Preface	ix
1. Introduction	
1.1 Brief history	1
1.2 Tactile information	3
1.3 Tactile robots, academic study, and their industrial applications	5
1.3.1 Tactile covered mobile manipulator	5
1.3.2 Tactile covered humanoid robot	7
1.3.3 Tactile sensing for walking robots	8
1.3.4 Tactile covered robotic hand	9
1.3.5 Tactile robotic buddy	11
1.4 Outline of the book	11
References	12
2. Tactile sensors	
2.1 Tactile sensing from humans to robots	15
2.2 State of the art of tactile sensors	18
2.2.1 Resistive tactile sensor	18
2.2.2 Capacitive tactile sensor	21
2.2.3 Optical tactile sensor	22
2.2.4 Bioinspired tactile sensor	23
2.2.5 Magnetic tactile sensor	23
2.2.6 Piezoelectric	24
2.3 Basic features of tactile sensors	25
2.3.1 Normal and tangential force	25
2.3.2 Vibration	25
2.3.3 Thermal	26
2.3.4 Pretouch proximity	26
2.3.5 Sensor coverage	26
2.4 Open issues and challenges for tactile sensors	27
2.4.1 Hardware	27
2.4.2 Data processing	29
References	30

3. Fundamental knowledge on robotics	
3.1 Introduction	33
3.2 COBOT	34
3.3 Background on spatial description and transformation	35
3.3.1 Coordinate frames	35
3.3.2 Spatial description—position and orientation	37
3.3.3 The description of orientation	42
3.3.4 Transformation—changing the description from frame to frame	45
3.4 Robotic forward kinematics	46
3.5 Robotic inverse kinematics	49
3.5.1 Introduction of inverse kinematics	49
3.5.2 Theory of instantaneous inverse kinematics	50
3.6 Robotic force control	56
3.7 Kinematics implementation in ROS package	62
References	65
4. Fundamental knowledge on machine learning	
4.1 What is machine learning?	67
4.2 From traditional machine learning to deep learning	71
4.3 Deep feedforward networks	72
4.3.1 Basis of the feedforward networks model	72
4.3.2 Backpropagation (BP) learning algorithm	73
4.3.3 Regularization	76
4.4 Convolutional Neural Networks (CNNs)	79
4.4.1 The convolution operation	80
4.4.2 Pooling layer	82
4.4.3 Fully connected layer	84
4.4.4 Data types	84
References	91
5. Tactile information—contact level	
5.1 Introduction	93
5.2 Contact-level information	93
5.2.1 Contact geometry	94
5.2.2 Force and torque	99
5.2.3 Contact events	101
5.2.4 Material properties	103
References	106
6. Tactile information—object level	
6.1 Introduction	111
6.2 Object-level information	111
6.2.1 Object localization	111
6.2.2 Shape	117
6.2.3 Mass and dynamics	122
6.2.4 Contents of containers	125
References	128

7. Tactile information—action level	
7.1 Introduction	133
7.2 Action-level information	133
7.2.1 Action selection and initialization	133
7.2.2 Tactile feedback for low-level control	135
7.2.3 Action termination	147
7.2.4 Action outcome detection	148
7.2.5 Action outcome verification	150
References	150
8. Applications	
8.1 Introduction	155
8.2 Robotic kinematic calibration exploiting tactile servoing and self-touch [18]	155
8.2.1 Continuous self-touch controller	156
8.2.2 Robot jig calibration	158
8.3 Arm-hand coordination and grasping with tactile servoing controller [19]	159
8.3.1 Tactile servoing	161
8.3.2 Multifingered hand IK	165
8.3.3 Simulation grasp	167
8.3.4 Grasp in the real world	167
8.4 In-hand manipulation with tactile servoing controller [20]	168
8.4.1 Object manipulation strategy	168
8.4.2 Finding optimal regrasp points	171
8.4.3 Simulation experiments	174
8.5 The grasped tool's parameter estimation exploiting tactile servoing controller [21]	174
8.6 Visuo-tactile servoing controller and articulated object interaction [22]	179
8.6.1 Interaction-based control and perception strategy	180
8.6.2 Visuo-tactile servoing controller	181
8.6.3 Flap tracking and kinematic parameters estimation	184
References	186
Index	189
