Preface..... xiv

Acknowledgement xv

About the Authors xvi

List of Abbreviations..... xix

Introduction..... xx

Chapter 1 IoT Network 1

 1.1 Introduction 1

 1.1.1 Leading to the Internet of Things 1

 1.1.2 IoT Devices Utilisation 2

 1.1.3 Context for IoT network..... 3

 1.2 Machine to Machine Communication in IoT Network 5

 1.3 Resource Allocation and Energy Consumption..... 5

 1.4 IoT Protocols 7

 1.4.1 Overview of IoT Protocols 9

 1.4.2 Protocol Comparison..... 12

 1.4.3 Protocol Selection for IoT Application 14

 1.5 Addressing Challenges in Resource Allocation 16

 1.5.1 Protocol-Specific Challenges 17

 1.5.2 Emerging Protocols and Standards..... 18

 1.6 Ethical Considerations in IoT Resource Allocation 23

 1.6.1 Privacy Concerns 23

 1.6.2 Bias and Fairness..... 23

 1.6.3 Transparency and Accountability 23

 1.7 Energy Consumption in Resource Allocation in
 Machine-to-Machine Communication..... 24

 1.7.1 Key Factors Affecting Energy Consumption..... 25

 1.7.2 Energy-Efficient Resource Allocation Techniques..... 25

 1.8 Resources (Online Resources/Code Examples) 26

 1.9 Exercise 26

 1.10 Summary..... 26

 References 27

Chapter 2 Research Issues and Performance Analysis in IoT network..... 29

 2.1 Network Models 29

 2.1.1 Hierarchical Network Models 29

 2.1.2 Mesh Network Models 31

 2.1.3 Star Network Model 33

 2.1.4 Hybrid Network Models..... 34

 2.2 Multiple Gateway Placement in Wireless Networks 35

 2.2.1 Multiple Gateway Placement 35

2.3	Review of Multiple Gateway Placement Algorithms	37
2.4	Performance Metrics for Gateway Placement Problem.....	40
2.4.1	Analysis of Gateway Placement Algorithm	40
2.5	Link Scheduling in IoT Network.....	40
2.5.1	Machine-to-Machine Communication in IoT Network	47
2.5.2	Comparison of M2M and IoT	48
2.5.3	Comparative Study of Link Scheduling Algorithms	49
2.6	Research Gap Identification in IoT Network.....	53
2.7	Performance Metrics for Evaluation of Link scheduling	53
2.7.1	Analysis of Link Scheduling Algorithms	58
2.8	Resources (Online Resources/Code Examples)	58
2.9	Summary.....	58
2.10	Exercise	60
	References	61
Chapter 3	Distance Aware Gateway Placement in IoT Network	65
3.1	Introduction	65
3.1.1	Resource Allocation	65
3.1.2	Review of Resource Allocation Using Machine Learning.....	67
3.2	Cluster Formation in IoT Network	68
3.2.1	Clustering	68
3.2.2	Cluster Formation.....	70
3.2.3	Clustering System Model.....	71
3.3	Multihop Traffic in IoT Network.....	73
3.3.1	Review of Load Balanced Multihop Traffic Approaches in IoT Network	73
3.3.2	Throughput Based Load Balanced Multihop Traffic-Flow Weight Algorithm	74
3.4	Transmission Model	76
3.4.1	Mathematical Model.....	76
3.4.2	Position Based Approach with Euclidean Distance (ED)	77
3.4.3	Position Based Approach with Manhattan Distance (MD).....	77
3.4.4	Selection of Candidate Location	78
3.4.5	Calculate the Optimal Location of Specific Gateways	78
3.4.6	Calculate the Optimal Location of IoT Gateways	79
3.5	Multi-hop Traffic Gateway Placement Algorithm	79
3.5.1	System Flow	80
3.6	Performance Evaluation Parameters.....	80
3.6.1	Average Delay or Latency	80
3.6.2	Throughput	81

