<i>Preface</i>		page	xiii
<i>Acknowledgements</i>			xvi
<b>Part I Getting Started</b>			
<b>1</b>	<b>Notation</b>		3
<b>Part II Symmetries and Quantum Field Theory</b>			
<b>2</b>	<b>Poincaré Invariance</b>		9
	2.1	What Is a Group?	9
	2.2	The Lie Algebra of the Poincaré Group	12
	2.3	Exercises	18
<b>3</b>	<b>Spin</b>		20
	3.1	Massive Particles	20
	3.2	Massless Particles	25
<b>4</b>	<b>Completeness and Normalization</b>		30
	4.1	Single-Particle States	30
	4.2	Definition of Cross-Section and Lifetime	31
	4.3	Decay Rates	36
<b>5</b>	<b>Quantum Mechanics</b>		38
	5.1	Scattering Probability	38
	5.2	$S$ Matrix	39
	5.3	Treatment of Unstable Particles	43
	5.4	Exercises	47
<b>6</b>	<b>Unitarity and Partial Waves</b>		49
	6.1	Unitary $S$ Matrix	49
	6.2	Spin $ab \rightarrow cd_M$ with $d_M \rightarrow 1, \dots, n$	56
	6.3	Application of the Formalism on Lorentz Transformations	57

<b>7</b>	<b>Introduction to Field Theory</b>	64
7.1	Multi-Particle States: Fock Space	64
7.2	What about Lorentz Transformations?	69
7.3	Let's Complete the Analogy of a Scalar Field with the Quantum-Harmonic Oscillator	71
7.4	Some Useful Identities	75
7.5	Exercises	78
<b>8</b>	<b>Complex Scalar Field</b>	80
8.1	Complex Scalar	80
8.2	Discrete Symmetries of the Charged Scalar Field	84
8.3	Exercises	88
<b>9</b>	<b>Spin-1/2 Particles</b>	89
9.1	Dirac Equation	89
9.2	Causality for Fermions	94
9.3	Phase Factor Conventions for Spinors	94
9.4	Lorentz Transformations of Fermions	98
9.5	Exercises	101
<b>10</b>	<b>Weyl Spinors</b>	103
10.1	Phase Symmetries of the Dirac Lagrangian	103
10.2	The Massless Limit of the Dirac Theory, $m = 0$	105
10.3	Lorentz Transformations and Weyl Spinors	108
<b>11</b>	<b>Spin-1 Particles</b>	111
11.1	Massive Spin-1 Particles	111
11.2	Massless Spin-1 Particles	115
<b>12</b>	<b>The <math>S</math> Matrix in Field Theory</b>	120
	<b>Part III Quantum Electrodynamics</b>	129
<b>13</b>	<b>Quantum Electrodynamics</b>	131
13.1	Introduction to QED	131
13.2	Feynman Rules in Coordinate Space	132
13.3	Feynman Rules in Momentum Space	134
	13.3.1 Bubbles and Disconnected Diagrams at Second Order in Perturbation Theory	136
13.4	Bhabha Scattering	137
13.5	Crossing Symmetry	138
13.6	Exercises	142

<b>14</b>	<b>Magnetic Moments in QED</b>	143
14.1	The Dirac Magnetic Moment	143
14.2	Anomalous Magnetic Moments	145
14.3	Measurement of $a_e$	147
14.4	Anomalous Magnetic Moment of the Muon	148
14.5	How Is $a_\mu$ Measured?	150
14.6	Strong-Interaction Contribution to Electromagnetic Processes	151
14.7	Lamb Shift	153
<b>15</b>	<b>The Size of the Proton</b>	155
15.1	Elastic Electron-Proton Scattering	155
15.2	Physical Interpretation of the Form Factor	160
15.3	Form Factors in the Crossed Channel	163
15.4	Exercises	166
	<b>Part IV Discrete Symmetries and their Consequences</b>	167
<b>16</b>	<b>Charge Conjugation and Parity</b>	169
16.1	Charge Conjugation	170
16.2	Parity	171
16.3	Transformation of the Photon in the Coulomb Gauge	172
16.4	Applications of <b>C</b> and <b>P</b> Invariance	173
16.5	Exercises	178
<b>17</b>	<b>Time-Reversal Invariance</b>	180
17.1	Time-Reversal Invariance of QED	180
17.2	Phenomenological Consequences of Time-Reversal Invariance	183
<b>18</b>	<b>CPT Theorem</b>	186
18.1	CPT Theorem	186
18.2	Applications of the CPT Theorem	187
	<b>Part V Flavor Symmetries</b>	191
<b>19</b>	<b>Global Symmetries</b>	193
19.1	Baryon and Lepton Numbers	193
19.2	Isotopic Spin	194
19.3	Tests of Approximate Isospin Symmetry	198
19.4	Isospin of Pions	200
19.5	Exercises	201

