|--------------------------------------------------------------------------------------------|------|
| Foreword .....                                                                             | xi   |
| Preliminary Words.....                                                                     | xii  |
| Acknowledgements .....                                                                     | xiii |
| <br>                                                                                       |      |
| <b>Chapter 1</b> Introduction to Concepts from Optics towards Nano-Optics .....            | 1    |
| 1.1    Basis of Advanced Optics and Nano-Optics .....                                      | 1    |
| 1.2    Concepts of Nano-Optics .....                                                       | 4    |
| 1.3    Developments in Nano-Optics for Targeted Applications.....                          | 9    |
| 1.4    Concluding Remarks .....                                                            | 12   |
| Conflict of Interests .....                                                                | 13   |
| References .....                                                                           | 13   |
| <br>                                                                                       |      |
| <b>Chapter 2</b> Development of Nanochemistry for Optics.....                              | 16   |
| 2.1    Introduction .....                                                                  | 16   |
| 2.2    Control of the Nanoscale by Chemical Synthesis and<br>Applications.....             | 17   |
| 2.3    Wet Chemistry.....                                                                  | 25   |
| 2.3.1    Wet Chemistry: From Reactions to Protocols and<br>Methods.....                    | 26   |
| 2.3.2    Advanced Organic Chemistry for Covalent<br>Linking .....                          | 27   |
| 2.3.3    Polymeric Reactions for Chemical Surface<br>Modifications.....                    | 28   |
| 2.4    Advanced Techniques for Metallic and Molecular<br>Depositions .....                 | 31   |
| 2.5    Laser-Assisted Techniques and Methods for<br>Nanolithography .....                  | 32   |
| 2.6    Concluding Remarks .....                                                            | 34   |
| Conflict of Interests .....                                                                | 37   |
| References .....                                                                           | 37   |
| <br>                                                                                       |      |
| <b>Chapter 3</b> Physical, Chemical, and Related Phenomena to Develop<br>Nano-Optics ..... | 46   |
| 3.1    Introduction .....                                                                  | 46   |
| 3.2    Absorption of Light .....                                                           | 48   |
| 3.3    Light Scattering .....                                                              | 50   |
| 3.4    Fluorescence and Luminescence Phenomena .....                                       | 51   |
| 3.5    Chemiluminescence and Electrochemiluminescence .....                                | 52   |
| 3.6    Bioluminescence, Non-Classical Bio-Light, and<br>Synthetic Pathways .....           | 54   |

|                  |                                                                                   |            |
|------------------|-----------------------------------------------------------------------------------|------------|
| 3.7              | Phosphorescence.....                                                              | 55         |
| 3.8              | Quantum Properties: Quantum Emissions and Further Optical Quantum Properties..... | 56         |
| 3.9              | X-Rays .....                                                                      | 57         |
| 3.10             | Concluding Remarks .....                                                          | 59         |
|                  | Conflict of Interests .....                                                       | 60         |
|                  | References .....                                                                  | 60         |
| <b>Chapter 4</b> | <b>Tuning Nano-Optics at the Molecular Level.....</b>                             | <b>69</b>  |
| 4.1              | Introduction .....                                                                | 69         |
| 4.2              | Non-Classical Light Nano-Optics .....                                             | 70         |
| 4.3              | Light Scattering Nano-Optics .....                                                | 73         |
| 4.4              | Development of Nano-Optoelectronics .....                                         | 76         |
| 4.5              | Quantum Nano-Optics .....                                                         | 78         |
| 4.6              | Discussion and Future Perspectives .....                                          | 82         |
|                  | Conflict of Interests .....                                                       | 84         |
|                  | References .....                                                                  | 84         |
| <b>Chapter 5</b> | <b>Concepts of Enhanced Optical Phenomena Based on Nanochemistry .....</b>        | <b>90</b>  |
| 5.1              | Introduction .....                                                                | 90         |
| 5.2              | Enhanced Light Scattering Nanoplatfroms.....                                      | 91         |
| 5.3              | Nanohole Particles.....                                                           | 94         |
| 5.4              | Insights of Laser Light Scattering Materials and Approaches .....                 | 96         |
| 5.5              | Concluding Remarks .....                                                          | 100        |
|                  | Conflict of Interests .....                                                       | 100        |
|                  | References .....                                                                  | 100        |
| <b>Chapter 6</b> | <b>Prototyping Functional Optically Active Nanomaterials.....</b>                 | <b>105</b> |
| 6.1              | Introduction .....                                                                | 105        |
| 6.2              | Design of Optical Nanoplatfroms.....                                              | 106        |
| 6.3              | Design of Functional Molecules, Nano-, and Micromaterials .....                   | 113        |
| 6.4              | Design of Multifunctional Optical Materials .....                                 | 116        |
| 6.5              | Concluding Remarks .....                                                          | 121        |
|                  | Conflict of Interests .....                                                       | 121        |
|                  | References .....                                                                  | 121        |
| <b>Chapter 7</b> | <b>Laser Dyes, Nanolasers, and Quantum Lasers.....</b>                            | <b>132</b> |
| 7.1              | Introduction to Enhanced Laser Dyes.....                                          | 132        |
| 7.2              | Nanolasers .....                                                                  | 132        |

