

Contents

Chapter 1 Cellular Organization: Prokaryotes and Eukaryotes 3

Historical Background	4
Microscopy and the Cell Theory	4
Genetic and Biochemical Aspects of the Cell	7
Cell Structural Organizations	9
Prokaryotic Cell Organization	9
Eukaryotic Cell Organization	11
Evolutionary Relationships	21
Viruses	23
Summary	24
Study Questions	26
Suggested Readings	26

Chapter 2 Cellular Chemistry: Organic Molecules 28

Chemical Bonds	28
Covalent Bonds	29
Weak Chemical Bonds	29
Water	31
Properties of Water	31
The pH Scale	32
The Chemistry of Carbon Atoms	33
Carbon Atom Interactions	33
Isomers	34
Biologically Important Carbon Compounds	35
Carbohydrates	35
Monosaccharides	36

Polysaccharides	37		
Lipids	39		
Fatty Acids	40		
Neutral Fats (Glycerides)	40		
Phospholipids	42		
Sphingolipids and Glycolipids	42		
Steroids and Terpenes	43		
Proteins	45		
Amino Acids	45		
Polypeptides	48		
Protein Structure	48		
Nucleotides and Nucleic Acids	51		
The DNA Double Helix	55		
Summary	56		
Study Questions	57		
Suggested Readings	57		
Chapter 3 Cellular Metabolism: Energy and Enzymes	59		
Cellular Energetics	59		
Measurement of Free Energy	60		
Open Systems and Steady States	62		
Coupled Metabolic Reactions	62		
The Role of ATP in Energy Transfer	62		
Oxidation-Reductions in Energy Transfer	65		
The Role of NAD ⁺ /NADH in Energy Transfer	66		
Enzymes: Catalysts of Life	67		
Enzyme Activity	68		
Substrate Specificity	69		
Self-Regulation	72		
Genetic Regulation of Enzyme Synthesis	74		
Glucose Breakdown by Glycolysis	76		
The Sequence of Reactions	77		
Regulation of the Rate of Glycolysis	80		
Summary	81		
Study Questions	82		
Suggested Readings	83		
Chapter 4 Cellular Membranes: Dynamic Barriers	84		
Structural Models	84		
Danielli and Davson Model	85		
The Robertson Unit Membrane Model	85		
The Fluid Mosaic Model	87		
Movement of Substances Across Membranes	90		
Free Diffusion	91		
Transport Mechanisms	93		
Transport by Vesicle Formation	97		
Intercellular Communication Through Junctions	98		
Ion and Metabolite Exchange	100		
Intercellular Adhesion	105		
Cells and Cell Systems	106		
Summary	106		
Study Questions	108		
Suggested Readings	108		
Chapter 5 Cellular Energy Transformations: Mitochondria and Chloroplasts	110		
Aerobic Respiration	111		
The Krebs Cycle	114		
The Electron Transport Chain	116		
Oxidative Phosphorylation	118		
Coupling Mechanisms	119		
Overall Energetics of Glucose Oxidation	123		
Form and Structure of the Mitochondrion	124		
Inner Membrane Subunits	125		
Size, Shape, and Number	129		
Chloroplasts	130		
Structure of Eukaryote Chloroplasts	131		
Thylakoids in Prokaryotes	132		
Photosynthetic Pigments	133		
Overall Reactions in Photosynthesis	135		
Photoexcitation of Molecules	139		
Separability of Light and Dark Reactions	140		
The Light Reactions of Photosynthesis	141		
Photosystems I and II	141		
Electron Flow in Chloroplasts	142		
Photophosphorylation	144		
The Dark Reactions of Photosynthesis	145		
Fixation of Carbon Dioxide	146		
The Hatch-Slack Cycle	148		
Biogenesis of Chloroplasts and Mitochondria	150		
Chloroplasts and Proplastids	150		
Mitochondrial Biogenesis	152		
Summary	154		
Study Questions	156		
Suggested Readings	158		