<b>20</b>	<b>Testing Isospin and G Parity</b>	202
20.1	Testing Isospin with Scattering Cross-Sections	202
20.2	G-Parity Invariance of the Strong Interactions	204
20.3	Some Applications of Isospin and G-Parity Conservation	207
20.4	Exercises	208
<b>21</b>	<b>Evidence for New Particles, Quantum Numbers and Interactions</b>	210
21.1	Bringing Order to Chaos	211
21.2	Exercises	215
<b>22</b>	<b>Representation Theory for <math>SU(2)</math></b>	216
22.1	Exercises	218
<b>23</b>	<b><math>SU(3)</math> Symmetry</b>	219
23.1	Lie Algebra of $SU(3)$	220
23.2	Complete Set of Commuting Operators	221
23.3	The Quark Model	224
23.4	Direct (or Tensor) Product States	227
23.5	Exercises	229
<b>24</b>	<b>Tests of <math>SU(3)</math> Symmetry</b>	230
24.1	Coleman–Glashow Relation	230
24.2	Tensor Methods	232
24.3	Tensor Analysis and the Clebsch–Gordan Decomposition	233
24.4	Gell-Mann–Okubo Mass Formula	238
	<b>Part VI Spontaneous Symmetry Breaking</b>	243
<b>25</b>	<b>Spontaneous Symmetry Breaking</b>	245
25.1	Spontaneously Breaking a Discrete Global Symmetry	247
25.2	Spontaneously Breaking a Continuous Global Symmetry	250
<b>26</b>	<b>Spontaneous Symmetry Breaking in Hadronic Physics</b>	254
26.1	Chiral Symmetry	254
26.2	Gell-Mann–Levy Model	256
26.3	Spontaneously Breaking $SU(2)_L \otimes SU(2)_R$	258
26.4	General Derivation of the Goldberger–Treiman Relation	263
26.5	Non-Linear Sigma Model	264
<b>27</b>	<b>Current Algebra and the Adler–Weisberger Relation</b>	266
27.1	Adler–Weisberger Relation	266
27.2	Derivation of the Adler–Weisberger Relation	267

	<b>Part VII Road to the Standard Model: Quantum Chromodynamics</b>	281
<b>28</b>	<b>Quantum Chromodynamics</b>	283
28.1	Five Puzzles of the Quark Model	283
28.2	Local Non-Abelian Symmetry	285
<b>29</b>	<b>Quantizing Non-Abelian Gauge Theory</b>	290
29.1	Perturbation Theory for Non-Abelian Gauge Theories – $R_\xi$ Gauge	292
29.2	Feynman Rules	293
<b>30</b>	<b>Renormalization</b>	296
30.1	Four-Dimensional Lattice Gauge Theory	300
30.2	Strong Coupling Limit of QCD on a Three-Dimensional Lattice	302
<b>31</b>	<b>Deep Inelastic Electron–Nucleon Scattering</b>	305
31.1	The Cross-Section	305
31.2	Bjorken Scaling	308
31.3	Parton Model	309
31.4	Jets	317
31.5	Discovery of the Gluon	318
<b>32</b>	<b>LHC Physics and Parton Distribution Functions</b>	323
	<b>Part VIII Road to the Standard Model: Electroweak Theory</b>	331
<b>33</b>	<b>The Electroweak Theory</b>	333
33.1	Brief Review of Spinors	333
33.2	Electroweak Theory of Leptons	334
33.3	Converting to Dirac Notation	336
33.4	Phenomenological Lagrangian	342
33.5	Muon Beta Decay	344
33.6	Discovery of the $W^\pm$ and $Z^0$ Bosons	350
<b>34</b>	<b>Electroweak Symmetry Breaking</b>	351
34.1	The Higgs Mechanism of Electroweak Symmetry Breaking	353
34.2	“Unitary” Gauge	359
34.3	‘t Hooft– $R_\xi$ Gauge	361
<b>35</b>	<b>Electroweak Phenomena</b>	363
35.1	Custodial $SU(2)$	363
35.2	Elastic Neutrino–Electron Scattering	367
35.3	Forward–Backward Asymmetry in $e^+e^- \rightarrow \mu^+\mu^-$ Scattering	368

