 Least Squares Surface Data Fitting . . . . .	422
14.4 Interpolating Arbitrary Boundary Curves: A Linear Operator Approach . . . . .	424
14.4.1 Coons Patches . . . . .	428
14.4.2 Using the Tensor Product Patch . . . . .	432
<b>15 Modeling with B-Spline Surfaces</b>	<b>435</b>
15.1 Generalized Cylinder and Extrusion . . . . .	435
15.2 Ruled Surfaces . . . . .	437
15.3 Surface of Revolution . . . . .	438
15.3.1 The Cylinder . . . . .	439
15.3.2 The Cone . . . . .	440
15.3.3 The Truncated Cone . . . . .	440

15.4	Sweep Surfaces . . . . .	440
15.5	Normals and Offset Surfaces . . . . .	442
15.5.1	Given Four Sides . . . . .	443
15.5.2	Floating Surface . . . . .	445
15.6	Piecing together the Surfaces . . . . .	450
<b>IV</b>	<b>Advanced Techniques</b>	<b>457</b>
<b>16</b>	<b>Subdivision and Refinement for Splines</b>	<b>459</b>
16.1	Refinement Theorems and Algorithms . . . . .	468
16.1.1	Special Case Algorithm . . . . .	475
16.1.2	Subdivision of Bézier Curves . . . . .	476
16.1.3	A More Efficient Algorithm . . . . .	480
16.2	Convergence of Refinement Strategies . . . . .	484
16.3	Degree Raising for Splines . . . . .	489
16.4	Restricted Proof for Bézier Subdivision . . . . .	492
<b>17</b>	<b>Subdivision and Refinement in Modeling</b>	<b>497</b>
17.1	Subdivision of B-Spline Curves . . . . .	498
17.1.1	General Algorithm . . . . .	498
17.2	Curve Generation with Geometric Subdivision . . . . .	501
17.3	Curve-Curve Intersection . . . . .	503
17.4	Surface Refinement and Subdivision . . . . .	505
17.4.1	A Matrix Approach . . . . .	505
17.5	Rendering Open Surfaces . . . . .	511
17.5.1	Raster Images . . . . .	511
17.5.2	Line Drawings . . . . .	513
17.6	Using Subdivision and Refinement to Implement Design Operations . . . . .	514
17.6.1	Adding Local Degrees of Freedom . . . . .	514
<b>18</b>	<b>Set Operations to Effect Modeling</b>	<b>517</b>
18.1	Intersections as Root Finding . . . . .	519
18.2	Lines . . . . .	520
18.3	Curve-Curve Intersections by Bisection . . . . .	520
18.4	Intersections with Newton-Raphson . . . . .	522
18.4.1	Curves . . . . .	522
18.4.2	Surfaces . . . . .	526
18.5	Intersections of Parametric Curves and Surfaces . . . . .	528
18.5.1	Parametric Curves . . . . .	528
18.5.2	Spline Intersections: Divide and Conquer . . . . .	528

18.5.3	Curve-Surface Intersections . . . . .	529
18.5.4	Ray-Surface Intersections . . . . .	531
18.5.5	Surface-Surface Intersection . . . . .	532
18.6	Boolean Operations on Models . . . . .	536
18.6.1	Boolean Operators by Membership Operators . . . . .	536
18.6.2	Evaluating Set Membership Functions . . . . .	539
18.6.3	Boolean Operators by Boundary Classification . . . . .	540
18.6.4	Computational Considerations in 2D Classification . . . . .	546
18.6.5	3D Classification . . . . .	552
18.7	Booleans on Sculptured Objects . . . . .	554
<b>19</b>	<b>Model Data Structures</b>	<b>557</b>
19.1	The Winged-Edge Data Structure . . . . .	558
19.2	Trimmed Surfaces . . . . .	561
19.3	A Model . . . . .	563
19.4	Non-Manifold Geometry . . . . .	566
<b>20</b>	<b>Subdivision Surfaces</b>	<b>569</b>
20.1	Catmull-Clark Subdivision Surfaces . . . . .	570
20.1.1	Subdivision Curves . . . . .	570
20.1.2	Regular Quad Mesh Surface Subdivision . . . . .	572
20.1.3	Arbitrary Grid Surface Subdivision . . . . .	574
20.1.4	Boundaries, Creases, and Darts . . . . .	577
20.1.5	Convergence . . . . .	581
20.2	Doo-Sabin Subdivision Surfaces . . . . .	582
20.2.1	Curves . . . . .	582
20.2.2	Regular Quad Mesh Surface Subdivision . . . . .	583
20.2.3	Arbitrary Grid Surface Subdivision . . . . .	584
20.2.4	Boundaries . . . . .	586
20.2.5	Convergence . . . . .	587
20.3	Triangular Subdivision Surfaces . . . . .	587
20.4	Other Types of Subdivision Surfaces . . . . .	589
<b>21</b>	<b>Higher-Dimensional Tensor Product B-Splines</b>	<b>591</b>
21.1	Evaluation and Rendering of Trivariates . . . . .	592
21.2	Advanced Operations on Trivariates . . . . .	594
21.3	Constant Sets of Trivariates . . . . .	596
21.4	Construction of Trivariates . . . . .	597
21.4.1	Interpolation and Least Squares Fitting . . . . .	599
21.4.2	Traditional Constructors . . . . .	601
21.5	Warping Using Trivariates . . . . .	603
21.6	Varying Time . . . . .	604

<b>Bibliography</b>	<b>607</b>
<b>Index</b>	<b>613</b>
18.5.3 Curve-Surface Intersections	614
18.5.4 Ray-Surface Intersections	614
18.5.5 Surface-Surface Intersections	614
18.6 Boolean Operations on Models	614
18.6.1 Boolean Operators by Membership Operations	614
