

BASIC TISSUES | CELL BIOLOGY

Chapter 1 | EPITHELIUM | CELL BIOLOGY

Classification of epithelia, 2
 Epithelial cell polarity, 2
Box 1-A | General characteristics of epithelia, 2
 **Concept Mapping | Epithelium, 3**
 Apical domain, 3
 Cilia. Multiple motile cilia, 3
 Single or primary non-motile cilium, 3
 Microvilli, 7
 Stereocilia (stereovilli), 7
 Cell adhesion molecules and cell junctions, 7
 Ca²⁺-dependent molecules. Cadherins, 7
 Selectins (C-type lectins), 8
Primer 1-A | Ciliogenesis. Primary cilium and Hedgehog signaling, 9
 Ca²⁺-independent molecules. Superfamily of immunoglobulin-like cell adhesion molecules (Ig-CAMs), 9
 Integrins, 11
Primer 1-B | Transmigration of leukocytes through the endothelial barrier, 12
 Cell junctions, 12
 Tight junctions, 13
 Adhering junctions, 13
Primer 1-C | ADAM, a member of the family of sheddase proteins, 15
 Hemidesmosomes, 16
 Gap junctions or communicating junctions, 17
Box 1-B | Tight junctions and disease, 18
 Connexin mutations, 19
 Basement membrane, 20
Box 1-C | Periodic acid–Schiff (PAS) reaction, 21
Primer 1-D | Cell adhesion molecules, cell junctions and basement membrane, 22
 Cytoskeleton, 22
 Microfilaments, 23
Primer 1-E | Actin microfilaments: Assembly and disassembly, 25
 Microtubules, 26
Box 1-D | Wiskott-Aldrich syndrome, 26
 Centrosomes, 26
 Axoneme, 28
 Microtubule-targeting agents, 29
Box 1-E | Centrosomes, centromeres and kinetochores, 29
 Ciliopathies, 29
Box 1-F | Bardet-Biedl syndrome, 30
 Cargo transport and motor proteins, 30
 Intraciliary transport, 30
Primer 1-F | Intraciliary and axonal (neuronal) transport, 31
 Axonal (neuronal) transport, 32
 Myosin motor proteins, 32
Primer 1-G | Myosin motor proteins, 33
 Smooth muscle and myosin light-chain kinase, 33
 Intermediate filaments, 34
Box 1-G | Summary: Intermediate filament proteins, 36
 Hemidesmosomes and skin blistering diseases, 36
 Cell nucleus, 37
 Nuclear lamina, 38
 Laminopathies, 39
Box 1-H | Clinical aspects of several laminopathies, 40
 Chromatin, 40
 Chromatin condensation and transcription, 40
 Nucleolus, 42
 Protein nuclear import and export, 43
 X chromosome inactivation, 44
 Cellular localization of nucleic acids, 44

Cell cycle, 44
Primer 1-H | Ran GTPase directs nucleocytoplasmic bidirectional transport, 45
 Autoradiography and FACS, 46
 Disassembly of the nuclear envelope, 46
 The mitotic cycle, 47
Box 1-I | PAS and Feulgen reactions, 47
Box 1-J | Basophilia and acidophilia, 47
 Karyotyping (chromosome analysis), 47
 Retinoblastoma (Rb) protein, 47
Box 1-K | Cytochemistry and histochemistry methods used in Histology and Pathology, 49
 Retinoblastoma tumors, 50
 p53 protein, a transcription regulator, 51
Primer 1-I | Disassembly and reassembly of the nuclear envelope, 52
Box 1-L | Summary of cell division, 54
 Telomerase: Aging, senescence and cancer, 55
Box 1-M | Li-Fraumeni syndrome, 56
Box 1-N | The telomere length: Shelterin and telomerase, 57
 Basic concepts of medical genetics, 58
 Chromosomal disorders, 58
Concept Mapping | A glossary of medical genetics, 59
 Mendelian inheritance, 60
Box 1-O | Pedigree analysis, 61
 Non-mendelian inheritance, 62
 **Concept Mapping | Epithelium, 63**
 **Essential Concepts | Epithelium, 63**

Chapter 2 | EPITHELIAL GLANDS | CELL BIOLOGY

Epithelial glands, 68
 Types of epithelial glands, 68
 Components of exocrine glands, 68
 Composition of secretion of an exocrine gland, 69
 Components of a branched (compound) gland, 72
 Mechanisms of secretion of an exocrine gland, 72
 Plasma membrane and cytomembranes, 73
 Plasma membrane, 73
 Types of lipids and lipid domains, 73
Box 2-A | Lipid rafts, 73
 Plasma membrane proteins, 74
 Transporter and channel proteins, 75
Box 2-B | Glycocalyx, 75
 Endoplasmic reticulum, 75
Primer 2-A | Freeze-fracture, 76
 Freeze-fracture technique, 77
 Protein synthesis and sorting, 77
 Golgi apparatus, 79
 Functions of the Golgi apparatus, 79
Primer 2-B | Protein synthesis, 80
 Vesicle transport, 81
 Lysosomal sorting pathway, 82
 Cholesterol uptake by receptor-mediated endocytosis, 82
 Sorting of clathrin- and COP-coated vesicles, 83
Box 2-C | Familial hypercholesterolemia, 83
Primer 2-C | Clathrin- and COP-mediated vesicle transport and targeting of transporting vesicles, 84
 Lysosomes, 84
Box 2-D | Macroautophagy and autophagy, 85
 Phagocytosis, endocytosis and macroautophagy, 85
Primer 2-D | Lysosomes, 86
 Lysosome storage disorders, 87
 Mitochondria, 87
Box 2-E | Lysosome hydrolytic enzymes can be secreted, 87
Primer 2-E | Lysosome storage disorders: Tay-Sachs disease and Gaucher's disease, 88
 Mitochondria participate in apoptosis, steroidogenesis and thermogenesis, 90

