***L*-Functions**

An Elementary Introduction

This book provides an accessible introduction to the theory of L -functions, emphasising their central role in number theory and their direct applications to key results. Designed to be elementary, it offers readers a clear pathway into the subject, starting from minimal background. It describes several important classes of L -functions — Riemann and Dedekind zeta functions, Dirichlet L -functions, and Hecke L -functions (for characters with finite image) — by showing how they are all special cases of the construction, due to Artin, of the L -function of a Galois representation. The analytic properties of abelian L -functions are presented in detail, including the full content of Tate's thesis, which establishes analytic continuation and functional equations via harmonic analysis. General Hecke L -functions are also discussed, using the modern perspective of idèles and adèles to connect their analytic theory with the representation-theoretic approach of Artin's L -functions. A distinguishing feature of this book is its accessibility: while largely avoiding arithmetic geometry, it provides introductions to both algebraic number theory and key aspects of representation theory. This approach ensures that the material is accessible to both beginning graduate students and advanced undergraduates. Applications play a central role throughout, highlighting how L -functions underpin significant results in number theory. The book provides complete proofs of the prime number theorem, Dirichlet's theorem on primes in arithmetic progressions, Chebotarev's density theorem, and the analytic class number formula, demonstrating the power of the theory in solving classical problems. It serves as an ideal introduction for advanced undergraduates and beginning graduate students and can also be a useful reference for preparing a course on the subject.

Part I Classical L -functions and Applications

1	What Is an L-function?	3
1.1	The Riemann ζ Function	4
1.2	Dedekind ζ Functions	6
1.3	Dirichlet L -functions	6
1.4	The Selberg Class	9
1.5	Automorphic Versus Galois: A Tale of Two (Classes of) L -functions	10
	Problems	14
	References	16
2	The Prime Number Theorem	17
2.1	The Riemann–von Mangoldt Exact Formula	26
	Problems	28
	References	28
3	Review of Algebraic Number Theory	29
3.1	Structure of the Ring of Integers	29
3.2	Unique Factorisation of Ideals	30
3.3	Splitting of Primes	30
3.4	Galois Action on the Primes	32
3.5	Frobenius Elements	33
3.6	Dirichlet's Unit Theorem and the Regulator	35
3.7	The Class Group	38
3.8	Completed ζ Functions: The Local Factors at Infinity	39
	Problems	40
	Reference	40
4	A Primer of Representation Theory	41
4.1	Basic Definitions	41
4.2	Constructions on Representations	43
4.2.1	Direct Sum	43

	4.2.2	Dual Representation	44
	4.2.3	Tensor Products and Homomorphisms	44
	4.3	Complete Reducibility	45
	4.4	Character Theory	47
	4.4.1	Further Orthogonality Relations	53
	4.5	Further Operations on Representations.....	54
		Problems	59
		Reference	60
5		The L-function of a Complex Galois Representation.....	61
	5.1	Independence of the Choice of $\mathfrak{P}$	62
	5.2	Convergence of the Euler Product	64
	5.3	The Riemann and Dedekind ζ Functions, and Dirichlet's L -functions, Are Artin L -functions	65
	5.4	The Formalism of Artin L -functions	68
	5.5	Artin's Conjecture on Analytic Continuation	73
	5.6	Factorisation of the Dedekind ζ -function	75
		Problems	77
		References.....	79
6		Dirichlet's Theorem on Arithmetic Progressions	81
	6.1	Pontryagin Duality: Finite Case	81
	6.2	Densities	85
	6.3	Factorisation of the Cyclotomic Dedekind ζ Function	87
	6.4	Infinitely Many Primes in Arithmetic Progressions	88
	6.5	The Philosophy of Special Values	91
	6.5.1	Further Special Values.....	92
		Problems	93
		References.....	94
7		The Chebotarev Density Theorem	95
	7.1	Analytic Proof	97
	7.2	Algebraic Proof.....	103
		Problems	111
		References.....	112
Part II Prerequisites for Tate's Thesis			
8		The Haar Measure.....	115
	8.1	Preliminaries.....	115
	8.2	Haar Measure: Existence.....	117
	8.3	Haar Measure: Uniqueness (up to Constants).....	124
		Problems	126
		References.....	127
9		Abstract Fourier Analysis	129
	9.1	Pontryagin Duality: General Case	129

9.2	The Abstract Fourier Transform	132
	References	134
10	Review of Local Fields	135
	Problems	140
	References	141
11	Restricted Direct Products	143
11.1	Abstract Group Theory	143
11.2	Topological Groups	144
11.3	(Quasi-)Characters of a Restricted Product	146
11.4	Measure Theory	149
11.5	Fourier Analysis	153
	Problems	154
Part III Tate's Thesis		
12	The Local Theory	157
12.1	The Additive Group	160
12.1.1	Choice of Haar Measure	162
12.2	The Multiplicative Group	165
12.2.1	Choice of Haar Measure	168
12.3	Local Zeta Functions I: The General Functional Equation	169
12.4	Local Zeta Functions II: Computation of the Local Factors	174
12.4.1	Real Case	174
12.4.2	Complex Case	178
12.4.3	p -Adic Case	181
12.4.4	Non-vanishing of the Standard Local ζ Functions	187
	Problems	187
	References	189
13	The Global Theory	191
13.1	The Additive Group: The Adèles	191
13.1.1	The Field as a Subring of the Adèles	193
13.1.2	The Poisson Formula	198
13.1.3	Analogy with the Geometric Riemann-Roch Theorem ...	204
13.2	The Multiplicative Group: The Idèles	208
13.2.1	Multiplicative Fundamental Domain	210
13.2.2	The Quasi-Characters of $I_k/k^\times$	215
13.3	Global Zeta Functions	216
	Problems	222
	Reference	222
14	Hecke L-functions	223
14.1	Characters of the Idèles	225
	Problems	229
	Reference	230

15	Recovering the Classical Theory	231
15.1	The Riemann Zeta Function	231
15.2	Dedekind ζ Functions	232
15.3	The General Case: L -functions of Characters	235
15.3.1	Idèlic Character	235
15.3.2	Choice of the Adèlic Function	235
15.3.3	Fourier Transform	236
15.3.4	The ζ -Function	236
15.3.5	Conclusion: Analytic Continuation and Functional Equation	238
	Problems	241
16	An Extended Example: The L-function of a CM Elliptic Curve	243
16.1	The L -function of an Elliptic Curve	243
16.2	Interpretation as a Hecke L -function	252
16.3	Interpretation as the L -function of a Representation	255
	Problems	258
	References	258
	Index	259
