Foreword	xiii
Preface.....	xv
Authors.....	xix
Major GIS Datasets and Program Files	xxi
Quick References for Spatial Analysis Tasks.....	xxiii

PART I GIS and Basic Spatial Analysis Tasks

Chapter 1	Getting Started with ArcGIS: Data Management and Basic Spatial Analysis Tools	3
1.1	Spatial and Attribute Data Management in ArcGIS	3
1.1.1	Map Projections and Spatial Data Models	4
1.1.2	Attribute Data Management and Attribute Join.....	5
1.2	Spatial Analysis Tools in ArcGIS: Queries, Spatial Joins, and Map Overlays.....	6
1.3	Case Study 1: Mapping and Analyzing Population Density Pattern in Baton Rouge, Louisiana.....	10
1.3.1	Mapping the Population Density Pattern.....	10
1.3.2	Analyzing the Population Density Pattern across Concentric Rings	15
1.4	Summary.....	21
	Appendix 1: Identifying Contiguous Polygons by Spatial Analysis Tools.	23
Chapter 2	Measuring Distance and Travel Time and Analyzing Distance Decay Behavior	27
2.1	Measures of Distance and Travel Time	28
2.2	Case Study 2A: Estimating Drive and Transit Times in Baton Rouge, Louisiana	31
2.2.1	Estimating a Euclidean or Geodesic Distance Matrix...	32
2.2.2	Estimating a Drive Time Matrix.....	35
2.2.3	Estimating a Transit Time Matrix.....	40
2.3	Estimating Distance Decay Functions.....	44
2.4	Case Study 2B: Analyzing Distance Decay Behavior for Hospitalization in Florida.....	48
2.4.1	Estimating Distance Decay Functions by the Spatial Interaction Model	48
2.4.2	Estimating Distance Decay Functions by the Complementary Cumulative Distribution Method.....	50

2.5	Summary.....	54
	Appendix 2A: The Valued Graph Approach to the Shortest- Route Problem.....	54
	Appendix 2B: Estimating Drive Time and Transit Time Matrices by Google Maps API.....	56
	Appendix 2C: Installing Geoprocessing Tools Based on R.....	60
Chapter 3	Spatial Smoothing and Spatial Interpolation.....	65
3.1	Spatial Smoothing	65
3.1.1	Floating Catchment Area (FCA) Method.....	66
3.1.2	Kernel Density Estimation (KDE) Method.....	67
3.2	Point-Based Spatial Interpolation.....	68
3.2.1	Global Interpolation Methods	68
3.2.2	Local Interpolation Methods	69
3.3	Case Study 3A: Mapping Place-Names in Guangxi, China	71
3.3.1	Implementing the Floating Catchment Area Method	72
3.3.2	Implementing Spatial Interpolation Methods.....	75
3.4	Area-Based Spatial Interpolation	76
3.5	Case Study 3B: Area-Based Interpolations of Population in Baton Rouge, Louisiana	78
3.5.1	Implementing Areal Weighting Interpolation.....	78
3.5.2	Implementing Target-Density Weighting Interpolation	79
3.6	Spatiotemporal Kernel Density Estimation (STKDE) Method.....	81
3.7	Case Study 3C: Detecting Spatiotemporal Crime Hotspots in Baton Rouge, Louisiana.....	83
3.8	Summary.....	89
	Appendix 3: Empirical Bayes Estimation for Spatial Smoothing.....	90

PART II Basic Computational Methods and Applications

Chapter 4	Delineating Functional Regions and Application in Health Geography	95
4.1	Basic Geographic Methods for Defining Functional Regions...	95
4.1.1	Proximal Area Method	96
4.1.2	Huff Model.....	97
4.2	Case Study 4A: Defining Service Areas of Acute Hospitals in Baton Rouge, Louisiana.....	100
4.2.1	Defining HSAs by the Proximal Area Method.....	101
4.2.2	Defining HSAs by the Huff Model.....	103
4.3	Refining the Dartmouth Method.....	106