Mitochondria maternal inheritance, 91
 Mitochondria replacement therapies, 93
 Peroxisomes, 93
 Peroxisome biogenesis, 93
 Peroxisome biogenesis disorders (PBDs), 94
 **Concept Mapping | Epithelial Glands, 96**
 **Essential Concepts | Epithelial Glands, 96**

Chapter 3 | CELL SIGNALING | CELL BIOLOGY | PATHOLOGY

Cell signaling mechanisms, 100
 Cell signaling and feedback action, 100
 Types of signaling molecules and their ligands, 100
 Steroid hormones, 100
Box 3-A | Steroid hormones, 101
 Peptide hormones and growth factors, 101
 Nitric oxide, 102
 Neurotransmitters, 102
Box 3-B | Peptide hormones, 102
 Eicosanoids, 103
Box 3-C | Protein kinases and protein phosphorylation, 103
 Cell surface receptors, 103
 G protein-coupled receptors, 103
 Receptor and non-receptor tyrosine kinases, 104
 Cytokine receptors, 104
 Receptors with tyrosine phosphatase activity, 105
 Major signal transduction pathways, 106
 The cAMP pathway, 106
 The cGMP pathway, 107
 The phospholipid-calcium pathway, 107
 The calcium-calmodulin pathway, 107
 The Ras-Raf / MAP kinase (MEK-ERK) pathway, 108
 The JAK-STAT pathway, 108
 NF- κ B transcription factor pathway, 109
 The integrin-actin pathway, 109
 Specific signaling pathways, 109
 Stem cell niches and stemness, 110
 Regenerative medicine and cell plasticity, 110
Primer 3-A | Specific cell signaling pathways, 111
Primer 3-B | Specific cell signaling pathways, 112
Box 3-D | Epithelial-mesenchymal transition (EMT), 113
 Cell culture, 113
 Single-cell genomics, 115
 Cell and tissue injury, 115
Concept Mapping | Cell death, necrosis and apoptosis, 116
 Necrosis, 117
 Apoptosis, 117
 What a nematode worm told us about apoptosis, 118
 Extrinsic and intrinsic signaling of apoptosis, 119
 Caspases: Initiators and executioners of cell death, 120
 Intrinsic pathway: Mitochondria cytochrome c, 120
Apoptosis and the immune system, 120
Apoptosis and neurodegenerative diseases, 120
 Necroptosis, 121
Primer 3-C | Necroptosis, 122
 Ferroptosis, 123
Primer 3-D | Ferroptosis, 123
 Mitochondria permeability transition, 124
 Intracellular degradation, 125
 Autophagy pathway, 125
 Ubiquitin-proteasome pathway, 125
 Mitophagy signaling pathway, 126
 Neoplasia, 126
Box 3-E | Proto-oncogenes and tumor suppressor proteins, 128
 Proto-oncogenes, oncogenes and tumor suppressor genes, 129
 Identification of oncogenes in retroviruses, 130

Essential Concepts | Cell Signaling, 131
Concept Mapping | Cell Signaling, 132

Chapter 4 | CONNECTIVE TISSUE

Classification, 136
Box 4-A | Types of collagens, 136
 Components of connective tissue, 137
 Fibroblast, 137
Box 4-B | Diverse cell sources of collagen, 138
 Synthesis, secretion and assembly of collagen, 139
 Ehlers-Danlos syndrome, 140
 Elastic fibers, 140
Box 4-C | Characteristics of collagens, 142
 Marfan's syndrome, 142
 Macrophages, 144
Box 4-D | Metachromasia, 145
 Mast cells, 146
 Plasma cells, 146
Box 4-E | Allergic hypersensitivity reactions, 146
 Extracellular matrix (ECM), 147
 Degradation of the ECM, 148
Molecular biology of tumor invasion, 149
Primer 4-A | Tumor invasion and metastasis, 150
 Adipose tissue or fat, 151
 Adipogenesis, 151
 Lipid storage and breakdown (lipolysis), 153
Box 4-F | Visualization of fat in histology sections, 154
 Leptin and obesity, 154
 Cartilage, 155
Box 4-G | Chondrocytes respond to mechanical stress, 155
Box 4-H | Cartilage repair after injury, 155
 Chondrogenesis, 155
 Types of cartilage, 155
Box 4-I | Structure of the articular cartilage, 160
Box 4-J | Sox9 transcription factor, 160
 Bone, 160
 Macroscopic structure of mature bone, 160
 Microscopic structure of mature bone, 160
 Periosteum and endosteum, 161
 Bone matrix, 161
 Cellular components of bone, 162
 The osteoblast, 163
Primer 4-B | Genes involved in osteoblast differentiation, 166
 Differentiation of preosteoblasts to osteoblasts to osteocytes, 166
 The osteoclast, 167
 Osteoclastogenesis, 170
 Postmenopausal osteoporosis, 171
 Osteopetrosis and osteomalacia, 171
 **Concept Mapping | Connective Tissue, 172**
 **Essential Concepts | Connective Tissue, 173**

