<i>Preface</i>	ix	<b>3 Alvin Virgil Tollestrup</b>	<b>35</b>
<b>1 The Road to Quarks</b>	<b>1</b>	3.1 Caltech	36
1.1 Prologue	2	3.2 The Fermilab Years	38
1.2 Radioactivity	2	3.3 Life Is on the Wire	39
1.3 Rutherford and His Group	3	<b>4 Richard Phillips Feynman</b>	<b>40</b>
1.4 Nuclei Before Neutrons	6	4.1 Prologue	41
1.5 Neutrons	6	4.2 Before Meeting Feynman: Parity Violation	41
1.6 Heisenberg's Nuclear Physics	7	4.3 First Impressions	44
1.7 Quantum Mechanics	9	4.4 Quantum Gravity	47
1.8 Classical Fields	11	4.5 Physics with Feynman	49
1.9 Quantum Fields	11	4.6 Feynman and Aces	51
1.10 Looking Ahead	13	4.7 What Constitutes the Craft of Theory?	52
<b>2 The Discovery of Quarks</b>	<b>14</b>	4.8 Dirac's Visit	53
2.1 Strangeness	15	4.9 A Difficult Period	54
2.2 The Elementary Particles in 1957	16	4.10 Recovery	55
2.3 Why So Many Hadrons?	17	4.11 Feynman's Character	57
2.4 Personal History	20	4.12 His Influence on Others	58
2.5 Fundamental Physics	22	4.13 Support	60
2.6 An Overlooked Anomaly	23	4.14 Diversions	61
2.7 Constituents	23	4.15 A Dark Side	62
2.8 The Mesons	24	4.16 Towards the End	64
2.9 The Baryons	25	4.17 Final Thoughts	64
2.10 Mass Relations	25	4.18 Epilogue	65
2.11 An Analogy	26	<b>5 Murray Gell-Mann</b>	<b>66</b>
2.12 The Reaction	27	5.1 Prologue	67
2.13 Invention or Discovery?	29	5.2 An Early Beacon	67
2.A Anomalies	30	5.3 Murray's Toy Field Theories	68
2.B Hadrons and Their Halos	31	5.4 The Eightfold Way	68
2.C The First Pion-Nucleon Resonance	32		
2.D Ace Charges and Baryon Numbers	33		

5.5	Mathematical Quarks for a Toy		7.3	Asking the Right Question	129
	Field Theory	70	7.4	The Medium Was the Message	129
5.6	Later Years	72	7.5	When the Dust Settled	130
5.7	Mr. Physics	73	7.6	Are Regularities Still Relevant?	132
5.8	A Dark Side	73	7.7	Tetra and Pentaquarks	132
5.9	Comparing Feynman with Gell-Mann	81	7.8	The Quark-Gluon Plasma	133
5.A	Gell-Mann's 1961-62 Publications	83	7.9	Free Fractionally Charged Particles?	134
5.B	Serber's Letter	83	7.10	The Standard Model	134
<b>6</b>	<b>A Deeper Layer of Reality</b>	<b>87</b>	7.11	Lessons Learned	136
6.1	Prologue	88	7.12	Remaining Questions	138
6.2	Physics Before Quarks: a Précis	88	7.13	What About the Other Stuff?	138
6.3	Down the Rabbit Hole	92	7.A	Bumps Along the Way	139
6.4	The Deeper Layer	94	7.B	Moving in the Right Direction	140
6.5	Hadrons from Aces with Spin	96	7.C	Discovering the Fourth Quark	142
6.6	Zweig's Rule for Masses	98	<b>A</b>	<b>A Primer on Quarks</b>	<b>146</b>
6.7	Zweig's Rule for Couplings	101	A.1	Prologue	146
6.8	Weak-Interaction Predictions	102	A.2	Forces	146
6.9	How to Look for Aces	103	A.3	Quarks	148
6.10	A Fortuitous Accident	104	A.4	Quantum Numbers	148
6.11	Difficulties	105	A.5	Addition of Isospin, Spin, or Angular Momentum	149
6.12	Were Aces Real?	106	A.6	Symmetry and Quantum Numbers	151
6.13	Conclusion of the CERN Reports	107	A.7	Orbital and Vibrational Excitations	152
6.14	Thinking Graphically	107	A.8	The Limits of Conservation	152
6.15	Politics Turned Personal	110	A.9	Reverse Engineering Quarks	153
6.16	Heisenberg's Resistance	111	<b>B</b>	<b>The First CERN Report</b>	<b>154</b>
6.17	Leaving Physics	113		<i>Glossary: A Guide for the Perplexed</i>	179
6.18	Looking Back	115		<i>Acknowledgments</i>	190
6.A	Hierarchies of Representations	116		<i>Further Reading</i>	191
6.B	Evaluating Theories	118		<i>Bibliography</i>	192
6.C	Graphical Calculus	119		<i>Index</i>	198
<b>7</b>	<b>Epilogue</b>	<b>125</b>			
7.1	Recapitulation	126			
7.2	When the Fog Lifted	127