4.4	Spatialized Network Community Detection Methods.....	108
4.5	Case Study 4B: Automated Delineation of Hospital Service Areas (HSAs) in Florida	112
4.5.1	Delineating HSAs by the Refined Dartmouth Method	112
4.5.2	Delineating HSAs by Integrating the Huff Model and Dartmouth Method	115
4.5.3	Delineating HSAs by Spatialized Network Community Detection Methods	117
4.6	Summary.....	119
	Appendix 4A: Economic Foundation of the Gravity Model.....	121
	Appendix 4B: Installing Geoprocessing Tools Based on Python.....	122
Chapter 5	GIS-Based Measures of Spatial Accessibility and Application in Examining Healthcare Disparity	127
5.1	Issues on Accessibility.....	127
5.2	Floating Catchment Area Methods.....	129
5.2.1	Earlier Versions of Floating Catchment Area (FCA) Method	129
5.2.2	Two-Step Floating Catchment Area (2SFCA) Method	130
5.3	From Gravity-Based to Generalized 2SFCA Method	132
5.3.1	Gravity-Based 2SFCA Method	132
5.3.2	Generalized 2SFCA Method	134
5.4	Inverted 2SFCA Method.....	136
5.5	Two-Step Virtual Catchment Area (2SVCA) Method	137
5.6	Case Study 5: Measuring Accessibility of Primary Care Physicians in Baton Rouge.....	138
5.6.1	Implementing the 2SFCA Method	139
5.6.2	Implementing the Gravity-Based 2SFCA Method...	143
5.6.3	Implementing the 2SVCA Method	144
5.7	Summary.....	147
	Appendix 5A: A Property of Accessibility Measures	148
	Appendix 5B: A Toolkit for Automated Spatial Accessibility and Virtual Accessibility Measures	150
	Appendix 5C: Deriving the 2SFCA and I2SFCA Methods.	153
Chapter 6	Function Fittings by Regressions and Application in Analyzing Urban Density Patterns.....	157
6.1	The Density Function Approach to Urban and Regional Structures.....	157
6.1.1	Urban Density Functions.....	157
6.1.2	Regional Density Functions	159
6.2	Function Fittings for Monocentric Models.....	160
6.3	Nonlinear and Weighted Regressions in Function Fittings ...	164

6.4	Function Fittings for Polycentric Models.....	166
6.5	Case Study 6: Analyzing Urban Density Patterns in Chicago Urban Area	169
6.5.1	Function Fittings for Monocentric Models at the Census Tract Level	169
6.5.2	Function Fittings for Polycentric Models at the Census Tract Level	174
6.5.3	Function Fittings for Monocentric Models at the Township Level	177
6.6	Discussion and Summary	178
	Appendix 6A: Deriving Urban Density Functions.....	179
	Appendix 6B: Centrality Measures and Association with Urban Densities	181
	Appendix 6C: OLS Regression for a Linear Bivariate Model	182
Chapter 7	Principal Components, Factor Analysis, and Cluster Analysis and Application in Social Area Analysis	185
7.1	Principal Components Analysis (PCA)	186
7.2	Factor Analysis (FA).....	187
7.3	Cluster Analysis (CA).....	191
7.4	Social Area Analysis.....	193
7.5	Case Study 7: Social Area Analysis in Beijing.....	195
7.6	Summary.....	205
	Appendix 7: Discriminant Function Analysis.....	206
Chapter 8	Spatial Statistics and Applications	209
8.1	The Centographic Measures.....	210
8.2	Inferential Measures of Point Distribution Patterns	212
8.2.1	Spatial Clustering Pattern of One Type of Points.....	212
8.2.2	Cluster Analysis of Case-Control Points	214
8.3	Case Study 8A: Spatial Distribution and Clusters of Place-Names in Yunnan, China.....	215
8.3.1	Analysis of Multiethnic Place-Names by Centographic Measures.....	216
8.3.2	Cluster Analysis of Multiethnic Place-Names by SaTScanR	218
8.4	Colocation Analysis of Two Types of Points.....	220
8.4.1	Spatial Weights Definition and Cross K-Function Analysis	220
8.4.2	Global Colocation Quotient (CLQ).....	221
8.4.3	Local Indicator of Colocation Quotient (LCLQ)	222
8.5	Case Study 8B: Detecting Colocation between Crime Incidents and Facilities	223
8.6	Spatial Cluster Analysis Based on Feature Values	226
8.6.1	Tests for Global Clustering Based on Feature Values	226

8.6.2	Tests for Local Clusters Based on Feature Values....	228
8.7	Spatial Regression	229
8.7.1	Spatial Lag Model and Spatial Error Model	229
8.7.2	Geographically Weighted Regression	230
8.8	Case Study 8C: Spatial Cluster and Regression Analyses of Homicide Patterns in Chicago.....	232
8.8.1	Spatial Cluster Analysis of Homicide Rates	233
8.8.2	Regression Analysis of Homicide Patterns.....	236
8.9	Summary.....	238
Chapter 9	Regionalization Methods and Application in Analysis of Cancer Data	241
9.1	The Small Population Problem and Regionalization.....	241
9.2	GIS-Automated Regionalization Methods	244
9.2.1	The Spatially Constrained Hierarchical Clustering (SCHC) Methods	245
9.2.2	The Spatially Constrained Clustering with Partitioning (SCCP) Methods.....	247
9.3	The Mixed-Level Regionalization (MLR) Method	247
9.3.1	Modified Peano Curve Algorithm (MPC)	248
9.3.2	Modified Scale-Space Clustering (MSSC)	249
9.3.3	Integrating MPC and MSSC.....	249
9.3.4	Mixed-Level Regionalization (MLR).....	250
9.4	Case Study 9: Constructing Geographical Areas for Mapping Cancer Rates in Louisiana.....	250
9.4.1	Implementing the SKATER, AZP, Max-P, SCHC and REDCAP Methods	251
9.4.2	Implementing the MLR Method	254
9.5	Summary.....	261
	Appendix 9: The Poisson-Based Regression Analysis.....	262