Chapter 5 | OSTEOGENESIS

Osteogenesis (Bone development or ossification), 178
 Intramembranous ossification, 178
 Endochondral ossification, 178
 Secondary centers of ossification, 180
 Zones of endochondral ossification, 180
 Growth in length of the diaphysis, 181
Hedgehog signaling: The epiphyseal growth plate and dwarfism, 182
 Conversion of trabecular bone into osteons, 183
Box 5-A | Metaphyseal chondrodysplasia, 184
 Bone remodeling, 187
 Bone fracture and healing, 188
Primer 5-A | Bone fracture and healing, 190
 Bone disorders, 191

Concept Mapping | Metabolic and hereditary bone disorders, 192
Joints, 192

Rheumatoid arthritis and osteoarthritis, 192

 Concept Mapping | Osteogenesis, 195

Essential Concepts | Osteogenesis, 196

Chapter 6 | BLOOD AND HEMATOPOIESIS

Blood, 200

Plasma, 200

Red blood cells (RBC; erythrocytes), 200

Cytoskeletal and hemoglobin abnormalities of red blood cells, 200

Hemoglobin A1c (glycated hemoglobin) and diabetes mellitus, 201

Erythroblastosis fetalis, 201

Box 6-A | Hemolysis in erythroblastosis fetalis, 202

Leukocytes, 202

Granulocytes, 202

Neutrophils, 202

Eosinophils, 203

Box 6-B | Blood cells/ μL or mm^3 and two major proteins, 203

Box 6-C | Neutrophils and their cytoplasmic granules, 204

Basophils, 204

Box 6-D | Eosinophilic esophagitis, 205

Agranulocytes, 205

Lymphocytes, 205

Monocytes, 206

Leukocyte recruitment and inflammation, 207

Box 6-E | Leukocyte adhesion deficiency (LAD), 208

Mast cell, eosinophil and asthma, 208

Platelets, 208

Coagulation disorders, 210

Hemostasis and blood clotting, 211

Box 6-F | Hemophilia, 211

Primer 6-A | Blood clotting pathways, 212

Hematopoiesis, 213

The vascular niche, 213

The endosteal niche, 213

Hematopoietic cell populations, 213

Hematopoietic growth factors, 216

Erythroid lineage, 216

Leukopoiesis, 217

Granulocytes, 217

Box 6-G | Anemia, 219

Agranulocytes. Lymphocytes, 221

Monocytes, 221

Colony-stimulating factors and interleukins, 224

c-kit receptor and its ligand stem cell factor, 225

Leukemias, 227

Megakaryocytes and platelets, 229

Iron-overload disorders, 229

Primer 6-B | Uptake of iron by internalization of transferrin and iron-linked disorders, 230

