<i>Preface</i>	v
<i>List of Figures</i>	xi
Chapter 1. The Mathematical Structure of Quantum Mechanics	1
1.1 Vector Spaces and Inner Products	1
1.2 Linear Operators	7
1.3 Self-Adjoint Operators, Eigenvalues and Eigenvectors . . .	11
1.4 Dirac Notation	16
1.5 Projection Operators and the Spectral Theorem	21
Problems	26
Chapter 2. Dynamics of a Quantum Particle	31
2.1 The Schrödinger Equation	31
2.2 The Interpretation of the Wave Function	35
2.3 The Free Particle	36
2.4 The Square Well	41
2.5 Some Additional Properties of the Square Well Directly from the Structure of the Schrödinger Equation	45
2.6 Probability Current and the Conservation of Probability	49
2.7 Expectation Values	51
2.8 Scattering and Tunneling	53
Problems	61

Chapter 3. Measurement, Time Evolution, Uncertainty, and the Harmonic Oscillator	67
3.1 Measurement	67
3.2 Unitary Operators, Time Evolution	74
3.3 Uncertainty Relations	81
3.4 The Harmonic Oscillator	85
Problems	91
Chapter 4. Quantum Mechanics of Angular Momentum	101
4.1 Angular Momentum: Classical to Quantum	101
4.2 Eigenvalues and Eigenvectors of Angular Momentum . . .	109
4.3 Examples of Matrix Representations for Angular Momentum	118
4.4 Orbital Angular Momentum	121
Problems	127
Chapter 5. Composite Systems, Tensor Products, and Entanglement	133
5.1 The Stern-Gerlach Experiment—Revisited	133
5.2 Four “Thought Experiments” on the Measurement of Spin	137
5.3 Composite Systems, Tensor Products, and Entanglement	143
5.4 Measurement: Observables as Tensor Product Operators on Tensor Product Spaces	151
5.5 Non-Locality and Bell Inequalities	153
5.6 Bell’s Experiment (The Clauser-Horne-Shimony-Holt (CHSH) Version)	157
Problems	161
Solutions to Problems	165
Chapter 1	165
Chapter 2	178
Chapter 3	192
Chapter 4	220
Chapter 5	238
<i>Bibliography</i>	249
<i>Index</i>	253