3.6.3	Average Load.....	81
3.6.4	Packet Delivery Rate (PDR)/Transmission Rate	82
3.6.5	Energy Consumption	82
3.6.6	Network Setup	82
3.6.7	Result and Discussion	84
3.7	Case Study	91
3.7.1	Smart City Case Study	91
3.7.2	Industrial IoT Case Study	99
3.8	Resources (Online Resources/Code Examples)	103
3.8.1	Books.....	103
3.8.2	Online Resources.....	104
3.8.3	Courses	104
3.9	Exercises.....	104
3.10	Summary.....	105
	References	105
Chapter 4	Machine Learning Traffic Prediction for Link Selection	107
4.1	Traffic Prediction for Link Selection.....	107
4.1.1	Traffic Prediction Approaches in IoT Network	107
4.1.2	IoT Data Traffic	108
4.1.3	Link Selection and Link Scheduling	110
4.2	System Model.....	110
4.2.1	Network Architecture	110
4.2.2	System Model in IoT Network.....	110
4.3	Research Model	112
4.3.1	Network Model.....	112
4.3.2	Fairness Based Resource Allocation Model.....	113
4.3.3	Traffic Prediction – Long Short Term Memory Model	114
4.3.4	Link Selection	115
4.3.5	Link Scheduling	116
4.4	LSTM Model	117
4.4.1	Long Short-Term Memory with Autoregressive Spectrum Analysis	117
4.4.2	AR Spectrum Analysis Based LSTM Model	118
4.5	Machine Learning Based Traffic Prediction Analysis	119
4.5.1	Prediction Using LSTM Model.....	124
4.6	Resources.....	127
4.6.1	Books.....	127
4.6.2	Courses	127
4.7	Exercise	127
4.8	Summary.....	128
	References	129

Chapter 5	Fairness-Driven Resource Allocation Optimisation in IoT Network	131
5.1	Introduction	131
5.2	Analytical Hierarchy Process (AHP)-Based Link Selection... 132	
5.2.1	AHP-Based Algorithm for Selection of Channels.... 132	
5.2.2	AHP Based System Model..... 133	
5.3	Dynamic Scheduling in Heterogeneous Gateways in IoT Network	135
5.4	Novel Machine Learning Model..... 137	
5.4.1	System Architecture	137
5.4.2	Prediction of Traffic on the Links	139
5.4.3	Selection of the Traffic on the Links	139
5.5	Model Parameter Evaluation	144
5.6	Resources (Online Resources/Code Examples)	153
5.6.1	Books..... 153	
5.6.2	Courses	153
5.7	Exercise	153
5.8	Summary..... 154	
	References	154
 Chapter 6	 Delay Aware Link Scheduling in IoT Network.....	 156
6.1	Introduction	156
6.1.1	Data Transfer Model..... 157	
6.2	End-to-End Delay and Challenges	158
6.3	Edge Sensor Network Model..... 160	
6.3.1	Resource Allocation in Heterogeneous IoT Network	160
6.4	Traffic for IoT Applications..... 162	
6.5	Traffic Prediction Model..... 164	
6.6	End-to-End Network Delay Model..... 165	
6.6.1	End-to-End Delay Model	166
6.6.2	Queue Model	167
6.7	Delay Optimisation Problem	168
6.7.1	Multihop Model..... 168	
6.8	Evaluation Parameterised Analysis..... 169	
6.8.1	Waiting Time	173
6.8.2	Turnaround Time	173
6.8.3	Throughput	173
6.9	Resources (Online Resources/Code Examples)	175
6.9.1	Books..... 175	
6.9.2	Courses	175
6.9.3	Exercise	176
6.10	Summary..... 176	
	References	176