|                   |                                                                                             |            |
|-------------------|---------------------------------------------------------------------------------------------|------------|
| 7.3               | Quantum Lasers .....                                                                        | 136        |
| 7.4               | Conclusions and Future Perspectives .....                                                   | 138        |
|                   | Conflict of Interests .....                                                                 | 144        |
|                   | References .....                                                                            | 144        |
| <b>Chapter 8</b>  | <b>Development of Nano-Bio-Optics.....</b>                                                  | <b>148</b> |
| 8.1               | Introduction to Bio-Optics, Nano-Bio-Optics, and Applications.....                          | 148        |
| 8.2               | Control of Nanoscale Matter for Virus, Bacteria, and Unicellular Optics Detection .....     | 150        |
| 8.2.1             | Nano-Optics for Bio-Optics .....                                                            | 150        |
| 8.2.2             | Bio-Optics and Nano-Bio-Optics Highlighting Bioassays and Applications .....                | 152        |
| 8.2.3             | Further Analysis and Biodetection of SARS CoV-2 and New Insights for Nano-Biotechnology ... | 158        |
| 8.3               | Discussion and Future Perspectives .....                                                    | 161        |
| 8.4               | Conclusions.....                                                                            | 162        |
|                   | Conflict of Interests .....                                                                 | 162        |
|                   | References .....                                                                            | 162        |
| <b>Chapter 9</b>  | <b>Optically Active Hybrid Micromachines and Microswimmers.....</b>                         | <b>172</b> |
| 9.1               | Introduction .....                                                                          | 172        |
| 9.2               | Generation of Bioimaging towards Design of Hybrid Micromachines and Microswimmers.....      | 173        |
| 9.2.1             | Nanobiolabelling .....                                                                      | 173        |
| 9.2.2             | Enhanced Bioimaging .....                                                                   | 174        |
| 9.3               | In-Flow Detection and Single Biostructure Analysis.....                                     | 177        |
| 9.4               | Design of Nano-Biomachines and Micromachines for Targeted Applications.....                 | 178        |
| 9.5               | Discussion and Future Perspectives .....                                                    | 181        |
| 9.6               | Conclusions and Highlights.....                                                             | 183        |
|                   | Conflict of Interests .....                                                                 | 183        |
|                   | References .....                                                                            | 183        |
| <b>Chapter 10</b> | <b>Nano-Biolasers, Biolasers, and Living Lasers .....</b>                                   | <b>189</b> |
| 10.1              | Introduction to Bio-Optics and Amplified Emissions.....                                     | 189        |
| 10.2              | Insights of Living Lasers and Biolasers .....                                               | 190        |
| 10.3              | Synthetic Nano-Biolasers .....                                                              | 192        |
| 10.4              | Conclusions and Future Perspectives .....                                                   | 197        |
|                   | Conflict of Interests .....                                                                 | 198        |
|                   | References .....                                                                            | 198        |

|                   |                                                                                                                 |     |
|-------------------|-----------------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 11</b> | Development of Nanodevices and Microdevices for Varied Applications.....                                        | 201 |
| 11.1              | Introduction .....                                                                                              | 201 |
| 11.2              | Design of Nano-Optical Platforms for Nanodevices.....                                                           | 202 |
| 11.3              | Further Developments towards Functional Material and Technology Related to Chips and Microfluidic Devices ..... | 206 |
| 11.4              | Current Developments and Future Perspectives Focused on Nanotechnology .....                                    | 211 |
| 11.5              | Nano- and Microtechnology Focused on Lab-On-A-Particle and Advances in Biosensing.....                          | 214 |
| 11.5.1            | Lab-On-A-Particle.....                                                                                          | 214 |
| 11.5.2            | New Advances and Early Diagnosis by Lab-On-A-Particle Platforms .....                                           | 217 |
| 11.5.3            | Chips and Miniaturized Instrumentation.....                                                                     | 219 |
| 11.6              | Conclusions and Future Perspectives .....                                                                       | 221 |
|                   | References .....                                                                                                | 223 |

|                   |                                                                                                                                                                          |     |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 12</b> | Discussion and Future Perspectives from Nano-Optics to Optics, and Applications .....                                                                                    | 232 |
| 12.1              | Why Nano-Optics? .....                                                                                                                                                   | 232 |
| 12.1.1            | Nanochemistry and Nanophysics .....                                                                                                                                      | 234 |
| 12.1.2            | Nanophotonics and Quantum Photonics .....                                                                                                                                | 235 |
| 12.1.3            | Semiconductor Nanomaterials .....                                                                                                                                        | 237 |
| 12.2              | Technology Perspectives .....                                                                                                                                            | 238 |
| 12.2.1            | Macroscale and Higher-Sized Approaches and/or Instrumentation: Conductors, Light, Energy, Communications, Microscopy, Miniaturized Devices, and Miniaturized Optics..... | 238 |
| 12.2.2            | Nanotechnology and Microtechnology: Microelectronics, Microdevices, Optical Fibres, Cell Phones, Chips, and Next-Generation Sequencing (NGS).....                        | 239 |
| 12.2.3            | Nanotools Made of Light, Optical Components, Lenses, and Set-Ups: Nanotechnology Focusing on Non-Classical Light.....                                                    | 243 |
| 12.2.4            | Life Sciences: Nanotechnology Focusing on Non-Classical Light, Nanolabellers and Nanobeads, Cargo-Loaded Nanoemitters, and Immunology .....                              | 245 |
| 12.2.5            | Multifunctional Nanoplatforms and Next-Generation Sequencing (NGS).....                                                                                                  | 246 |
| 12.3              | Concluding Remarks .....                                                                                                                                                 | 251 |
|                   | References .....                                                                                                                                                         | 252 |