Box 6-H | Iron homeostasis and transferrin, 231

Megaloblastic anemia, 232

 Concept Mapping | Blood and Hematopoiesis, 233

Essential Concepts | Blood and Hematopoiesis, 233

Chapter 7 | MUSCLE TISSUE

Skeletal muscle, 238

Skeletal muscle cell or fiber, 238

The sarcomere, 240

Components of the sarcomere, 241

Sarcomere changes during muscle contraction, 243

Creatine phosphate, 244

Neuromuscular junction: Motor end plate, 244

Disorders of neuromuscular synaptic transmission, 244

Box 7-A | Myasthenia gravis, 244

T tubules, calcium ions and muscle contraction, 245

Box 7-B | Functional types of muscle fibers, 245

Muscular dystrophies, 246

Satellite cells and muscle repair, 249

Neuromuscular spindle and Golgi tendon organ, 249

Primer 7-A | Satellite cells and muscle repair, 250

Cardiac muscle, 253

Transport proteins and the sarcolemma, 253

Myocardial infarction, 253

Smooth muscle, 255

Mechanism of smooth muscle contraction, 256

 Concept Mapping | Muscle Tissue, 258

Essential Concepts | Muscle Tissue, 258

Chapter 8 | NERVOUS TISSUE

Development of the nervous system, 262

Box 8-A | Ectoderm embryonic cell layer, 263

Cell types: Neurons, 263

Box 8-B | Brain development, 264

Types of neurons, 264

Designation of neurons and axons, 264

Synaptic terminals and synapses, 265

Axonal transport, 265

Box 8-C | Neural tube defects, 265

Box 8-D | Neuronal migration, 265

Box 8-E | Cerebral cortex, 267

Glial cells, 270

Astrocytes, 271

Box 8-F | Neurotransmitters: Mechanisms of action, 271

Oligodendrocytes, 272

Myelination, 272

Myelin, 274

Box 8-G | Charcot-Marie-Tooth disease, 275

Unmyelinated nerve fibers, 275

Demyelinating diseases, 277

Neurodegenerative diseases, 277

Box 8-H | APOE4 gene and Alzheimer's disease, 281

Microglia, 281

Function of microglia, 281

Primer 8-A | Microglia, 282

Ependyma, 283

Choroid plexus, 283

Cerebrospinal fluid, 283

Brain permeability barriers, 285

Peripheral nervous system, 287

Structure of a peripheral nerve, 287

Segmental demyelination and axonal degeneration, 287

Autonomic nervous system, 291

Enteric nervous system, 291

Sympathetic and parasympathetic nervous divisions, 291

Box 8-I | Neurotrophins, 291

Box 8-J | Schwannomas, 291

Autonomic (sympathetic) ganglia, 293

Sensory (spinal) ganglia, 293

Neurohistochemistry, 293

Box 8-K | Neurotransmitters: Classification, 294

 Concept Mapping | Nervous Tissue, 295

Essential Concepts | Nervous Tissue, 295

Chapter 9 | SENSORY ORGANS: VISION AND HEARING

Eye, 300

Development of the eye, 300

Outer tunic: Sclera and cornea, 301

Cornea, 301

Box 9-A | Development of the cornea, 301

Middle tunic: Uvea, 302

Box 9-B | Cornea transplantation, 302

- Box 9-C | Uvea**, 303
 Three chambers of the eye, 305
 Lens, 309
 Accommodation, 311
Box 9-D | Cataracts, 312
 Inner layer: Retina, 312
 Cell layers of the retina, 313
Box 9-E | Detachment of the retina, 313
 Photoreceptor neurons: Rods and cones, 313
Box 9-F | The retina, 314
 Conducting neurons: Bipolar and ganglion cells, 314
 Association neurons: Horizontal and amacrine cells, 315
 Supporting glial cells: Müller cells, 317
 Fovea centralis and optic disk, 317
 The eyelids, conjunctiva and the lacrimal glands, 317
Box 9-G | The synaptic ribbon, 321
Box 9-H | Retinitis pigmentosa, 322
Box 9-I | Age-related macular degeneration (AMD), 323
Box 9-J | Red eye and conjunctivitis, 325
 Ear, 326
 External ear, 326
 Middle ear, 327
 Inner ear: Development of the inner ear, 328
 General structure of the inner ear, 328
 Vestibular system, 329
 Semicircular canals, 329
 Otolithic organs: Utricle and saccule, 332
Box 9-K | Ménière's disease, 333
 Cochlea, 333
 Organ of Corti, 333
 Molecular and mechanical aspects of the hearing process, 335
 Deafness and balance, 338
 **Essential Concepts | Sensory Organs: Vision and Hearing (Eye)**, 339
 **Concept Mapping | Sensory Organs: Vision and Hearing (Ear)**, 342

ORGAN SYSTEMS | PROTECTION OF THE BODY

Chapter 10 | IMMUNE-LYMPHATIC SYSTEM

- Components of the immune-lymphatic system, 344
 Types of immunity, 345
Box 10-A | Toll-like receptors, 345
 Properties of adaptive or acquired immunity, 346
 Development and maturation of B cells in bone marrow, 346
 Major histocompatibility complex (MHC) and the human-equivalent leukocyte antigens (HLA), 346
Box 10-B | CD antigens, 347
 T-cell receptor, 347
 LCK and CD4 and CD8 coreceptors, 348
Box 10-C | The immune synapse, 348
 Thymocyte maturation in the thymus: Positive and negative selection, 348
Primer 10-A | Structure of the T cell receptor and class I and II major histocompatibility complex (MHC), 349
 CD4⁺ T-cell subsets: TH1, TH2, TH17 and T_H cells, 350
Box 10-D | Immunoglobulins, 351
 How do CD4⁺ helper T cells help?, 351
Box 10-E | Multiple myeloma, 352
 How do CD8⁺ cytolytic T cells kill?, 352
 Natural killer cells, 353
 Acquired immunodeficiency syndrome (AIDS), 354

- Box 10-F | HIV reproductive cycle**, 354
Primer 10-B | Immune system and HIV infection, 355
 Hypersensitivity reactions, 356
 Complement system, 358
 Inflammation, 358
Primer 10-C | Complement system, 359
 Acute inflammation, 360
Concept Mapping | Acute inflammation, 360
Concept Mapping | Acute and chronic inflammation compared, 362
 Resolution of acute inflammation, 362
 Types of acute inflammation, 363
 Chronic inflammation, 363
 Lymphoid organs, 364
 Lymph nodes, 365
 Lymphadenitis and lymphomas, 365
Box 10-G | Lymph flow and dendritic cell migration, 368
 Thymus, 368
 Development of the thymus, 368
 Development of thymic epithelial cells, 368
Box 10-H | Aire gene and autoimmunity, 369
 Structure of the thymus, 369
Box 10-I | DiGeorge syndrome, 370
 Spleen, 371
 Vascularization of the spleen, 375
 White pulp, 380
 Red pulp, 380
 How does the spleen react when confronting a pathogen?, 380
 Sickle cell disease, 380
Box 10-J | CRISPR gene-editing: A novel therapy for sickle cell disease, 380
 Asplenia, 381
 Cellular immunotherapy, 382
 Chimeric antigen receptor (CAR) T-cell therapy, 383
 **Concept Mapping | Immune-Lymphatic System**, 384
 **Essential Concepts | Immune-Lymphatic System**, 384