Chapter 7	Energy Consumption Optimisation in IoT Network	178
7.1	Introduction	178
7.1.1	Energy Consumption Challenges in IoT Networks	179
7.1.2	Importance of Energy Optimisation for Sustainable IoT Deployment.....	180
7.2	Energy Consumption and IoT Network.....	182
7.3	Energy Monitoring and Measurement in IoT.....	183
7.3.1	Components of IoT-Based Energy Monitoring Systems.....	184
7.3.2	Advantages of IoT-Based Energy Monitoring Systems.....	184
7.3.3	System Model.....	184
7.3.4	Customised Energy Monitoring for Smart Cities.....	184
7.3.5	Strategic IoT Sensor Deployment	185
7.3.6	Integration with Smart Grid Technology.....	185
7.3.7	Data Preprocessing and Model Development	186
7.4	Network Protocols and Standards for Energy Efficiency.....	189
7.5	Energy Consumption Models	190
7.5.1	Device-Level Energy Models.....	190
7.5.2	Network-Level Energy Models	190
7.5.3	Application-Specific Energy Models	190
7.6	Energy Harvesting Technologies.....	190
7.6.1	Solar Energy Harvesting.....	190
7.6.2	Thermoelectric Energy Harvesting.....	191
7.6.3	Electromagnetic Energy Harvesting.....	191
7.7	Energy-Efficient Hardware Design	192
7.7.1	Energy-Efficient Communication Modules.....	193
7.7.2	Efficient Power Management Circuits	193
7.7.3	Low-Power Sensors and Microcontrollers	193
7.8	Resources (Online Resources/Code Examples)	193
7.8.1	Books.....	193
7.8.2	Courses	194
7.9	Exercise	194
7.10	Summary.....	194
	References	195
Chapter 8	Future Directions and Trends in IoT Network	197
8.1	Current Trends in Machine Learning and IoT.....	197
8.2	Potential Future Developments.....	198
8.2.1	5G Connectivity: A Game-Changer for IoT.....	199
8.2.2	Key Trends in AI and IoT Integration	199
8.3	Impact of Emerging Technologies.....	200

- 8.4 Research Gaps and Opportunities 201
 - 8.4.1 Research Gap..... 201
 - 8.4.2 Opportunities 202
- 8.5 Edge Computing 204
 - 8.5.1 Edge Computing Overview 204
 - 8.5.2 Edge Computing Architecture 204
 - 8.5.3 Impact on Resource Allocation and Latency..... 208
 - 8.5.4 Use Cases and Applications of Edge Computing in IoT 210
- 8.6 Fog Computing 211
 - 8.6.1 Architecture of Fog Computing 212
 - 8.6.2 Benefits and Challenges of Fog Computing in IoT 213
 - 8.6.3 Relationship between Fog Computing and Edge Computing..... 216
 - 8.6.4 Use Cases and Applications of Fog Computing..... 217
- 8.7 Security and Privacy 218
 - 8.7.1 Privacy Concerns and Data Protection Measures..... 220
 - 8.7.2 IoT Security Challenges 221
 - 8.7.3 Security and Privacy Best Practices for IoT..... 222
- 8.8 Resources (Online Resources/Code Examples) 225
 - 8.8.1 Books..... 225
 - 8.8.2 Courses 225
 - 8.8.3 Exercise 226
- 8.9 Summary..... 226
- References 227

Chapter 9 Practical Applications and Case Studies: Realising the Potential of IoT Resource Allocation 228

- 9.1 Addressing Common IoT Challenges with Case Study 228
 - 9.1.1 Scalability 228
 - 9.1.2 Heterogeneity 230
 - 9.1.3 Dynamic Environment..... 231
 - 9.1.4 Energy Constraints 233
 - 9.1.5 Security and Privacy 235
 - 9.1.6 Real-Time Requirements..... 236
 - 9.1.7 Interoperability 238
- 9.2 IoT Network Application..... 241
 - 9.2.1 Health Monitoring 241
 - 9.2.2 Industrial Automation..... 241
 - 9.2.3 Traffic Monitoring System 242
 - 9.2.4 Habitat Monitoring 242
 - 9.2.5 Environment Observation and Forecasting System (EOFS)..... 245
 - 9.2.6 Agriculture Monitoring System 246

9.3 Impact of the System246

9.4 Resources (Online Resources/Code Examples)247

9.4.1 Books.....247

9.4.2 Courses248

9.4.3 Exercise248

9.5 Summary.....248

References249
