About the Author	ix
Preface	xi
<b>Chapter 1 Green Engineering</b>	<b>1</b>
1.1. Green Engineering	1
1.2. Challenges in Adopting Green	2
1.3. Economic Assessment and Market Strategic Choices	4
1.4. Green Development	5
1.5. Green Products and Processes	7
1.6. Green Management	9
1.7. Sustainability	12
1.8. Sustainability Elements	13
1.9. Sustainability Principles	15
1.10. Sustainability Challenges	16
1.11. Sustainable Development	18
1.12. The Concept of Sustainable Development: The Need for an Integrated Approach	20
1.13. Increased Interrelation Between Environment and Industrial Policies	23
1.14. The Role of Business and Industry for Achieving Sustainable Development	26
1.15. Environmental Compliances and Green Manufacturing Drivers for Sustainable Development	28
1.16. The New Challenges – Globalization, Information Society, and the Change of Production and Consumption Pattern	30
<b>Chapter 2 Inclusive and Sustainable Industrial Development</b>	<b>35</b>
2.1. Sustainable Industrial Development	39
2.2. Instruments for Implementing Sustainable Industrial Development	41

2.3. Measures and Activities in the Field of Industrial Policy with Other Policy Areas	43
2.4. Indicators for Monitoring Progress with the Implementation of Sustainable Industrial Development	45
2.5. Cross-cutting Issues in Sustainable Industrial Development: A Tangled Web	49
2.6. Achieving ISID: A Roadmap to Success	51
2.7. Competitiveness, Upgrading, and Modernization in Sustainable Industrial Development	53
2.8. Unveiling Environmental Sustainability: The Core of a Thriving Future	55
<b>Chapter 3 Sustainable Manufacturing</b>	63
3.1. Sustainable Manufacturing	63
3.2. SM Tools	65
3.3. SM Approaches	67
3.4. Elements of SM	71
3.5. SM Principles: A Deep Dive	73
3.6. Challenges in Achieving SM	75
3.7. Practices for SM	78
3.8. Environmental Compliances and Green Manufacturing Drivers for SM	81
3.9. Benefits of SM	84
3.10. SM: Shaping a Greener Tomorrow	86
<b>Chapter 4 Benchmarking and Just in Time</b>	93
4.1. Benchmarking	93
4.2. Need for Benchmarking	96
4.3. Objectives for Benchmarking	97
4.4. Types of Benchmarking	98
4.5. Benchmarking Methodology	101
4.6. Gap Analysis in Benchmarking	122
4.7. Benchmarking Approaches for Functional Excellence	123
4.8. Methods for Successful Implementation of a Benchmarking Programme: A Detailed Look	124
4.9. Benefits and Limitations of Benchmarking: A Comprehensive Look	127
4.10. JIT: Inventory Management	128
4.11. Elements of JIT	130
4.12. The Necessity of JIT Inventory Management: A Closer Look	131

4.13. Kanban System: A Visual Inventory Control System JIT	132
4.14. Requirements of JIT	137
4.15. Benefits and Limitations of JIT	138
4.16. Kaizen	139
4.17. Total Quality Control	141

## **Chapter 5 Maintenance Management and Sustainable Industrial Development**

5.1. Maintenance Management and Sustainable Industrial Development: A Powerful Duo	145
5.2. Total Productive Maintenance	147
5.3. Planned Maintenance and Reactive Maintenance	152
5.4. Condition-based Maintenance and Condition Monitoring	159
5.5. Computerized Maintenance Management System	179
5.6. Environmental Footprints of Maintenance	186
5.7. Residual Life Prediction Techniques	188
5.8. Maintenance for Sustainable Production	197
5.9. Maintenance Technologies	199
5.10. Elements of Sustainable Maintenance	202

## **Chapter 6 Factories of the Future and Sustainable Industrial Development**

6.1. Factory of the Future	207
6.2. Driving Technologies and Market Readiness	209
6.3. Current Manufacturing Environment	213
6.4. Enabling Mechanisms Towards Green Engineering	214
6.5. Redesigning Manufacturing Processes for the FoFs	217
6.6. Waste Reduction Techniques (5Rs)	218
6.7. Industry 6.0	220
6.8. Machine Learning	230
6.9. Digital Manufacturing	236
6.10. Intelligent Machining	242
6.11. Internet of Things	253
6.12. Fog Computing	258
6.13. Artificial Intelligence	259

## **Chapter 7 Automation in Sustainable Industrial Development**

7.1. Computer Integrated Production Management System	267
7.2. Key Elements of the CIPMS and Their Roles	271

7.3. Potential Benefits of Implementing the CIPMS	274
7.4. Facilities Requirements for a Green CIPMS	275
7.5. Sustainable Strategies for Computer-integrated Production	276
7.6. Integration of CAD/CAPP/CAM Systems	279
7.7. Green Production Management Programmes	281
7.8. Rapid Prototyping: A Comprehensive Overview	283

## **Chapter 8 Technological Advancements in Sustainable Industrial Development** 295

8.1. Advanced Manufacturing Technologies (AMTs)	295
8.2. Lean Manufacturing	303
8.3. Value Stream Mapping	306
8.4. Agile Manufacturing: A Dynamic Approach to Modern Production	310
8.5. Remanufacturing and Recycling: Key Drivers of Sustainability	314
8.6. BPR for Sustainable Industrial Development	317
8.7. Product Life Cycle Management	321
8.8. From 5S to 7S: A Comprehensive Approach to Achieving Operational Excellence and Sustainability	325
8.9. AM: A Catalyst for Sustainable Industrial Progress	328
8.10. Reverse Engineering: A Catalyst for Sustainable Industrial Advancement	331
8.11. TQM: A Pathway to Sustainable Industrial Excellence	334

## **Chapter 9 Perspectives of Sustainable Industrial Development** 339

9.1. Social Implications	339
9.2. Implications of Green Engineering on Economy	340
9.3. Environmental Risk Management	342
9.4. Perspectives of Environmental Issues in Industries	343
9.5. Remedies for Environment Issues	347

Index	351