Chapter 11 | INTEGUMENTARY SYSTEM

- Organization and types of skin, 390
 Epidermis, 390
 Differentiation of keratinocytes, 391
 Melanocytes, 392
 Melanin production by melanocytes, 394
Box 11-A | Cornified cell envelope disorders, 394
Box 11-B | Disorders of keratinization, 397
Box 11-C | Differentiation of melanocytes, 398
 Langerhans cells (dendritic cells), 399
 Merkel cell-neurite complex, 400
Box 11-D | Leprosy, 400
 Dermis, 401
 Wound healing, 401
Concept Mapping | Wound healing, 401
 Psoriasis, 403
 Tumors of the epidermis, 403
Box 11-E | Tumors of the epidermis, 403
 Epithelial antimicrobial proteins, 405
 Skin: Blood and lymphatic supply, 405
 Cutaneous end-organ complexes, 406
Box 11-F | Vascular disorders of the skin, 407
 Hypodermis (superficial fascia), 409
 Development of the hair follicle, 409
 Structure of the hair follicle, 409
 Hair follicle regeneration: Hair follicle stem cell (HFSC), 411
 Glands of the skin. Sebaceous glands, 412
 Sweat glands, 414

Cystic fibrosis, 415

Fingernails, 415

Concept Mapping | Integumentary System, 417

Essential Concepts | Integumentary System, 417

ORGAN SYSTEMS | BLOOD CIRCULATORY SYSTEMS**Chapter 12 | CARDIOVASCULAR SYSTEM**

The cardiovascular system, 422

Heart, 422

Conductive system of the heart, 422

Purkinje fibers, 422

Blood vessels, 423

Arteries, 423

Large elastic arteries (conducting vessels), 424

Aortic aneurysms, 424

Muscular arteries (distributing vessels), 424

Arterioles (resistance vessels), 425

Capillaries (exchange vessels), 425

Types of capillaries, 426

Arterial and venous portal systems, 427

Veins (capacitance, or reservoir, vessels), 428

Vasculitis, 430

Box 12-A | Capillary endothelial barriers, 430

Lymphatic vessels, 432

Primer 12-A | Vasculitis, 433**Box 12-B | Lymphatic vascular disorders, 433**

Edema, 434

Hemorrhage, 435

Atherosclerosis, 435

Functions of the vascular endothelium, 435

Primer 12-B | Atherosclerosis, 436**Primer 12-C | Vasculogenesis and angiogenesis, 438**

Vasculogenesis and angiogenesis, 439

Angiogenesis and tumor progression, 440

Box 12-C | Kaposi's sarcoma, 440

Concept Mapping | Cardiovascular pathogenesis, 441

Thrombosis, embolism and infarction, 441

Hypertension, 442

Concept Mapping | Hypertension, 442

Concept Mapping | Cardiovascular System, 443

Essential Concepts | Cardiovascular System, 443

Chapter 13 | RESPIRATORY SYSTEM

The respiratory system, 448

Nasal cavities and paranasal sinuses, 448

Nasopharynx, 448

Olfactory neuroepithelium, 449

Box 13-A | Olfactory neuroepithelium, 449

Larynx, 451

Box 13-B | True vocal cords or folds, 451

Trachea and primary bronchi, 453

Box 13-C | Airway mucus, 453

Cystic fibrosis, 453

Box 13-D | Cystic fibrosis gene, 455

Segmentation of the bronchial tree, 455

Pulmonary lobule and pulmonary acinus, 458

Club cells (formerly Clara cells), 460

Respiratory portion of the lung, 460

The alveolus, 460

Alveolar type 2 (AT2) cells, 464

Bronchopulmonary diseases, 467

Asthma, 467

Chronic obstructive pulmonary disease, 467

Acute respiratory distress syndrome, 468

Primer 13-A | Asthma, 468

Lung cancer, 472

Box 13-E | Lung cancer immunotherapy, 474

Pleura, 474

Disorders of the pleura, 475

Essential Concepts | Respiratory System, 475

Concept Mapping | Respiratory System, 476

Chapter 14 | URINARY SYSTEM

The kidneys, 480

The renal vascular system, 480

Vasa recta, 480

Renal medullary pyramid, renal lobe and renal lobule, 482

The uriniferous tubule, 482

The renal corpuscle, the filter, 483

Glomerular filtration barrier, 483

Pathology of the GBM, 484

Box 14-A | Acute kidney injury, 485

Mesangium, 489

Podocyte injury, 490

Primer 14-A | Pathology of the renal corpuscle:

Glomerulonephritis, 492

Juxtaglomerular apparatus, 493

Proximal convoluted tubule, the metabolic unit, 493

Loop of Henle, 493

Box 14-B | Fibroblast growth factor (FGF) 23, the kidneys

and phosphate metabolism, 495

Distal convoluted tubule, 495

Collecting tubule/duct, 497

Renal interstitium, 497

Micturition, 498

Box 14-C | Osmoregulation, 501

Regulation of water and NaCl absorption, 501

Primer 14-B | Renin-angiotensin system (RAS), 502

Renin-angiotensin system (RAS), 503

Countercurrent multiplier and exchanger, 503

Mechanism of action of diuretics, 506

 Essential Concepts | Urinary System, 507

Concept Mapping | Urinary System, 507

ORGAN SYSTEMS | THE ALIMENTARY SYSTEM**Chapter 15 | UPPER DIGESTIVE SEGMENT**

Mouth (oral cavity), 512

Lips, 512

Gingiva, hard and soft palate, 513

Tongue, 513

Types and function of taste receptor cells, 513

Tooth, 516

Tooth development, 517

Dental pulp, 518

Periodontium, 518

Odontoblasts, 518

Ameloblasts, 520

Non-neoplastic and neoplastic lesions of the oral mucosa, 521

General organization of the digestive tube, 522

Microvasculature of the stomach, 523

Enteric nervous system (ENS), 525

Esophagus, 525

Box 15-A | Peptic ulcer disease (PUD), 527**Box 15-B | Gastroesophageal reflux disease (GERD), 527**

Stomach, 527

Cardia region of the stomach, 529

Fundus-body region of the stomach, 529

- Chief cells and parietal cells, 531
- Secretion of hydrochloric acid, 533
- Box 15-C | **Ménétrier's disease**, 533
- Box 15-D | **Autoimmune gastritis**, 533
- Infection with *Helicobacter pylori*, 534
- Primer 15-A | *Helicobacter pylori*, chronic gastric inflammation and ulcers, 535
- Gastroenteroendocrine cells, 536
- Box 15-E | **Zollinger-Ellison syndrome**, 537
- Pyloric region of the stomach, 538
-  **Concept Mapping | Upper Digestive Segment**, 539
-  **Essential Concepts | Upper Digestive Segment**, 539

Chapter 16 | LOWER DIGESTIVE SEGMENT

- Small intestine, 544
- The peritoneum, 544
- Intestinal wall, 544
- Microcirculation of the small intestine, 545
- Innervation and motility of the small intestine, 546
- Histology differences between the duodenum, jejunum and ileum, 547
- Villi and crypts of Lieberkühn, 547
- Enterocytes: Absorptive cells, 547
- Trafficking of peptides and sugars, 549
- Trafficking of lipids and cholesterol, 551
- Goblet cells, 553
- Gastroenteroendocrine cells (GECs), 553
- Tuft cells, 553
- Intestinal stem cells (ISCs), 553
- Protection of the small intestine, 554
- Intestinal tight junction barrier, 554
- Peyer's patches, 555
- Follicle-associated epithelium (FAE), 556
- Box 16-A | **Development of Peyer's patches**, 558
- Polymeric IgA, 559
- Paneth cells, 560
- Intestinal antimicrobial proteins (AMPs), 561
- Box 16-B | **Lgr5⁺-intestinal stem cells are regulated by FoxL1⁺-telocytes located in the lamina propria**, 561
- Inflammatory bowel diseases, 562
- Malabsorption syndromes, 563
- Large intestine, 563
- The appendix, 566
- The rectum, 566
- Hirschsprung's disease, 566
- Colorectal tumorigenesis, 568
- Primer 16-A | **APC (adenomatous polyposis coli) and cancer of the colon**, 569
- BRAF-mutant metastatic colon cancer, 570
- Box 16-C | **Lynch syndrome**, 570
-  **Concept Mapping | Lower Digestive Segment**, 571
-  **Essential Concepts | Lower Digestive Segment**, 571

Chapter 17 | DIGESTIVE GLANDS

- Structure of a salivary gland, 576
- Box 17-A | **Classification of exocrine glands**, 576
- Saliva, 576
- Parotid gland, 576
- Submandibular (submaxillary) gland, 577
- Sublingual gland, 577
- Exocrine pancreas, 577
- Box 17-B | **Parotid gland: Mumps, rabies, autoimmunity and tumors**, 579
- Pancreatic tumors, 582
- Functions of the pancreatic acinus, 585
- Pancreatitis and cystic fibrosis, 585
- Liver, 587
- Organization of the hepatic lobule, 587

- Concepts of the hepatic lobule, 589
- Hepatocyte, 589
- Peroxisomes, 591
- Perisinusoidal cells, 594
- Perisinusoidal cells and chronic liver disease, 595
- Box 17-C | **Liver iron-overload disorders**, 595
- Alcoholism and fatty liver (alcoholic steatohepatitis), 595
- Chronic hepatitis and cirrhosis, 595
- Box 17-D | **Liver regeneration**, 597
- Metabolism of bilirubin, 598
- Gallbladder, 598
- Primer 17-A | **Metabolism of bilirubin**, 599
- Hyperbilirubinemia, 599
- Mechanism of bile secretion, 600
- Composition of the bile, 601
- Conditions affecting bile secretion and transport, 602
-  **Concept Mapping | Digestive Glands**, 603
-  **Essential Concepts | Digestive Glands**, 603