<b>36</b>	<b>Deep Inelastic Scattering Revisited</b>	371
<b>37</b>	<b>Weak Interactions of Quarks</b>	379
37.1	Some Classic Weak Decays	380
37.2	Flavor-Changing Neutral Currents	381
<b>Part IX The Standard Model</b>		385
<b>38</b>	<b>Three-Family Model</b>	387
38.1	Prologue	387
38.2	Six-Quark Model	388
38.3	Yukawa Couplings	389
38.4	Mass Matrices and Mass Eigenstate Basis	390
38.5	Kobayashi–Maskawa Model and Three Families	394
<b>39</b>	<b>Determining <math>V_{CKM}</math> and Quark Masses</b>	396
39.1	CP Violation	399
39.2	$K^0 - \bar{K}^0$ Mixing	401
39.2.1	Perturbation Expansion in $H_W$	402
39.2.2	Eigenvalues	404
39.3	$K^0 - \bar{K}^0$ Oscillations: Measuring $\Delta m_K$	406
<b>40</b>	<b>CP-Violating Parameters <math>\epsilon_K</math> and <math>\epsilon'_K</math></b>	407
40.1	Phase Conventions	411
40.2	Theoretical Calculation of $\epsilon_K$	412
40.2.1	Re-Phase-Invariant Formula	415
40.3	$\epsilon_K$ in Terms of the Wolfenstein Parameters	417
40.4	Unitarity Triangle	420
<b>41</b>	<b>Effective Field Theories</b>	422
41.1	Vacuum Polarization	422
41.2	Effective Field Theories above and below $M_Z$	424
41.3	The Higgs Boson	429
<b>42</b>	<b>Anomalies</b>	432
42.1	Anomalies via the Path-Integral Approach	433
42.2	Gauge Anomalies in the Standard Model	439
<b>Part X Neutrino Oscillations</b>		441
<b>43</b>	<b>Neutrino Oscillations: Atmospheric</b>	443
43.1	The Missing Muon Neutrinos	443
43.2	Neutrino Oscillations in Vacuum	446

<b>44</b>	<b>Neutrino Oscillations: Solar</b>	451
44.1	The Solar-Neutrino Problem	451
44.2	The SNO Experiment	455
44.3	The MSW Effect	458
<b>45</b>	<b>Neutrino Oscillations Cont'd: Neutrino Mass and Mixing Angles</b>	465
45.1	LSND and Mini-BooNE	465
45.2	Summarizing Neutrino Results	467
45.3	Neutrino Mass	468
45.4	Arbitrary Parameters of the Standard Model	470
	<b>Part XI Grand Unification</b>	473
<b>46</b>	<b>Grand Unification</b>	475
46.1	Two Roads to Grand Unification	475
46.2	Grand Unified Theory: $SU(5)$	476
46.2.1	Yukawa Unification: $\lambda_b = \lambda_\tau$	482
46.2.2	Spontaneously Breaking $SU(5) \rightarrow SU(3) \otimes SU(2) \otimes U(1)_Y$	484
46.2.3	Nucleon Decay	485
<b>47</b>	<b>Supersymmetry</b>	488
47.1	Two-Component Spinors and the Lorentz Group	488
47.2	$N = 1$ SUSY Algebra	490
47.3	Massless Representations of $N = 1$ SUSY	491
<b>48</b>	<b>Superfields</b>	494
48.1	SUSY Gauge Theory	498
48.2	SUSY Quantum Electrodynamics	500
<b>49</b>	<b>SUSY <math>SU(5)</math></b>	502
49.1	Superfields for SUSY $SU(5)$	502
49.2	Nucleon Decay	505
	<b>Part XII Minimal Supersymmetric Standard Model</b>	509
<b>50</b>	<b>Supersymmetric Standard Model</b>	511
50.1	SUSY Non-Renormalization Theorems	513
50.2	Soft SUSY Breaking	514
50.3	The MSSM Spectrum	515
50.4	Electroweak Symmetry Breaking	515
50.5	Running the Gaugino and Higgs Masses	518
50.6	Mass Eigenstates after Electroweak Soft Breaking	520

<b>51 Spontaneous SUSY Breaking</b>	526
51.1 O’Raifeartaigh Mechanism	526
51.2 Gravity-Mediated SUSY Breaking	529
51.3 Gauge-Mediated SUSY Breaking	531
<b>52 MSSM Phenomenology</b>	535
52.1 Gluino–Squark Detection at the LHC	535
52.2 Simplified Models	539
52.3 Electroweakinos	540
<b>Part XIII Second-Semester Projects</b>	
<b>53 Suggested Term Projects 1</b>	547
<b>54 Suggested Term Projects 2</b>	550
<b>Part XIV Appendices</b>	
<b>Appendix A Gell-Mann–Low Theorem</b>	555
A.1 Interaction Picture	555
A.2 Gell-Mann–Low Theorem	559
<b>Appendix B Wick’s Theorem</b>	562
<b>Appendix C One-Loop Calculations in QED</b>	568
C.1 Vacuum Polarization	568
C.2 The Renormalized Polarization Tensor	573
C.3 Vertex Function and $(g - 2)$	574
C.4 One-Loop Fermion Self Energy	577
<b>Appendix D Renormalization in QED</b>	582
D.1 The Un-renormalized and Renormalized Lagrangian	582
D.2 Generic $\beta$ functions	583
D.3 Callan–Symanzik Equations	587
<b>Appendix E Triangle Anomaly</b>	593