Chapter 6 Cellular Packaging: The ER and Its Derivatives 159

The Endoplasmic Reticulum	160
The Golgi Apparatus	162
Ultrastructural Organization	162
Functions of the Golgi Apparatus	166
Cell Secretion	167
Lysosomes	172
Formation and Function	172
Lysosomes and Disease	175
Microbodies	177
Occurrence and Identification	178
Coordination Among Organelles	181
Membrane Transformations	182
Summary	184
Study Questions	186
Suggested Readings	186

Chapter 7 Cellular Movements: Microtubules and Microfilaments 188

Muscle Fibers	189
Myofibril Ultrastructure and Chemistry	191
Coupled Excitation and Contraction	195
Troponin and Tropomyosin: Regulatory Proteins	197
Centrioles	198
Centriole Formation	198
Centriolar Functions	199
Cilia and Flagella	203
Structure and Chemistry	204
Ciliary Movement: Sliding Microtubule Mechanism	205
Modified Cilia and Flagella	207
Bacterial Flagella	208
The Mitotic Apparatus	209
Structure	209
Spindle Function	210
Anaphase Movement of Chromosomes	211
Microfilaments and Nonmuscle Movements	212
Movements of Protoplasm	214
Displacement of Cells	215
Summary	219
Study Questions	220
Suggested Readings	221

Chapter 8 Cellular Genetics: DNA, RNA, Protein 222

DNA: The Genetic Material	222
The Double Helix	225
Semiconservative Replication	226
Information Storage and Flow	229
The Genetic Code	230
Co-linearity of Gene and Protein	231
Regulation of Gene Expression	233
The Operon Concept	233
Operators and Promoters	235
Ribosomes and Protein Synthesis	236
Ribosomes	236
Polysomes	238
Amino Acids and Transfer RNA	240
Polypeptide Chain Elongation	242
Polypeptide Chain Initiation	246
Polypeptide Chain Termination	248
Overall View	249
Summary	249
Study Questions	251
Suggested Readings	252

Chapter 9 Cell Control Center: The Nucleus 254

Nuclear Organization	254
The Nuclear Envelope	255
Nuclear Pore Complexes	255
The Nucleolus	257
Chromosomes	262
Chemistry and Structure of the Chromatin Fiber	262
Number of Chromatin Fibers Per Chromosome	267
The Centromere	269
Heterochromatin and Euchromatin	271
Chromosome Banding	274
Repetitious DNA	275
Polytene Chromosomes	277
Puffing and Gene Expression	278
Regulation of Puffing	280
Summary	281
Study Questions	282
Suggested Readings	283

Chapter 10 Cellular Reproduction:

Mitosis and Meiosis	284
The Cell Cycle	286
Variations in Cell Cycle Phases	287
Replication of DNA	288
Mitosis	290
Stages of Mitosis	292
Consequences of Mitosis	293
Modifications of Mitosis	293
Cytokinesis	295
Meiosis	296
The Two Divisions of Meiosis	297
Meiosis as a Source of Variability	305
Crossing Over	306
Summary	310
Study Questions	310
Suggested Readings	311
Chapter 11 Cell Biology in Medicine	312
Human Chromosome Studies	312
The Human Chromosome Complement	313
Sex Chromosome Anomalies	313
Autosomal Anomalies	318
Prenatal Diagnosis	319
Amniocentesis	320
Detection of Chromosome Damage	322
Genetic Counseling	324
Cell Surface Studies	325
Organization of the Cell Surface	325

The Cytoskeletal Framework	326
The Immune Systems	326
T Cells and B Cells	328
Interferon	331
The Cancer Cell: Cell-Surface Modifications	334
Summary	336
Study Questions	337
Suggested Readings	338

Chapter 12 Cellular Evolution:

From Chemicals to Life	339
Origin of Life	339
Abiogenic Synthesis	340
Coacervates and Proteinoid Microspheres	341
The First Life Forms	342
Modifications in Nutrition	343
Eukaryotes from Prokaryotes	346
Origin of the Eukaryotic Cell	346
Endosymbiosis	347
Internalized Membrane Differentiation	349
Different Origins for Chloroplasts and Mitochondria?	350
Summary	351
Study Questions	352
Suggested Readings	352
Glossary	353
Index	363
Abbreviations Used in Text (endpaper)