ORGAN SYSTEMS | THE ENDOCRINE SYSTEM

Chapter 18 | NEUROENDOCRINE SYSTEM

- Hypophysis, 608
- Embryologic origin of the hypophysis, 608
- Hypothalamohypophyseal portal circulation, 608
- Histology of the pars distalis (anterior lobe), 610
- Hormones secreted by acidophils: Growth hormone and prolactin, 612
- Growth hormone, 612
- Gigantism (in children) and acromegaly (in adults), 613
- Prolactin, 613
- Hyperprolactinemia, 614
- Hormones secreted by basophils: Gonadotropins, TSH and ACTH, 615
- Gonadotropins: Follicle-stimulating hormone and luteinizing hormone, 615
- Infertility, 616
- Thyroid-stimulating hormone (thyrotropin), 616
- Hypothyroidism, 616
- Adrenocorticotrophic hormone, 617
- Cushing's disease, 618
- Neurohypophysis, 618
- Histology of the neurohypophysis, 618
- Function of AVP/ADH and oxytocin, 618
- Hypothalamic diabetes insipidus, 621
- Pineal gland, 622
- Development of the pineal gland, 622
- Histology of the pineal gland, 622
- Pinealocytes secrete melatonin, 625
- Circadian rhythmicity and sleep homeostasis, 625
- Pinealomas, 627
-  **Concept Mapping | Neuroendocrine System**, 628
-  **Essential Concepts | Neuroendocrine System**, 628

Chapter 19 | ENDOCRINE SYSTEM

- Thyroid gland, 632
- Development of the thyroid gland, 632
- Histologic organization of the thyroid gland, 632
- Function of the thyroid gland, 632
- Graves' disease and hypothyroidism, 636
- Box 19-A | **Pathology of the thyroid gland**, 636
- Calcium regulation, 638
- Parathyroid glands, 639
- Development of the parathyroid glands, 639
- Histology of the parathyroid glands, 639
- Signal transduction mediated by CaSR, 639
- Functions of the parathyroid hormone, 639

Dysfunction of the parathyroid glands, 641
 CaSR and Gq/11 mutations, 641
Box 19-B | Rickets and osteomalacia, 641
 C cells (thyroid follicle), 641
 Vitamin D (calcitriol), 641
 Adrenal (suprarenal) glands, 644
 Development of the adrenal gland, 644
 Functions of the fetal adrenal cortex, 644
 Histology of the adrenal cortex, 644
 Zona glomerulosa, 648
 Zona fasciculata, 648
 Zona reticularis, 650
 Dysfunction of the adrenal cortex, 650
Box 19-C | Congenital adrenal hyperplasia, 650
 Adrenal medulla, 650
 Blood supply to the adrenal gland, 653
Box 19-D | Bone morphogenic proteins determine the sympathoadrenal fate of neural crest cells.
Pheochromocytoma, 653
 Endocrine pancreas, 653
 Development of the pancreas, 653
 Islets of Langerhans, 653
 Peptides produced by cells of the islets of Langerhans, 656
 Cell entry and fate of insulin, 656
 Cell entry and fate of glucose, 656
 Diabetes mellitus, 658
Box 19-E | Incretins and insulin secretion, 659
 **Concept Mapping | Endocrine System**, 660
Essential Concepts | Endocrine System, 660

ORGAN SYSTEMS | THE REPRODUCTIVE SYSTEM

Chapter 20 | SPERMATOGENESIS

The testes, 664
 Seminiferous epithelium, 664
 Basal and adluminal compartments, 666
 The spermatogenic cell progeny, 666
Primer 20-A | The spermatogenic cell progeny, 667
 Sertoli cells, 670
Box 20-A | Androgens and spermatogenesis, 671
 Spermatogonia, 671
 Regulation of spermatogonia cell function, 671
Box 20-B | Sertoli cell-only syndrome (SCOS), 672
 Spermatocytes, 673
 Meiosis, 673
Primer 20-B | Meiosis I: Prophase I (from leptotene to pachytene), 675
Primer 20-C | Meiosis I: Prophase I (from diplotene to diakinesis), 676
Primer 20-D | Molecular structure of the synaptonemal complex, 677
 Spermatids, 678
Box 20-C | Acroplaxome, 678
 Shaping spermatids into fertilizing sperm, 681
Primer 20-E | Manchette and acroplaxome, 682
Box 20-D | Intramanchette transport (IMT), 683
 Completion of spermiogenesis, 683
 Structure of the sperm, 683
 Conditions affecting male fertility, 684
 Temperature, 684
Box 20-E | Semen analysis, 685
 Cryptorchidism, 685
 Inguinal hernia, cysts and hydrocele, 685
 Cancer chemotherapy, 685
 Viral orchitis, 685
 Spermatic cord torsion, 686
 Varicocele, 686

Leydig cells, 687
 Steroidogenic acute regulatory protein (StAR), 687
 Bioregulation of spermatogenesis, 688
Box 20-F | Actions of testosterone in the male reproductive system, 688
 The spermatogenic cycle, 688
 Epigenetics reprogramming, 692
 Testicular tumors, 694
 **Essential Concepts | Spermatogenesis**, 696
Concept Mapping | Spermatogenesis, 697

