

Contents

1	Introduction.....	1
1.1	Bayesian Optimization.....	1
1.1.1	Bayesian Optimization in a Nutshell.....	1
1.1.2	Gaussian Process-Based Bayesian Optimization.....	4
1.2	Multi-Fidelity and Multiple Information Source Optimization.....	6
1.2.1	Optimizing over Multiple Information Sources.....	6
1.2.2	Making the Necessary Distinctions.....	7
1.2.3	Multi-Fidelity Optimization.....	9
1.2.4	Multiple Information Sources Optimization.....	10
1.3	Relations with Other Settings.....	12
2	MISO-AGP: Dealing with Multiple Information Sources via Augmented Gaussian Process.....	15
2.1	The Augmented Gaussian Process.....	15
2.1.1	The Underlying Idea: GP Sparsification Instead of GP Reification.....	15
2.1.2	Fitting an AGP on Multiple Information Sources.....	16
2.2	An Acquisition Function for MISO-AGP.....	19
2.3	A Python Implementation of MISO-AGP in BoTorch.....	21
2.3.1	SingleTaskAugmentedGP.....	22
2.3.2	AugmentedUpperConfidenceBound.....	22
2.4	Experiments and Comparison Against Other Approaches.....	23
2.4.1	BoTorch Native Test Problems.....	24
2.4.2	Additional Test Problems from the Literature.....	24
2.4.3	Competing Algorithms.....	26
2.4.4	Experimental Setting.....	27
2.4.5	Relevant Results.....	28
3	MISO-AGP in Action: Selected Applications.....	31
3.1	Fair and Green Machine Learning.....	31
3.1.1	Call for Social and Environmental Sustainability of ML and AI.....	31

3.1.2	Fairness in ML.....	33
3.1.3	Green ML.....	34
3.1.4	Addressing Fairness and Energy Efficiency Simultaneously....	35
3.1.5	Methodological Background: Multi-Objective Optimization...	35
3.1.6	FanG-HPO: Fair and Green HPO of ML Algorithms.....	37
3.1.7	Experiments and Results.....	44
3.2	Risk-Aware Optimal Sensor Placement.....	48
3.2.1	Motivations.....	48
3.2.2	A Risk-Averse OSP Formulation.....	49
3.2.3	Combinatorial MISO-AGP for Risk-Averse OSP.....	50
3.2.4	Experiments.....	51
4	Bayesian Optimization and Large Language Models.....	55
4.1	Introduction.....	55
4.1.1	Large Language Models and Bayesian Optimization.....	55
4.1.2	Surrogate Models and the Transformer Architecture.....	57
4.1.3	General Issues in Optimization and Numerics.....	60
4.1.4	Prompt/Instruction Optimization and Related Work.....	61
4.2	Large Language Models to Enhance Bayesian Optimization.....	67
4.2.1	Transformer as a Human Optimizer.....	67
4.2.2	LLAMBO: General Architecture and Warm-Starting the BO Process.....	72
4.3	Bayesian Optimization to Enhance Large Language Models.....	74
4.3.1	Hard Prompt Tuning via Bayesian Optimization.....	74
4.3.2	InstructZero.....	77
4.3.3	Instinct.....	80
4.3.4	BOInG.....	81
4.3.5	Comparing Performances Among Approaches.....	85
4.4	Conclusions, Limitations, and Perspectives.....	87
	References.....	91