PART III Advanced Computational Methods and Applications

Chapter 10	System of Linear Equations and Application of the Garin– Lowry Model in Simulating Urban Population and Employment Patterns	267
10.1	System of Linear Equations.....	267
10.2	The Garin–Lowry Model.....	269
10.2.1	Basic vs. Nonbasic Economic Activities.....	269
10.2.2	The Model's Formulation.....	270
10.2.3	An Illustrative Example.....	272
10.3	Case Study 10: Simulating Population and Service Employment Distributions in a Hypothetical City	273

10.4	Discussion and Summary	280
	Appendix 10A: The Input–Output Model	281
	Appendix 10B: Solving a System of Nonlinear Equations	282
Chapter 11	Linear and Quadratic Programming and Applications in Examining Wasteful Commuting and Allocating Healthcare Providers.....	285
11.1	Linear Programming and the Simplex Algorithm	286
11.1.1	The LP Standard Form	286
11.1.2	The Simplex Algorithm	286
11.2	Case Study 11A: Measuring Wasteful Commuting in Columbus, Ohio.....	289
11.2.1	The Issue of Wasteful Commuting and Model Formulation	289
11.2.2	Data Preparation in ArcGIS.....	290
11.2.3	Measuring Wasteful Commuting with the WasteCommuteR Tool.....	293
11.3	Integer Programming and Location-Allocation Problems.....	295
11.3.1	General Forms and Solutions for Integer Programming	295
11.3.2	Location-Allocation Problems	296
11.4	Quadratic Programming and the Maximal Accessibility Equality Problem (MAEP)	299
11.5	Case Study 11B: Location-Allocation Analysis of Hospitals in Rural China	301
11.5.1	Data Preparation	302
11.5.2	Location Optimization for Site Selection.....	304
11.5.3	Capacity Optimization for Hospitals at Selected Sites	309
11.6	Summary.....	311
	Appendix 11: Hamilton’s Model on Wasteful Commuting.....	312
Chapter 12	Monte Carlo Method and Applications in Urban Population and Traffic Simulations	315
12.1	Monte Carlo Simulation Method.....	315
12.1.1	Introduction to Monte Carlo Simulation	315
12.1.2	Monte Carlo Applications in Spatial Analysis	316
12.2	Case Study 12A: Deriving Urban Population Density Functions in Uniform Area Unit in Chicago by Monte Carlo Simulation.....	318
12.3	Travel Demand Modeling	321
12.4	Case Study 12B: Monte Carlo–Based Traffic Simulation in Baton Rouge, Louisiana	325
12.5	Summary.....	333

Appendix 12: Improving Measurement of Wasteful Commuting by Monte Carlo Simulation.	334
Chapter 13 Agent-Based Model and Application in Crime Simulation	337
13.1 From Cellular Automata to Agent-Based Model.....	338
13.2 Simulating Crimes in the Agent-Based Model.....	340
13.2.1 Theoretical Foundation in Environmental Criminology	341
13.2.2 Components of ABM Framework for Crime Simulation	342
13.2.3 Integration of GIS Functionalities with Simulation ...	344
13.3 Implementing an ABM Crime Simulator with Improved Daily Routines	345
13.3.1 Resident Agent Movement and Risk Avoidance Behaviors.....	345
13.3.2 Offender Motivation, Awareness Space, and Risk Assessment.....	347
13.4 Case Study 13: Agent-Based Crime Simulation in Baton Rouge, Louisiana.....	350
13.4.1 Simulating Crimes in the Base Scenario	354
13.4.2 Testing the Hypotheses on Offender Behaviors	361
13.4.3 Testing the Effects of Police Patrol Strategies.....	362
13.5 Summary.....	364
Chapter 14 Spatiotemporal Big Data Analytics and Applications in Urban Studies	367
14.1 Using Taxi Trajectory Big Data in Urban Studies	367
14.1.1 Why Taxi Trajectory Big Data?.....	367
14.1.2 Taxi Trajectory Data Format	368
14.1.3 Application-Oriented Taxi Trajectory Data Queries...	370
14.2 Case Study 14A: Exploring Taxi Trajectory in ArcGIS	371
14.3 Processing Taxi Trajectory Big Data with XSTAR	375
14.3.1 Taxi Trajectory Data Index Structure in XSTAR	376
14.3.2 Data Processing Steps in XSTAR.....	378
14.3.3 Analyzing Taxi Trajectory Big Data with XSTAR...	379
14.4 Case Study 14B: Identifying High Traffic Corridors and Destinations in Shanghai	381
14.4.1 Taxi Trajectory Raw Data Processing in XSTAR	382
14.4.2 OD Analysis in XSTAR.....	385
14.4.3 Destination Analysis in XSTAR.....	386
14.5 Summary.....	388
References	391
Index	407