Chapter 21 | SPERM TRANSPORT AND MATURATION

Development of the gonads, 702
 Development of the testes, 702
Primer 21-A | Migration of primordial germinal cells from the yolk sac to the gonadal ridges, 703
 Development of internal genitalia, 704
Box 21-A | Development of internal genitalia, 704
 Testicular descent, 704
 Androgen insensitivity syndrome (AIS), 704
 Steroid 5 α -reductase 2 deficiency, 705
 Sperm maturation pathway, 705
 The epididymal ducts, 707
Box 21-B | Epididymal duct, 710
 Vas deferens, spermatic cord and ejaculatory duct, 710
 The azoospermia factor (AZF), 710
 Accessory genital glands, 710
 Seminal vesicles, 710
Box 21-C | Klinefelter's syndrome, 711
 Prostate gland, 711
Box 21-D | Seminal fluid (semen), 712
 Benign prostatic hyperplasia, 712
 The androgen receptor, 715
 Prostate cancer and tumor suppressor genes, 716
 Male and female urethra, 717
 Penis, 718
Box 21-E | Erectile dysfunction, 719
 Bulbourethral glands, 719
 **Concept Mapping | Sperm Transport and Maturation**, 720
Essential Concepts | Sperm Transport and Maturation, 720

Chapter 22 | FOLLICULOGENESIS AND MENSTRUAL CYCLE

Development of the female reproductive tract, 724
 Development of the ovary, 724
 Development of the female genital ducts, 724
Box 22-A | Turner's syndrome, 724
Box 22-B | Müllerian duct development. The role of anti-müllerian hormone in folliculogenesis, 724
Primer 22-A | From the indifferent gonad to the ovary and testis, 725
 Development of the external genitalia, 726
 The ovaries, 726
Box 22-C | Lgr5+ stem cells in the ovarian surface epithelium, 726
 The ovarian cycle, 726
 Granulosa cell-primary oocyte interaction, 729
Primer 22-B | Granulosa cell-primary oocyte interaction, 730
Box 22-D | Polycystic ovary syndrome, 731
Box 22-E | Ovarian hormones, 731
 Theca interna cell-granulosa cell interaction, 731
 Follicular atresia or degeneration, 731
 Ovulatory phase, 732
Box 22-F | Follicular atresia, 733
 Luteal phase: Luteinization and luteolysis, 733
 Hormonal regulation of the menstrual cycle, 736
 Oviduct, fallopian or uterine tube, 737

- The uterus, 737
- Box 22-G | Decidualization, 743
- Hypogonadotropic hypogonadism and GnRH, 744
- Endometriosis, 744
- Cervix and vagina, 745
- Cervical cancer and high-risk human papillomavirus infection, 745
- Diagnostic cytopathology, 748
- Mons pubis, labia majora and labia minora, 748
- Female urethra and glands (paraurethral glands and Bartholin's glands), 749
- Box 22-H | Krause corpuscles and sexual behavior, 749
-  Concept Mapping | Folliculogenesis and Menstrual Cycle, 750
- Essential Concepts | Folliculogenesis and Menstrual Cycle, 750

Chapter 23 | FERTILIZATION, PLACENTATION AND LACTATION

- Fertilization, 756
- Sperm capacitation, 756
- Acrosome reaction and sperm-egg fusion, 756
- Box 23-A | Tetraspanins, 757
- Box 23-B | Oocyte activation, 757
- Conditions leading to fertilization, 759
- Box 23-C | Fertilization in vitro, 759
- Implantation of the blastocyst, 760
- Box 23-D | Timetable of implantation, 760
- Differentiation of the trophoblast, 760
- Immunoprotective decidua during implantation, 761
- Primary, secondary and tertiary villi, 762
- Box 23-E | Trophoblast cells, 763
- Structure of the placenta, 763
- Decidua basalis and chorion, 763
- Placental blood circulation, 764

- Structure of the chorionic villus, 765
- Functions of the placenta, 767
- Exchange of gases, 767
- Transfer of maternal immunoglobulins, 769
- Rh (D antigen) isoimmunization, 769
- The fetoplacental unit, 769
- The luteal-placental shift, 769
- Active transport of ions and glucose, 769
- Fetal alcohol syndrome, 769
- Infectious agents, 770
- Placenta and fetal tissues and the maternal immune system, 770
- Abnormal placentation, 770
- Box 23-F | Ectopic pregnancy, 771
- Box 23-G | Hydramnios, 771
- Gestational trophoblastic diseases, 771
- Box 23-H | Placenta previa, 772
- Lactation, 773
- The mammary glands, 773
- Morphogenesis of the mammary glands, 773
- Mammary gland development, 774
- Mammary glands during puberty and pregnancy, 775
- Histology of the mammary glands, 776
- Suckling during lactation, 776
- Mammary cell lineages and the branched epithelial ductal tree, 776
- Primer 23-A | Distinct cell lineages form the branched epithelial ductal tree of the mammary glands, 779
- Box 23-I | Lactation, 780
- Benign breast diseases and breast cancer, 781
-  Concept Mapping | Fertilization, Placentation and Lactation, 783
- Essential Concepts | Fertilization, Placentation and Lactation, 783

INDEX, 787
